

Please note that Cypress is an Infineon Technologies Company.

The document following this cover page is marked as “Cypress” document as this is the company that originally developed the product. Please note that Infineon will continue to offer the product to new and existing customers as part of the Infineon product portfolio.

Continuity of document content

The fact that Infineon offers the following product as part of the Infineon product portfolio does not lead to any changes to this document. Future revisions will occur when appropriate, and any changes will be set out on the document history page.

Continuity of ordering part numbers

Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

Bluetooth Low Energy System in Package (SiP) Module

The Cypress CYW20737L is a compact, highly integrated Bluetooth Low Energy (BLE) system-in-package (SiP) module. The device includes an embedded BLE antenna, 24 MHz clock, and 512 Kb EEPROM, so a minimal set of external components is needed to create a standalone BLE device.

The CYW20737L accelerates time to market. The Bluetooth stack and several application profiles are built into the module, allowing customers to focus on their core applications. To further reduce application development time, the CYW20737L includes integrated software support, with one-click installation of the complete environment and a one-click compile/build/link/load cycle. Coupled with an ultrasmall form factor and support for a wide voltage range, the CYW20737L is ideal for any BT Smart application.

Cypress Part Numbering Scheme

Cypress is converting the acquired IoT part numbers from Broadcom to the Cypress part numbering scheme. Due to this conversion, there is no change in form, fit, or function as a result of offering the device with Cypress part number marking. The table provides Cypress ordering part number that matches an existing IoT part number.

Table 1. Mapping Table for Part Number between Broadcom and Cypress

Broadcom Part Number	Cypress Part Number
BCM20737L	CYW20737L

Features

- ARM Cortex-M3 microcontroller unit (MCU)
- Embedded 512 Kb EEPROM
- Broadcom Serial Control (BSC), SPI, and UART interfaces
- FCC and CE compliant
- RoHS compliant, certified lead- and halogen-free
- Moisture Sensitivity Level (MSL) 3 compliant
- 6.5 mm × 6.5 mm × 1.2 mm Land Grid Array (LGA) 48-pin package
- Requires external 1.2V DC-DC for low power in sleep and active modes.

Applications

Profiles supported in ROM:

- Battery status
- Blood pressure monitor
- Find me
- Heart rate monitor
- Proximity
- Thermometer and Weight scale
- Time
- Blood glucose monitor
- Support for RSA security library
- Support for LE Audio
- Support for pairing using NFC tags

Additional profiles supported in RAM:

- Blood glucose monitor
- Temperature alarm
- Location
- Other custom profiles

IoT Resources

Cypress provides a wealth of data at <http://www.cypress.com/internet-things-iot> to help you to select the right IoT device for your design, and quickly and effectively integrate the device into your design. Cypress provides customer access to a wide range of information, including technical documentation, schematic diagrams, product bill of materials, PCB layout information, and software updates. Customers can acquire technical documentation and software from the Cypress Support Community website (<http://community.cypress.com/>).

1. Functional Description

1.1 External Reset

External reset timing for the CYW20737L is illustrated in Figure 2.

Figure 2. External Reset Timing

1.2 32.768 kHz Oscillator

The CYW20737L includes a standard Pierce oscillator. The oscillator circuit includes a comparator with hysteresis on the output to create a single-ended digital output. The hysteresis eliminates chatter when the input is near the comparator threshold (~100 mV). The oscillator circuit can be designed for a 32 kHz or 32.768 kHz crystal oscillator, and can also be driven by an external clock input with a similar frequency. Characteristics for a 32 kHz oscillator are defined in Table 2.

Table 2. 32 kHz Crystal Oscillator Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Output frequency	F_{oscout}	–	–	32.768	–	kHz
Frequency tolerance	F_{tol}	Crystal-dependent	–	100	–	ppm
Start-up time	T_{startup}	–	–	–	500	μs
Crystal drive level	P_{drv}	For crystal selection	0.5	–	–	μW
Crystal series resistance	R_{series}	For crystal selection	–	–	70	k Ω
Crystal shunt capacitance	C_{shunt}	For crystal selection	–	–	1.3	pF

1.3 External DC-DC Switcher Characteristics

The CYW20737L requires an external 1.2V DC switcher to operate its internal digital and RF circuits. A suitable low-power, low-noise switcher must be supplied for proper circuit operation. Digital and analog I/Os, as well as the internal EEPROM operation from the VBAT/VDDIO, can be from 1.62V to 3.63V. The recommended setting is 3V nominal voltage.

The following switcher, from Torex Semiconductor LTD, has been qualified and is recommended for all designs.

- XC9265B/D (see <http://www.torexsemi.com/products/detail.php?id=623>)

2. Pin Map and Signal Descriptions

The CYW20737L pin map is shown in [Figure 3](#).

Figure 3. CYW20737L (TOP View)

The signal name, type, and description of each pin in the CYW20737L is listed in [Table 3 on page 6](#). The symbols shown under I/O Type indicate pin directions (I/O = bidirectional, I = input, O = output) and the internal pull-up/pull-down characteristics (PU = weak internal pull-up resistor and PD = weak internal pull-down resistor), if any.

7. PCB Design and Manufacturing Recommendations

7.1 Pad and Solder Mask Opening Dimensions

CYW20737L pad and solder mask opening dimensions are defined in [Table 13](#).

Table 13. Pad and Solder Mask Dimensions

Pad Type	Pad Dimensions	Solder Mask Opening Dimensions	Unit
Type A	0.6 × 0.25	0.7 × 0.35	mm
Type B	0.55 × 0.3	0.65 × 0.4	
Type C	0.4 × 0.4	0.5 × 0.5	

7.2 PCB Layout Recommendations

The following layout recommendations are referenced to [Figure 8 on page 16](#).

- Connect to system ground from side D of the module (pins 13–22).
- The L-shaped ground plane is required for the embedded BLE antenna. Keep the GND continuous. Do not cut off the GND shape to accommodate trace routes.
- An L-shaped ground plane is required. If the L-shaped GND plane is located on the top layer of the PCB, do not place components on the ground plane. If this cannot be avoided, move the L-shaped ground plane to another layer.
- Antenna efficiency of 31–41% can be achieved based on the layout in [Figure 8 on page 16](#) and the dimensions listed below. Following these layout recommendations is expected to yield 50+ meters of usable range; deviating from these recommendations may reduce the range of the antenna.
 - D: 4.5 mm (typical)
 - G, H, S: 3 mm (typical)
 - L: 3 mm (minimum)
 - W: 0.4 mm (typical)
- Route signal traces out of the module from side C (between pins 27 and 30) or side D (between pins 16 and 19) of the module. Traces can be overlapped to avoid routing through the keep-out area.
- Do not route traces from side A or side B.
