

EVK-LEXI-R520

LEXI-R520 cellular evaluation kit

User guide

Abstract

This guide explains how to set up the EVK-LEXI-R520 evaluation kit to begin evaluating the u-blox ultra-small LEXI-R520 modules based on the latest u-blox UBX-R52 cellular chipset, supporting multi-band LTE-M / NB-IoT cellular radio access technology and u-blox SpotNow A-GPS technology.

1 Introduction

The EVK-LEXI-R520 kit is a powerful and easy-to-use tool that simplifies the evaluation of the u-blox LEXI-R520 multi-band LTE-M / NB-IoT cellular modules.

As shown in [Figure 1](#), the EVK-LEXI-R520 evaluation kit is formed by three boards:

- The EVB-WL3 contains the power supply and other peripherals for the cellular module.
- The cellular adapter board, ADP-LEXI-R520, contains the LEXI-R520 cellular module and other connectors.
- The GNSS adapter board, ADP-GNSS, contains the u-blox MAX-M10S GNSS module, the GNSS antenna connector and the USB connector for the GNSS module.

Figure 1: EVK-LEXI-R520 evaluation kit formed by three boards

- ✎ For more hardware details about the EVK-LEXI-R520 evaluation kit, see [section 5](#).
- ✎ See the LEXI-R520 data sheet [\[2\]](#) and the LEXI-R520 system integration manual [\[3\]](#) for features supported by LEXI-R520 modules.

2 Board quick start

2.1 Board setup

2.1.1 SIM and antenna

Figure 2: SIM and antenna set up

1. Insert a SIM card into **J300**, the SIM card holder.
2. Connect the cellular antenna provided with the EVK-LEXI-R520 evaluation kit box to **J106**, the cellular antenna SMA connector.
3. If positioning functionality is required:
 - a. For u-blox SpotNow A-GPS receiver functionalities, connect the GNSS antenna provided with the EVK-LEXI-R520 evaluation kit box to **J107**, the GNSS antenna SMA connector on ADP-LEXI-R520.
 - b. For u-blox MAX-M10 GNSS receiver functionalities, connect the GNSS antenna provided with the EVK-LEXI-R520 evaluation kit box to **J103**, the GNSS antenna SMA connector on ADP-GNSS, and keep the cellular GNSS detach switch **SW304** in “GNSS” position.

Place the GNSS / GPS antenna in a location with a good view of the sky.

2.1.2 Power supply

Figure 3: Power supply set up

1. Connect the AC/DC +12 V power supply adapter to **J400**, the 9 – 18 V power input connector; LED **DL401** light turns blue.
2. Provide a jumper socket on both **J404** and **J108**, the cellular VCC supply jumpers.
3. Turn **SW400**, the main power switch, to the “ON” position; LED **DL400** light turns green and the cellular module switches on.

2.1.3 Local connectivity

Figure 4: Local connectivity set up

For communication via the UART interfaces of the cellular module, the following connections are allowed and can be alternatively enabled in a mutually exclusive way (see [Table 1](#) for switches and jumper position and LED status):

- Connect a USB cable to **J501** mini-USB connector, so-called cellular USB main UART connector: the LED **DL501** light turns blue. When a USB cable is connected to this mini-USB connector, two COM ports are enabled in Windows: the main 8-wire UART interface of the cellular module is available over the first COM port opened by the driver, after the end of the module boot, once the module is switched on.
- Connect an RS232 cable to **J500** DB9 connector, so-called cellular RS232 main UART connector: the main 8-wire UART interface of the cellular module is available over RS232, after the end of the module boot, once the module is switched on.

Type of connections	SW401	SW403	LED
Access to the main UART interface over J501 (EVB-WL3)	ON BOARD	MINIUSB	DL403 DL501
Access to the main UART interface over J500 (EVB-WL3)	ON BOARD	DB9	DL405
Access to UART interface(s) over J104 (ADP-LEXI-R520)	B2B	Do not care	DL404

Table 1: Serial interface configuration

See the data sheet [\[2\]](#) and the +USIO AT command description in the AT commands manual [\[1\]](#) for the description and configuration of the USIO variants.

Run an AT terminal application (such as the u-blox m-center tool) selecting the AT port, with these settings:

Data rate	Data bits	Parity	Stop bits	Flow control
115200 bit/s	8	N	1	HW

See appendix [A](#) for how to download, configure and use the u-blox m-center AT terminal for Windows.

2.2 Switch off the board

To switch off the LEXI-R520 module in the EVK-LEXI-R520, send the +CPWROFF AT command.

-  Issue AT+CPWROFF command before switching off the main power supply of the EVK-LEXI-R520 by turning the **SW400** main power switch to the “OFF” position (see [Figure 3](#)), otherwise settings and configuration parameters may not be saved in the non-volatile memory of the cellular module.

3 Register to network

3.1 Enabling error result codes

Command sent by DTE (user)	DCE response (module)	Description
AT+CMEE=2	OK	Enable the cellular module to report verbose error result codes.

3.2 PIN code insertion (when required)

Command sent by DTE (user)	DCE response (module)	Description
AT+CPIN="8180"	OK	Enter the PIN code, if needed (enter the PIN of the SIM card – 8180 is an example).
AT+CLCK="SC",0,"8180"	OK	Unlock the PIN at power-on (the last parameter is the PIN of the SIM card – 8180 is an example).
AT+CLCK="SC",1,"8180"	OK	Lock the PIN at power-on (the last parameter is the PIN of the SIM card – 8180 is an example).

3.3 Registration on a cellular network

Command sent by DTE (user)	DCE response (module)	Description
AT+CREG?	+CREG: 0,1 OK	Verify the CS network registration.
AT+CEREG?	+CEREG: 0,1,"5684","03761b14",7 OK	Verify the EPS network registration.
AT+COPS=0	OK	Register the module on the network. The cellular module automatically registers itself on the cellular network. This command is necessary only if the auto-registration failed (AT+CREG? returns 0,0).
AT+COPS?	+COPS: 0,0,"I TIM",7 OK	Read the operator name and radio access technology (RAT).

4 Setting up data connection on Windows

This section describes how to set up a cellular packet data connection on Windows 10 using the operating system's TCP/IP stack and EVK-LEXI-R520. This is also referred to as a dial-up connection.

4.1 Install a new modem from the control panel

1. From **Control Panel**, select **Phone and Modem > Modems > Add**.

This opens the Add Hardware Wizard.

2. Tick "Don't detect my modem" checkbox. Click **Next**.

3. Select **Standard 33600 bps Modem**.
Click **Next**.

4. Select **COM** port for data communication and click **Next**. The modem will be installed on this COM port.

6. Now the new modem is visible in **Control Panel**, under **Phone and Modem > Modems**.

Any extra initialization AT command (e.g., to set a specific APN name) can be entered by selecting **Properties** and filling in **Advanced > Extra initialization commands** text box.

Now the module is ready and the connection can be configured.

The modem configuration can also be edited in **Device Manager**, by clicking on the modem name.

4.2 Configuring a new connection

1. From **Control Panel**, select **Network and Sharing Center** > **Set up a new connection or network**.

2. Click **Connect to the Internet** and then **Next**.

3. Select **Dial-up** and, if requested, the modem previously installed.

4. Enter the parameters for the dial-up connection:
 - The module telephone number: *99***1#
(Change, if using a PDP context different from 1)
 - The specific account information for the network operator
 - A name for the connection, e.g., "EVK-LEXI-R520 dial-up"

The packet data connection is now ready with EVK-LEXI-R520. Click **Connect**, then start a browser to check internet connectivity.

Consult the cellular network operator for username and password. Usually, they can remain empty.

5 EVK-LEXI-R520 hardware

5.1 EVK-LEXI-R520 block diagram and description

Figure 5 shows the main interfaces and internal connections of the EVK-LEXI-R520 evaluation kit:

Figure 5: EVK-LEXI-R520 block diagram

The **ADP-LEXI-R520** and **ADP-GNSS** are connected by male header board-to-board connectors on the bottom of the adapter boards and their corresponding female connectors on top of the **EVB-WL3**.

As illustrated in section 2.1.3 and summarized in Table 1, for communication via the UART interfaces of the cellular module, two options are allowed and can be enabled in a mutually exclusive way.

The USB interface of the cellular module (available for diagnostic purpose only) is available on the native USB connector (**J105**) mounted on the cellular adapter board.

Other LEXI-R520 peripherals are available on the dual-in-line male board-to-board connectors (**J103** and **J104**) provided on the top layer of the cellular adapter board.

The lower board (**EVB-WL3**) is also designed to be used with other u-blox cellular adapter boards. It contains additional switches, jumpers, connectors, LEDs and parts that may be only partially described in this document, because they are intended for use only with other u-blox cellular modules. It is recommended to leave any additional connector unconnected and any additional switch in its default configuration.

5.2 Switches, jumpers and buttons

Function	Description	Name	Board
Main power switch	Power on / off the whole evaluation kit	SW400	EVB-WL3
Cellular VCC	Jumper socket to provide the 3.8 V supply to the cellular VCC input	J404	EVB-WL3
		J108	ADP-LEXI-R520
Cellular power-on	Push button to switch on / off LEXI-R520 modules	SW302	EVB-WL3
Cellular reset	Push button to reset LEXI-R520 modules	SW303	EVB-WL3
Cellular UART detach	Slide switch to attach / detach cellular UART from USB / RS232 connectors	SW401	EVB-WL3
Cellular UART routing	Slide switch to select cellular main UART routing on USB or RS232 connector	SW403	EVB-WL3
Cellular GPIO detach	Slide switch to attach / detach the cellular GPIOs from peripherals: when detached, the signals are available only on DIL B2B connector on ADP-LEXI-R520 board	SW300	EVB-WL3
Cellular GNSS detach	Slide switch to attach / detach the cellular system to the GNSS module mounted on the ADP-GNSS: when detached, signals are available only on DIL B2B connector on ADP-LEXI-R520 board	SW304	EVB-WL3
GNSS BCKP	Slide switch to connect / disconnect backup battery to V_BCKP pin of the GNSS module mounted on the ADP-GNSS	SW204	EVB-WL3
GNSS Tx routing	3-pin header jumper to route and make accessible GNSS UART Tx over the USB connector on the ADP-GNSS or to use it as Tx data ready for the cellular module	J104	ADP-GNSS

Table 2: EVK-LEXI-R520 switches, jumpers and buttons description

5.3 LEDs

Function	Color	Description	LED #	Board
Main power	Blue	Power supply plugged in the 9 - 18 V power input	DL401	EVB-WL3
Cellular VCC	Green	Cellular module supplied; main power switch must be switched on	DL400	EVB-WL3
Cellular UART USB	Blue	USB cable plugged in J501 for UART access	DL501	EVB-WL3
Cellular USB (UART)	Red	Green light on when UART is routed to J501 Red light blinks at UART TX or RX data on J501	DL403	EVB-WL3
Cellular UART detach	Green	UART signals are available only on ADP-LEXI-R520	DL404	EVB-WL3
Cellular RS232 (UART)	Red	Green light on when UART is routed to J500 Red light blinks at UART TX or RX data on J500	DL405	EVB-WL3
Cellular RI indicator	Red	RI line turns ON (active low)	DS501	EVB-WL3
Cellular CTS indicator	Green	CTS line turns ON (active low)	DS500	EVB-WL3
Cellular GPIO1 indicator	Green	Green light on when cellular GPIO1 is high	DS107	EVB-WL3
Cellular GPIO2 indicator	Green	Green light on when cellular GPIO2 is high	DS105	EVB-WL3
Cellular GPIO3 indicator	Green	Green light on when cellular GPIO3 is high	DS109	EVB-WL3
Cellular GPIO4 indicator	Green	Green light on when cellular GPIO4 is high	DS103	EVB-WL3
Cellular native USB	Blue	USB cable plugged in J105 on ADP-LEXI-R520	DS100	ADP-LEXI-R520
GNSS VCC supply	Green	MAX-M10S GNSS module supply is turned on	DS118	ADP-GNSS
GNSS USB	Blue	USB cable plugged in J102 on ADP-GNSS	DS104	ADP-GNSS
GNSS time pulse	Green	MAX-M10S GNSS time pulse	DS121	ADP-GNSS
Cellular / GNSS I2C	Yellow	Cellular / GNSS module communication over the I2C interface	DS107	ADP-GNSS

Table 3: EVK-LEXI-R520 LEDs description

5.4 Connectors

Function	Description	Name	Board
9 - 18 V power input	Connector for the AC / DC power adapter of EVK AC: 100-240 V, 0.8 A, 50-60 Hz / DC: +12 V, 2.5 A  IEC 60417-5172 Class II equipment	J400	EVB-WL3
SIM card holder	SIM card holder (mini-SIM 2FF)	J300	EVB-WL3
Cellular USB (UART)	Mini-USB connector for the cellular UART interface converted as USB interface	J501	EVB-WL3
Cellular RS232 (UART)	DB9 connector for the cellular UART interface converted as RS232 interface	J500	EVB-WL3
GNSS backup battery	Backup battery socket for the GNSS module (under ADP-GNSS board)	BT200	EVB-WL3
GND	Ground terminals for the probe reference	J402, J403 J405, J406	EVB-WL3
Cellular antenna	SMA connector for the cellular antenna (ANT)	J106	ADP-LEXI-R520
GPS antenna	SMA connector for the GPS antenna to be connected to the GPS RF input of the LEXI-R520 module (ANT_GNSS)	J107	ADP-LEXI-R520
Cellular native USB	Mini-USB connector for the cellular native USB interface	J105	ADP-LEXI-R520
DIL B2B headers	Dual-in-line board-to-board connectors for cellular module interfaces	J103, J104	ADP-LEXI-R520
GNSS antenna	SMA connector for the GNSS antenna to be connected to the GNSS RF input of the MAX-M10S GNSS module (RF_IN)	J103	ADP-GNSS
GNSS USB	Mini-USB connector for the GNSS module UART interface converted as USB interface	J102	ADP-GNSS

Table 4: EVK-LEXI-R520 connectors description

 In the unlikely event of a failure in the internal protection circuitry, there is a risk of an explosion when charging a fully or a partially discharged battery. Replace the battery when it no longer has sufficient charge for unit operation. Check the battery before use if the device has not been used for an extended period.

 Risk of explosion if the battery is replaced with an incorrect type. Dispose battery according to rules!

5.5 EVK-LEXI-R520 pin out

Table 5 lists the interfaces of the LEXI-R520 modules, as routed up to the 42-pin dual-in-line board-to-board connectors (J103 and J104) available on the ADP-LEXI-R520 adapter board of the evaluation kit.

LEXI-R520 module				Connector				LEXI-R520 module				Connector

Table 6: Pin-out of the 42-pin dual-in-line board-to-board connectors (J103, J104)

 The pins / interfaces that are not supported by LEXI-R520 modules should be not driven by an external device. See the LEXI-R520 data sheet [\[2\]](#) and the LEXI-R520 system integration manual [\[3\]](#) to learn about the features supported by LEXI-R520 module.

5.6 Current consumption measurement

To measure the current consumption of LEXI-R520 modules, remove the jumper socket from the cellular VCC supply jumper **J108** on the ADP-LEXI-R520 board, as shown in [Figure 6](#).

Figure 6: Jumper socket to be removed for LEXI-R520 module's current consumption measurement

A suitable external digital multi-meter (as the Keysight 34465A, 34410A or 34411A) can be used for current consumption measurements: in this example, the 3.8 V supply circuit on the EVB-WL3 will supply the cellular module, with the digital multi-meter placed in series as illustrated in [Figure 7](#).

Figure 7: Setup for cellular module's current consumption measurement using a current meter

Alternatively, a suitable external DC power supply with dynamic current measurement capabilities (e.g., the portable and cheap Qoitech Otii Arc, or the more accurate Keysight N6705B, or the models designed for mobile communications Keysight 66319B/D or 66321B/D) can be used, acting also as 3.8 V supply source for the cellular module mounted on the adapter board, as illustrated in [Figure 8](#).

Figure 8: Setup for cellular module's current consumption measurement using a DC power analyzer

Appendix

A Setting up AT terminal communication

The u-blox m-center cellular module evaluation tool is a powerful platform for evaluating, configuring and testing u-blox cellular products. m-center includes an AT commands terminal for communication with the device and can be downloaded for free from <https://www.u-blox.com/en/product/m-center>. For m-center example scripts, visit <https://github.com/u-blox/m-center>.

1. Follow the board setup instructions in section 2 to provide all the required connections and switching on the cellular module.
2. Run the u-blox m-center tool: after the m-center start-up, the **Home** page appears, as shown in Figure 9.

Figure 9: m-center Home page

3. On the **Home** page, set up the AT COM port with setting values below:
 - Data rate: 115200 bit/s
 - Data bits: 8
 - Parity: N
 - Stop bits: 1
 - Flow control: HW
4. Check in the Windows Device Manager to find out which specific COM port is being used by the EVK-LEXI-R520.
5. Enable the connection to u-blox cellular module by clicking on the **Connect** button.
6. Retrieve the module and network information by clicking on the **Get info** button.
7. The module information is retrieved and displayed on the **Home** page.

8. Click on the **AT Terminal** button, found at the upper right of the **Home** page. A new window opens, and the AT command terminal is now ready for communication with the EVK-LEXI-R520.

Figure 10: AT terminal window

For more information on using the u-blox m-center, press the **F1** key to open the m-center help window on the computer.

For the complete list of the AT commands supported by the modules and their syntax, see the AT commands manual [\[1\]](#).

B Glossary

Abbreviation	Definition
AC	Alternating current
ADC	Analog to Digital Converter
ADP	Adapter Board
APN	Access Point Name
AT	AT Command Interpreter Software Subsystem, or attention
A-GPS	Assisted Global Positioning System
B2B	Board-To-Board
CTS	Clear To Send
DC	Direct current
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DIL	Dual In Line
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTR	Data Terminal Ready
EVB	Evaluation Board
EVK	Evaluation Kit
GND	Ground
GNSS	Global Navigation Satellite System
GPIO	General Purpose Input Output
HW	Hardware
I2C	Inter-Integrated Circuit
IoT	Internet of Things
IP	Internet Protocol
LED	Light Emitting Diode
LTE	Long Term Evolution
MCU	Micro-Controller Unit
NB	Narrow Band
PDP	Packet Data Protocol
PSU	Power Supply Unit
RAT	Radio Access Technology
RF	Radio Frequency
RI	Ring Indicator
RTS	Request To Send
Rx	Receiver
SIM	Subscriber Identity Module
SMA	SubMiniature version A
TCP	Transfer Control Protocol
Tx	Transmitter
UART	Universal Asynchronous Receiver-Transmitter serial interface
USB	Universal Serial Bus

C Conformity notice

The equipment is intended for indoor usage. It is the user's duty to verify if further restrictions apply, such as in airplanes, hospitals, or hazardous locations (petrol stations, refineries...). Any changes or modification made to this equipment will void its compliance to the safety requirements.

Maintenance, inspections and/or repairs of the EVK-LEXI-R520 shall be performed by u-blox AG.
