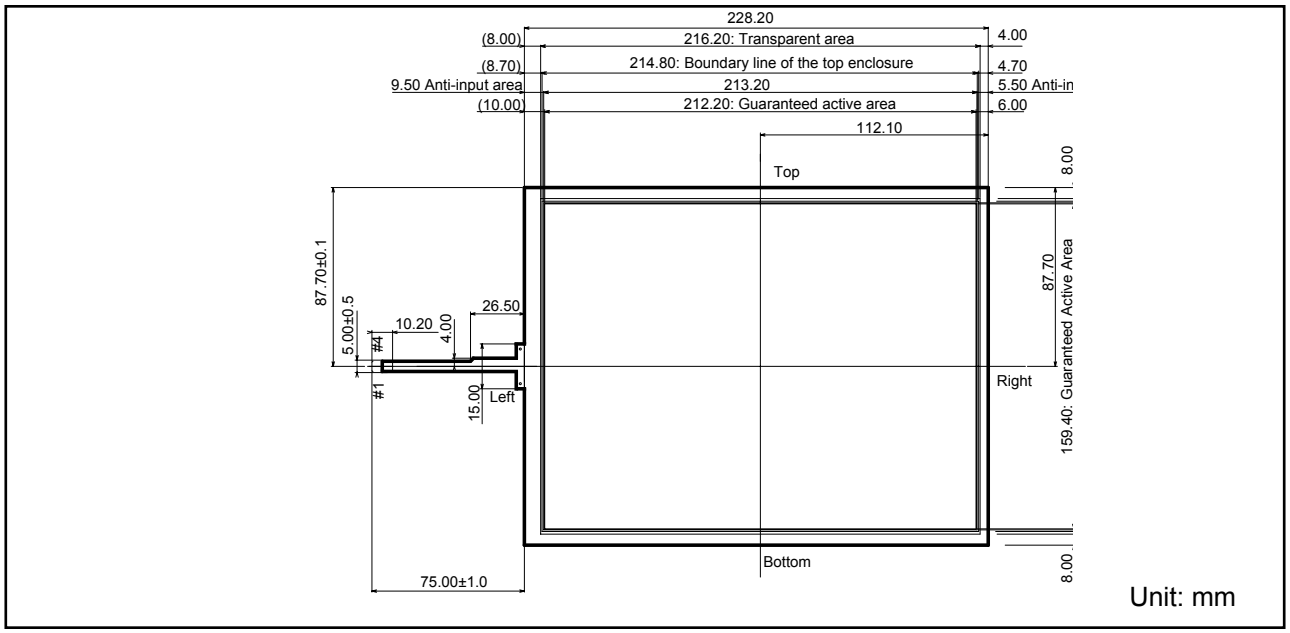
■ DIMENSION EXAMPLE (10.4” SHOWN)



■ DETAILED SPECIFICATION

■ 1.0 APPLICATION

This specification applies to the standard FID-554 seriesTouch Panel (Pen/Finger type).

■ 2.0 ADDITIONAL APPLICATIONS

Tech Bes N-25456 Control IC specification and N-25018 Touch Panel Specification are also applicable.

■ 3.0 DESCRIPTION AND BLOCK DIAGRAM

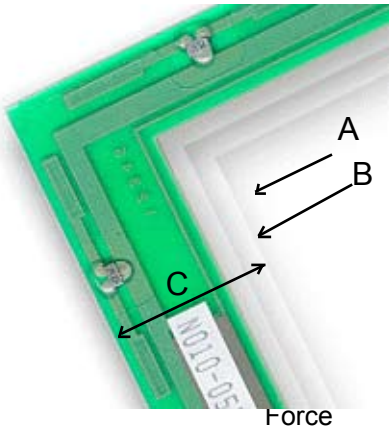
This panel in combination with a control IC chip is used to transfer the co-ordinates of the touched position to the host system (see block diagram above).

■ 4.0 DRAWING (*Please see the diagram above.)*

Definitions of the major dimensions indicated on this diagram:

Effective Input Area (A) Area guaranteed to meet all the characteristics detailed in this specification

Anti-input Area (C) An insulating area allowed to protect the touch panel from giving false readings when an enclosure touches the panel. (See fixing instructions)

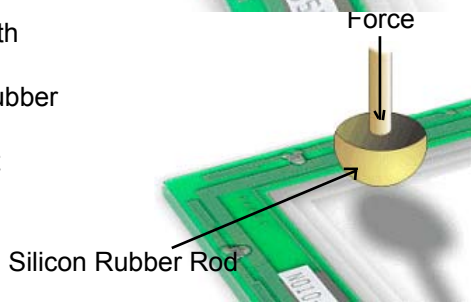


■ 5.0 CHARACTERISTICS

■ 5.1 MECHANICAL

Operating Force 0.05~0.49 N (5 ~ 50gF) Measured with a Silicon Measurement Rod R 8 (Round type 8mm) Silicon Rubber Hardness 60˚C

Hardness of Surface Pencil hardness 3H minimum against specification JIS K-5400



■ 5.2 OPTICAL

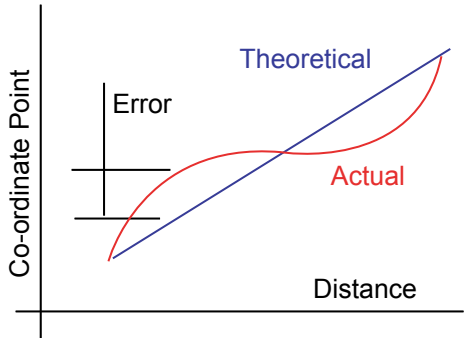
Transparency 78% min. measured in the effective input area to JIS K 7105 using a MURAKAMI SHIKISAI KENKYUSHO type IIR 100 meter.

Haze 5% type measured in the effective input area using a MURAKAMI SHIKISAI KENKYUSHO type IIR 100 meter with an Anti Glare treated surface.

■ 5.3 ELECTRICAL

Rated Voltage:	DC 7V max.
Resistance X axis:	300 to 850 Ω (at the connector)
Resistance Y axis:	100 to 600 Ω (at the connector)
Switch Bounce (Chattering):	20ms min when using the silicon rubber measurement rod
Insulation resistance:	10MΩ minimum at 25KV DC
Dielectric Strength:	No problems when at 25KV DC for 1 minute
Linearity:	2% max.

Note 1:
Measurement condition of linearity is corrected within the control IC. In general the location accuracy is specified as follows:
Actual co-ordinate point - theoretical co-ordinate point = location accuracy.
In general a 9 point co-ordinate calibration system is used to adjust the micro controller accuracy. (20 point can be used in combination with an EEPROM design).



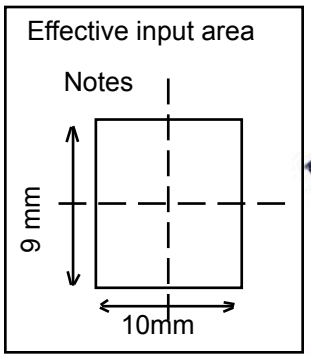
■ 5.4 ENVIRONMENTAL

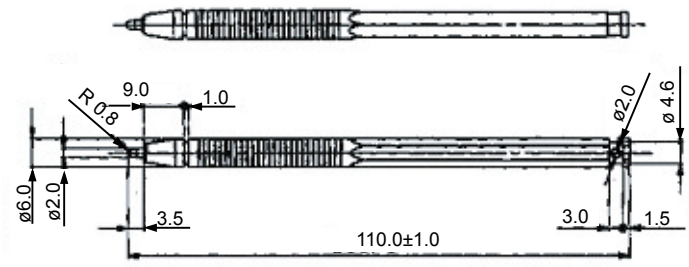
Operating Temperature (*):	-5˚C to 60˚C
Storage Temperature:	-20˚C to 70˚C
Operating Humidity:	20% to 85% RH with a Maximum wet bulb temperature of 38˚C
Storage Humidity:	10% to 90% RH with a Maximum wet bulb temperature of 38˚C
Chemical Resistance:	Coating with the following chemicals and storing at room temperature for 2 hours gives no problems. 10% NaCl-water solution, ethyl-acetate, ethyl-alcohol, toluene, methyl-ethyl-ketone
Low Air Pressure:	No issues down to 0.5 x Normal Air pressure

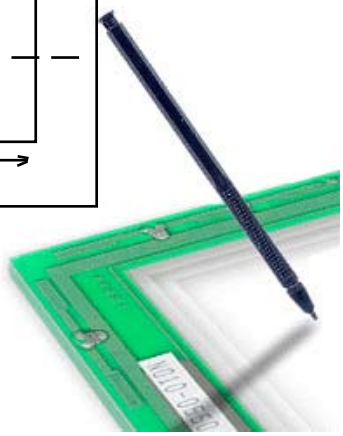
■ 5.5 PEN LIFE

Note taking life:	100,000 words minimum
Input life :	1,000,000 times minimum

Note 1:
Words are written in the notes area and the size of the word is 7.5mm x 6.75mm. A word is any Alphabet / Number / Mark. The pen is as shown below and applies a force of 250g.
A failure is judged to happen when the current consumption or insulation resistance or dielectric strength are not met as shown in 5.3. The location accuracy with 9 point calibration must be ±4.4 mm max.



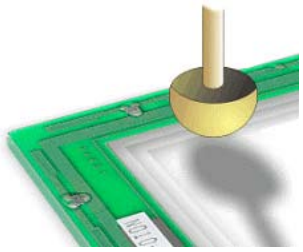




■ 5.6 FINGER LIFE

A finger is simulated by a silicon rubber plunger R8 (Round type 8mm size) hardness 60˚C at 200g at frequency 5Hz.

A failure is judged to happen when the current consumption or insulation resistance or dielectric strength are not met as shown in 5.3. The location accuracy with 9 point calibration must be ±4.4 mm max Operating force is 150g max.



■ 5.7 INFORMATION ON THE PANEL

Production year 99 00 etc.

9 0 1	The left side number shows production year, eg 1999
0 1 2	The left side number shows production year, eg 2000
[. . . . .]	The first dot after the space shows production month, eg May
[. . . . .]	The first dot after the space shows production month, eg June

■ 6 PACKAGING

■ 6.1 PACKING SPECIFICATION

Vibration:	10~55 Hz at 1 Octave per minute 10G 20 cycles with one side 0.75mm
Drop test:	60cm Drop 1 corner, 3 crease lines and 6 faces. 1 each 1 time
After the test no glass:	flaw or crack is seen, and no dent or scratch on the film. Also glass and film must not separate.

■ 6.1 PACKING DETAILS

Each touch panel is placed into a plastic bag and is held in place by a slit cut into the side of the cardboard. A second insertion piece is placed into the carton to again add stability. The qty is written on the side of the box. For example the N010-0554-T001 has 80 pieces per box.

Newton Ring		These must not be seen from Panel film side under a fluorescent lamp (3 wavelength type lamp). Not to be verified form glass side.	
Glass flaw		To be no flaw which is bigger than that shown in the following diagram. The number of flaws is not specified. 	

■ 8.0 GENERAL POINTS OF CAUTION

Touch panels are made of glass, so care must be taken in handling them. Do not stress, pile, bend, lift by the cable or put any stress on the film, for example moving by film face vacuum. In order to clean wring dry a cloth which has been emersed in a natural detergent. DO NOT use any organic solvent, acid or alkali solution. Watch the edge of the panel when cleaning, again for safety reasons.

■ 9.0 CONNECTION AND MOUNTING

The details below indicate the recommended mounting structure for panel and enclosure. The enclosure support to fix the touch panel must be over 1.0mm I width and must be outside the view (Transparent area). Also ensure that the enclosure does not cause miss input by touching the view area.
The following diagram shows that the enclosure edge must be between the View area and the guaranteed active area. Ensure space is allocated for the diodes, and we recommend that the material to fix the panel and enclosure is elastic. Special design would be required to stop water ingress. The corners of the touch panel are conductive so do not touch any metal parts after mounting.
