Preface

This document provides descriptions of the interfaces, pin assignments, and specifications of CYW20736E Bluetooth Low Energy (BLE) System-in-Package (SiP) module. It is intended for designers who are responsible for adding the CYW20736E module to wireless input devices including heart-rate monitors, blood pressure monitors, proximity sensors, temperature sensors, and battery monitors.

Cypress Part Numbering Scheme

Cypress is converting the acquired IoT part numbers from Broadcom to the Cypress part numbering scheme. Due to this conversion, there is no change in form, fit, or function as a result of offering the device with Cypress part number marking. The table provides Cypress ordering part number that matches an existing IoT part number.

Broadcom Part Number	Cypress Part Number
BCM20736	CYW20736
BCM20736E	CYW20736E

1. Introduction

1.1 Overview

The CYW20736E is a compact, highly integrated Bluetooth low energy (BLE) system-in-package (SiP) module. The CYW20736E SiP includes a 24 MHz clock and 512 Kb EEPROM, so only a minimal set of external components is needed to create a standalone BLE device.

The CYW20736E is designed to accelerate time to market. The Bluetooth stack and several application profiles are built into the module, allowing customers to focus on their core applications. To further reduce application development time, the CYW20736E includes integrated software support, with one-click installation of the complete environment and a one-click compile/build/link/load cycle. All this, coupled with an ultrasmall form factor and support for a wide voltage range, makes the CYW20736E well suited for virtually any Bluetooth Smart application.

Figure 1-2. External Reset Timing

1.2.1 32.768 kHz Oscillator

The CYW20736E includes a standard Pierce oscillator. The oscillator circuit includes a comparator with hysteresis on the output to create a single-ended digital output. The hysteresis eliminates chatter when the input is near the comparator threshold (~100 mV). The oscillator circuit can be designed for a 32 kHz or 32.768 kHz crystal oscillator, and can also be driven by an external clock input with a similar frequency. Characteristics for a 32 kHz oscillator are defined in [Table 1-1](#).

Table 1-1. 32 kHz Crystal Oscillator Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Output frequency	F_{oscout}	–	–	32.768	–	kHz
