

Compact Fans for AC and DC

Catalogue 2008

ebmpapst

Trendsetter in Fan Technology

*Uncompromising quality
made by ebm-papst*

Among the best.

Trendsetting with innovative technologies. Listening to customers' needs. Developing new ideas to meet requirements and realising them with pioneering spirit. This philosophy has made ebm-papst the technological leader in the world of fans.

A brand which has very few alternatives because every fan is a product of decades of application know-how gained from large-volume production and because we are in a position to produce highly efficient quality products. Our intelligent solutions for electronic cooling ensure that you are one step ahead of competitors thanks to innovative, reliable top quality technology which is cost-favorable and in line with market requirements. And if required, tailor-made right down to the last detail. In other words if you need fans which don't actually exist, contact us.

Insist on ebm-papst.

Company profile: ebm-papst

The entire scope of ventilation and drive technology: this is the world of ebm-papst. More than 9,800 people – in Germany and throughout the world – develop, produce and sell our motors and fans. Our global presence and our unique range of products based on a quality standard that surpasses every other have made us what we are: world market leader in motors and fans. Expertly knowing what our customers need and incessantly striving to arrive at the perfect application solution for a wide variety of different industries is what determines our daily work. Those who know us know the high standards we apply to our work and know our creed: to be as close to our customers as possible and to simply be the best in terms of innovation and reliability.

Our location in St. Georgen

*Left:
Our headquarters in Mulfingen
Right:
Our location in Landshut*

Our history – Our drive

Rooted in ebm, PAPST and mvl, the three leading innovators in the development and production of motors and fans, ebm-papst has established itself as the world market leader. Now as ever, our legendary inventive spirit shines through in products that set standards in many segments of industry worldwide. We are proud to say that despite difficult competition, our performance has always been exemplary and outstanding – in business, in our personal relationship with our customers, and of course with respect to technology and engineering. For decades, we have contributed to the world of air technology and drive engineering with small revolutions and large milestones.

To maintain this advantage in skills and knowledge to get maximum quality and thus the highest degree of customer satisfaction, our employees around the world put their passion and dedication to work for you.

Passionately involved in R&D

Our catalogues just list the results of our incessant efforts in R&D: products of highest quality and reliability. After all, it is our passion to constantly try something new and improve what we have. In doing so, we take advantage of the latest development methods and state-of-the-art technology and invest quite heavily in R&D facilities. Best of all, though, we rely on excellently trained and skilled engineers and technicians to be at your service in R&D and Sales & Distribution.

Producing and safeguarding high-quality products and services

This is our promise without any compromise. Whether produced in one of our five factories in Germany or one of our eleven international production sites, our products always have the same high level of quality. This quality control is something you can definitely rely on! And this across all levels of production and throughout all processes: consulting customers, development, material selection through to picking certified, choice suppliers and on to the production of parts and final delivery. On top of this, our products have to pass the most rigorous tests under all realistic operating conditions: continuous stress test, salt spray test, vibration test, or precision noise measuring, just to mention a few. And the product gets clearance for serial production only after all the desired characteristics have been deter-

mined to be just right.

Environmental care is another priority with ebm-papst. This is why we have developed our product line in EC technology, which makes for very low power consumption. Due to our manufacturing philosophy, there is absolute focus on environmental care in production, recycling, waste and waste water disposal.

Global Domestic

In order to be specialist for customised solutions throughout the world, you need strong partners. Global Domestic – i.e. being present all over the world and being a national company in each individual country – is how we have established ourselves in all important markets on this globe with our successful subsidiaries. And so you will always find ebm-papst close to home, speaking your language, and knowing the demands of your markets. Besides, our worldwide production alliance serves as a basis for competitive pricing. Our global services and logistic outlets, i.e. IT networking, safeguard short reaction times and just-in-time delivery.

All our efforts are documented in a comprehensive quality management system, both for products and services. Being certified as complying with the tough requirements of the international standards DIN EN ISO 9001, ISO/TS 16949-2 and of standard DIN EN ISO 14001 is just one seal of approval we have received for our unceasing efforts to provide only the best quality products and services.

Know-how and technology

Drive know-how

For the past 60 years all conceivable types and applications of drive technology have played an essential role at ebm-papst. A commitment that is the foundation for the development of optimum drive solutions – regardless of the type of fan and its usage. DC fans are generally equipped with electronically commutated motors; in order to save as much space as possible commutation electronic components are integrated in the hub of the fan. Our AC fans are mostly driven by shaded-pole or capacitor motors based on the external rotor principle. In the 3900 and 9900 range of particularly slim fans internal rotor motors are used.

Low noise performance

Our aerodynamically optimised design and high mechanical precision produces outstanding noise properties in series production. So-called “soft” commutation electronics of the DC fans ensure an excellent noise performance. By avoiding steep switching ramps when the individual coils are switched, this reduces the structure-borne noise from the motor. Computer-aided measurements performed in the most modern sound measuring chamber are conducted on each fan model from the very beginning.

Long service life

The bearing system plays a vital role both in the long life time and quietness of equipment fans. The SINTEC compact bearing provides most of the equipment fans with a proven bearing system. Constant low noise during the entire operating time and considerably lower shock sensitivity are the outstanding features of this bearing technology. Also, with regard to temperature endurance, Sintec compact bearings can be used without problems in most applications. Despite the slightly higher noise and shock sensitivity of ball bearings, this bearing technology should be given preference when exposed to extreme thermal and adverse application conditions (e.g. extreme environmental conditions, critical installation position, etc.). The service life data provided in this catalogue is based on extensive service life tests and mathematically / scientifically proven service life calculations. Our product descriptions are continuously updated with all relevant data obtained from long-term tests.

Streamline: Aerodynamics

With the aid of the most modern computer programs, we are able to optimise the fan impellers and the inner shape of the housing. Air output and available motor performance are exactly matched with the size of fan. This guarantees the low noise that is typical for ebm-papst, even at high back pressures.

Sturdy construction – in metal or plastic

Fans of metal construction: Sturdy and indestructible. The housing is made of an aluminium alloy whereas the metal surfaces that are subject to corrosion are permanently protected by a black, impact- and abrasion resistant electrophoretic baked enamel. This particular version is highly recyclable. Fans with fibreglass reinforced plastic housing and impeller: Excellent stability and low weight distinguish this highly efficient fan concept. The metal housing and plastic impeller combine the advantages of both types of design.

Product images

The dimensioned drawings and product photos that appear in the catalog are for orientation purposes and may differ in some details from the actual product design.

Product liability

Motors and fans from ebm-papst are components; as such, their function is determined in the customer unit.

Safety all inclusive

It goes without saying that all ebm-papst fans conform to the approval requirements of the VDE (Association of German Electrical Engineers) and the standards and regulations of UL and CSA. All fans conform to the European Standard EN 60335-1 or EN 60950 plus those of the UL (Underwriter Laboratories) and CSA (Canadian Standards Association).

With few exceptions, our DC fans are designed to meet the requirements of protection class 3 / protection class voltage. ACmaxx fans are protection class 2 / AC fans protection class 1. ebm-papst fans meet the highest requirements of electrical safety. Depending on the type, they are either impedance protected or equipped with a temperature safety switch, a scheme to prevent locked rotor, alarm function or have speed monitoring and speed control.

Quality in detail

It is the seemingly trivial that makes the difference when a product is labelled 'made by ebm-papst': consistent maintenance of development and construction specifications; target-oriented design; and assured quality across the entire process chain are the reasons why running times of over 150,000 hours are not unusual. The no-compromise ebm-papst quality assurance spans over all process levels – from the choice of materials and the use of carefully selected, certified suppliers, from the production of parts up to final assembly. The sum of all these apparently minor details results in ventilation products with superior lifetimes and reliability.

Tailor-made to Meet Your Special Requirements

Practice-oriented: Fans – specified and intelligent

ebm-papst has always developed customer-specific intelligent fans which meet the exact requirements of the application. We provide a wide range of standard fan types, in many sizes and designs; with intelligent motor features, monitoring and control functions as well as special constructions for use under extreme conditions. They are all based on the standard type fan which you will find in this catalogue. Special fan types for your application can be produced in economical batch sizes. Our expert engineers will assist you in selecting the right configuration.

Innovation at its best:

Vario-Pro® with “inside intelligence”. Its programmed intelligence thanks to customer-specific configured software modules makes the cooling of electronics even more economical and flexible. For example, temperature-dependent speed profiles are possible with a number of freely selectable interpolation points. External speed settings and a variety of combinable alarm and tachometer functions can also be programmed. The digital motor management achieves high precision of control functions.

Higher protection class for every type of application

ebm-papst provides on request, a variety of fan series which conform to the requirements of Protection Class IP 54: Their stator and all electrical components are fully encapsulated. Stainless steel ball bearings can be used for operation in particularly aggressive media and use under extreme environmental conditions, thus providing additional safety.

Virtually everything is possible

Regardless of your cooling and ventilation tasks, we develop the right solution and what is more, the most economical one. Based on the fans listed in this catalogue, well over 4000 different versions are available.

Temperature-controlled fans

Fans with temperature-controlled speed have particularly quiet cooling characteristics. Thanks to IC technology, they adapt their speed to the current cooling requirements which results in a drastic reduction of noise in most operating modes. A temperature sensor provides the fan with thermal information: Either externally via a single lead or integrated into the hub of the fan.

Speed setting via interfaces

With a wide range of DC fans with separate control input, ebm-papst provides an alternative to the NTC controlled types of fans. They are especially suitable for systems and units which already have standard interfaces for varying speed via internal switching and control circuits. The main applications are units which demand load-dependent individual speed profiles or systems with stand-by minimum cooling requirements and varied speed increase at varying power peaks.

"Electronic tacho" thanks to sensor signal

You wish to be informed about the current fan speed at all times? ebm-papst has fans with an integrated "electronic tacho" which registers the actual value of the fan speed. Via an integrated sensor, the fan generates speed-dependent signals which can be directly utilised. Depending on the number of poles of the motor (2, 4 or 6 pole), 1, 2 or 3 pulses per revolution are generated.

Alarm signal for more safety

If your application requires monitored fan operation in addition to speed monitoring, ebm-papst also provides a multitude of varying alarm signals. Depending on the type of fan in question, the signal is either static, already evaluated or interface-compatible. The alarm signal output provides reliable long term monitoring and status signal when critical operating conditions evolve.

TURBOFAN

The DC fans with the 3-phase EC motor technology for exact speed control and high power margin. The drive and control electronics of the TD motors is pre-wired and already integrated in the fans.

Types of Fans and their Function

Axial fans:

High air flow with medium to relatively high pressure build-up

The air flow in axial fans, whose blower wheel is similar to that of a propeller, is conducted to a great extent in parallel to the axis of rotation, in other words in the axial direction. Axial fans with free air delivery at zero static pressure have the lowest power input that rises with increasing counterpressure. Axial fans for the cooling of electronic equipment are mostly equipped with external housing and an electric motor integrated into the fan hub. This compact construction allows space-saving accommodation of all devices; the flange is equipped with mounting holes.

Diagonal fans:

High flow rate at relatively high pressure

At first glance diagonal fans only differ slightly from axial fans. Intake is axial whereas exhaust is diagonal. Due to the conical shape of the wheel and housing the air is pressurised higher. In direct comparison with axial fans of the same size and comparable performance, these fans are distinguished by the lower operating noise.

Radial fans:

Limited flow rate at high pressure

Many of the cooling problems that occur can be optimally solved by axial and/or diagonal fans. If for example the required cooling air has to be conducted round an angle of 90° or if high pressure is necessary, radial fans are more effective. For your application, ebm-papst offers not only complete radial fans but also motor/blower wheel combinations without external housing.

Cross flow blower:

High flow rate at low pressure

Cross flow blowers are used above all, for large-surface air flow in appliances. The air flows through the blade roller twice in the radial direction: At the suction point from the outside to the inside and at the exhaust point from the inside to the outside. Whirls form in the roller due to the vanes which guarantee a steady flow of air through the blower wheel.

Selecting the Correct Fan

1. Dissipated heat

A large amount of the energy consumed by electrical and electronic devices is converted into heat. In selecting the correct fan, therefore, it is important to determine the dissipated heat that must be removed. The electrical power consumption of the unit to be cooled, often represents a suitable value for this purpose.

2. Permissible temperature rise

The air flow which the selected fan is required to generate, is determined by the dissipated heat and the permissible rise (ΔT) of the cooling air flow (from entry to exit of the device to be cooled). The max. allowable ΔT depends greatly on the temperature sensitivity of the individual device components. $\Delta T = 5\text{K}$ means e.g. that the average air flow leaving the device to be cooled may only be 5°C warmer than the ambient temperature (a large volume of air is required for this purpose). A lower air flow rate is sufficient if a higher temperature difference (e.g. $\Delta T = 20\text{K}$), can be tolerated.

3. Required cooling air flow

- In the below diagram a horizontal line is drawn from the dissipated heat to intersect with the selected ΔT line.

- Read down from this point to obtain the required value for the cooling air flow.

Diagram-formula:

$$\dot{V} [\text{m}^3/\text{h}] \approx 3 \cdot \frac{P_v [\text{W}]}{\Delta T [\text{K}]}$$

4. Optimum operating range

The required fan, however, must also be able to deliver a suitable static pressure Δp_f , in order to force the cooling air through the appliance. A fan must therefore be selected that provides the required air flow performance within its optimum operating range (see also the performance curves under technical data).

5. Fan selection

If the requirements of an application are fulfilled by more than one fan, the noise level, space requirements, economy and ambient conditions will assist in making the final choice.

Fan installation

Information on installation

When a fan is operated for the first time in an application, the user may have noticed that the flow rate in the appliance was lower than expected. What is the reason for this?

- The values stated in this catalogue were determined under optimum, constant and comparable measurement conditions.
- Ideal mounting conditions under which free air intake and exhaust are present is seldom feasible in practice. Quite frequently the fans must be mounted in the proximity of other components or cabinet panels. As a consequence, the intake and exhaust currents may be restricted causing the air flow to diminish and the noise level to increase. Fans are particularly sensitive to obstructions which are positioned directly in front of the output cross section as they often cause an increase in tonal noise.

Our advice: The distance between the fan and adjacent components should be at least equal to the mounting depth of the fan.

Intake or exhaust side installation

Under ideal conditions, the operating point is represented as the intersection between the characteristic fan and device curves, regardless of whether the fan is positioned at the air intake or exhaust side of the device. In addition to ensuring the required flow rate, several additional aspects must be considered for determining an appropriate fan concept. The intake air currents of a fan are mainly laminar, comprising nearly the entire suction area. By contrast, the exhaust air of a fan is generally turbulent, while it flows on a preferred direction, e.g. axial for an axial fan. The turbulences of the exhaust intensify the heat transfer from components within the air currents, so that mounting the fan at the air intake side of the device is recommended for cooling and heating. Mounting the fan at the device intake is also advantageous because the fan will not be subjected to the dissipation heat of the device. Therefore, it operates at low ambient temperatures and has a higher life expectancy.

Accident prevention

The turning rotor and the high speeds that are sometimes involved mean that our fan products carry an inherent risk of injury. They may only be operated after correct installation and with suitable protective facilities (e.g. with a guard grille). More information can be found in the internet at:

www.ebmpapst.com/safety

Life Service

Fans in an endurance test cabinet at ebm-papst St. Georgen. 1500 fans are operated in temperature cabinets until they fail.

Service life data from ebm-papst St. Georgen

Our fans catalogue give three different values for the service life of each product. The first column usually states the service life L_{10} at 40°C. the second column usually states the service life L_{10} at T_{max} . Exceptions are marked in the column headings. The third column states the new value , life expectancy $L_{10\Delta}$ (40°C).

Service life L_{10} (40°C) and L_{10} (T_{max})

The values given in the first two columns have been derived from intensive, internal service life endurance tests, in which our products are operated in various positions at 40°C and 70°C until they fail. A fan is deemed to have failed when it deviates from its defined airflow and speed values, or when the operating noise becomes noticeable. Such tests can take several years before a representative number of failures have been registered, and even today, some fans are still in the process of endurance testing, even though they began tests in the 1980s. These fans are proof of the legendary reliability of fans from the Black Forest.

Test results are presented in a diagram and the service life of the product L_{10} at the temperature tested is determined on the basis of the Weibull distribution.

These tests have given us years of experience of the way various design parameters and temperatures can affect the service life of a product. Service life at various temperatures data for new products can be stated with a very high degree of precision on the basis of tests, product specifications and of commonalities in the design of the product.

Noise	Noise	Sinter-Sleeve Bearings	Ball Bearings	Power input	Nominal Speed	Temperature Range	Service life L_{10} (20°C)	Service life L_{10} (60°C)	Product Life expectancy $L_{10\Delta}(40^\circ\text{C})$	Cure

5	< 3	■	□ ■	0.2	6 000	-10...+70	45 000 / 14 000	45 000	45 000	1

Example of the service life figures on the page of the catalogue.

Bathtub curve and Weibull distribution.

Example of the influence of factors from various manufacturers on the expected service life.

Definitions

Nominal Voltage (Volts)

The voltage at which the nominal values (the tabular values listed in this catalogue) were determined. The fan operation for DC fans is not limited to the nominal voltage. Fan speed and fan performance can vary according to the permissible voltage range that is specified on the nameplate of each fan.

Frequency (Hz)

PAPST AC fans are made for operating frequencies of 50 Hz or 60 Hz. Their technical data alter accordingly.

Volumetric Flow Rate (m^3/h)

The air flow performance of the fan in free air operation, i.e. the fan blows into the free space without static pressure.

Fan Curves

The fan curves are determined in accordance with DIN 24 163 specifications on a dual-chamber test stand with intake-side measurement. This measurement technique closely approximates the operating conditions experienced in typical applications for fans and yields realistic performance curves. The curves apply to an air density of $\rho = 1.2 \text{ kg/m}^3$, corresponding to an air pressure of 1013 mbar at 20 °C. Variations in air

density affect pressure generation but not the flow rate. The pressure generated at other air densities may be estimated with the formula $\Delta p_2 = \Delta p_1 (\rho_2/\rho_1)$.

The nominal speed values, airflow and power input listed in the table were measured in free air operation with horizontal shaft at an ambient temperature of 20 +5 °C, air density $\rho = 1.2 \text{ kg/m}^3$ after a warm-up period of 5 min.

Optimum Application

During operation, fans are required to produce an airflow with a simultaneous increase of pressure. These operating conditions are described in the section "Optimum Operating Range". The optimum operating range is therefore always indicated in this catalogue in the shaded area. In this range the fans operate best with respect to efficiency and noise level. Within this optimum operating range the noise level only fluctuates insignificantly.

Noise (dB(A), Bel)

1. Noise Pressure Level – dB(A)

Noise ratings of the fan in free air operation, i.e. at maximum flow rate.

2. Sound Power Level – Bel

Extent of the overall sound radiation of the fan. The sound power level is determined in the optimum operating range.

Sintec® Sleeve Bearings

A particularly efficient bearing system with excellent qualities:

- Very precise, large sintered bearings
- Low running noise
- High service life expectancy
- Insensitive to shock and vibration

Subject to technical alterations.

Our products are not designed for use in the aerospace industry!

German and international patents, registered designs and utility models.

ebm-papst, PAPST, Vario-Pro, SINTEC, TURBOFAN and VARIO-FAN are trademarks of ebm-papst St. Georgen GmbH & Co.KG. and are registered in many countries of the world.

Ball Bearings

Precision ball bearings for particularly high ambient temperatures and high service life expectancy.

Power Input (Watt)

Input performance of the fan motor when operating at nominal voltage.

Temperature Range (°C)

The permissible ambient temperature range within which the fan can be expected to run continuously.

Service Life [h]

Service life L_{10} at 40°C and T_{\max}

Standard figures for service life at ebm-papst. These two temperatures are based on intensive, internal endurance tests and on the experience more than 60 years developing fans.

Life expectancy $L_{10,\Delta}$ (40°C)

Figures orientated around the calculation methods employed by other fan manufacturers. Data based on the internal expected service life at 70°C, optimistically extrapolated to 40°C.

Unit conversion

Air Flow

$$1\text{cfm} = 1,7 \text{ m}^3/\text{h}$$

DC Fans

Technical Information

Range of fans

Users of ebm-papst fans have the widest range of DC axial fans at their disposal: From 25 mm to 280 mm in size. Every single type of fan can be optimally integrated in the respective appliance concept. The highly economic brushless motor technology of these fans provides a unique variety of intelligent innovations that can be realised today at prices that would have been unthinkable just a few years ago.

Electronic protection against reverse polarity
ebm-papst DC fans have electronically commutated drives with electronic protection against reverse polarity. The electronics are conveniently located in the fan hub.

Product life expectancy

A distinctive feature of DC fan technology is the convincingly high product life expectancy. Thanks to the excellent efficiency of the brushless drives, the thermal load of the bearings is reduced thus considerably increasing the life expectancy of the fans.

Protection Class

DC fans with sleeve and ball bearings are powered by Class E insulated motors. All ebm-papst fans conform to the requirements of Protection Class IP 20. Fans conforming to IP 54 and special protection classes are also available.

Supply voltage

The supply voltage of ebm-papst DC fans can be varied thus the airflow can be matched optimally to the cooling requirements and noise reduced to a minimum. ebm-papst DC fans can be driven with voltages that are reduced as much as 50 % or increased by 25 % of their nominal voltage (see voltage range in the tables containing technical data).

Speed control

VARIOFAN – the fans with IC technology and temperature-dependent speed control. VARIOFANS always cool at the speed required by the appliance resulting in speeds as much as 50% lower than those of standard fans and a drastic reduction of the noise level in almost all operating conditions. VARIOFANS are controlled without dissipation losses: At lower speeds their power consumption is reduced proportionally.

S-Force

The new S-Force fans with their extremely high blower capacity of up to 950 m³/h and pressure build-up of up to 1200 Pascal are capable of dealing with the extreme heat load. If needed, these fans can produce up to 100% more output under full load and they work with a much broader delivery bandwidth than current models. This makes them ideal for equipment and systems with a high density of components. Thanks to intelligent motor features, they can be individually adapted for any application. S-Force fans are available in 5 standard dimensions.

Optional special versions

Information Pictograms

On the pages of the catalogue and on the following overview pages, the pictograms illustrated below provide information about technically possible special versions in the fan line presented.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations.

The special versions are designed for specific customers and projects and are not usually available off the shelf.

Speed Signal

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 90.

Go / No Go Alarm

The fan uses a separate wire to output a static signal when it is stationary, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 97.

Alarm with limit speed

If the speed drops below a certain level defined in the fan's electronics, the fan will emit a static signal, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 94.

External temperature sensor

An NTC is connected to the fan via a separate wire and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 100.

Internal temperature sensor

In this case, the NTC is integrated into the fan and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 100.

PWM control input

The speed of the fan can be changed via a pulse-width-modulated signal. This signal is applied to a specially provided wire. For details, please refer to page 101.

Analogue control input

The speed of the fan can be changed via a control voltage. This control voltage is applied to a specially provided wire. For details, please refer to page 101.

Protection against moisture

Protection for the fan's electronics against moisture and condensation. For details, please refer to page 102.

IP 54

Protection of motor and PCB board against splashed water and humidity. For details, please refer to page 102.

Protection against salt spray fog

Protection of fan against the damaging effects of salt spray fog. For details, please refer to page 102.

DC Axial Fans

Series 250 25 x 25 x 8 mm

Highlights:

- Compact fan with low power consumption.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Connection via single wire AWG 28, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 5 g.

DC Axial Fans

Series 400 F 40 x 40 x 10 mm

New Models

Highlights:

- Compact fan with low power consumption.
- Some models suitable for use at high ambient temperatures.

General characteristics:

- Material: fiberglass-reinforced plastic. impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 28, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 17 g.

DC Axial Fans

Series 400 J 40 x 40 x 25 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Low operating noise at high back pressure.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 26, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 50 g.

DC Axial Fans

Series 620 60 x 60 x 25 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Motor with very low structure-borne noise.
- Innovative impeller with winglets for low noise.
- Control inputs, alarm and speed signals available on request.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 85 g.

DC Axial Fans

Series 600 N VARIOFAN 60 x 60 x 25 mm

Highlights:

- Open loop speed control by means of external or internal temperature sensor.
- Automatic speed adjustment according to cooling requirements.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 66 g.

V-Types

The temperature sensor for controlling the motor speed is not included in delivery.

Temperature sensor LZ 370 see accessories.

I-Types

Temperature sensor (NTC-resistor) for controlling the motor speed is positioned directly in the air flow.

max. 70 m³/h

DC Axial Fans

Series 600 J 60 x 60 x 32 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Innovative impeller with winglets for low noise.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 100 g.

DC Axial Fans

Series 700 F 70 x 70 x 15 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Low operating noise at high back pressure.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 28, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 53 g.

DC Axial Fans

Series 8450 80 x 80 x 25 mm

Highlights:

- Highly stable characteristic curve for high air flow at high back pressure.
- Motor with very low structure-borne noise properties.
- Innovative impeller with winglets for low noise.
- Extremely quiet Sintec-sleeve bearing.
- Models with 25 kHz PWM control and speed signal.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 105 g.

DC Axial Fans

Series 8400 N VARIOFAN 80 x 80 x 25 mm

Highlights:

- Open loop speed control by means of external or internal temperature sensor.
- Automatic speed adjustment according to cooling requirements.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 95 g.

V-Types

The temperature sensor for controlling the motor speed is not included in delivery.

Temperature sensor LZ 370 see accessories.

I-Types

Temperature sensor (NTC-resistor) for controlling the motor speed is positioned directly in the air flow.

max. 80 m³/h

DC Axial Fans

Series 8300 80 x 80 x 32 mm

Highlights:

- Ball bearings and sleeve bearings available.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 170 g.

Rotor protrusion max. 0.4 mm.

max. 222 m³/h

DC Axial Fans

Series 8200 J 80 x 80 x 38 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Innovative impeller with winglets for low noise.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation. Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24 (H3 and H4: AWG 22), TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 160 g (H3 and H4: 200 g).

8200 JH3 and JH4 also as standard with PWM control input and speed signal.
Speed control range from 2000 min⁻¹ up to maximum nominal speed. Stationary at 0 % PWM,
maximum speed when no sensor is connected.

max. 102 m³/h

DC Axial Fans

Series 3400 N 92 x 92 x 25 mm

Highlights:

- Ball bearings and sleeve bearings available.
- Some models suitable for use at high ambient temperatures to 85 °C.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 100 g.

Rotor protrusion max. 0.4 mm.

max. 280 m³/h

DC Axial Fans

Series 3200 J 92 x 92 x 38 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Innovative impeller with winglets for low noise.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation. Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24 (H3 and H4: AWG 22), TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 240 g (H3 and H4: 280 g).

3200 JH3 and JH4 also as standard with PWM control input and speed signal.
Speed control range from 2000 min⁻¹ up to maximum nominal speed. Stationary at 0 % PWM,
maximum speed when no sensor is connected.

max. 170 m³/h

DC Axial Fans

Series 4400 F 119 x 119 x 25 mm

Highlights:

- Ball bearings and sleeve bearings available.
- Open loop speed control available on request.
- Alarm and speed signals available on request.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 175 g.

Rotor protrusion max. 0.4 mm.

max. 170 m³/h

DC Axial Fans

Series 4300 VARIOFAN 119 x 119 x 32 mm

Highlights:

- Open loop speed control by means of external or internal temperature sensor.
- Automatic speed adjustment according to cooling requirements.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 220 g.

The temperature sensor for controlling the motor speed is not included in delivery.
Temperature sensor LZ 370 see accessories.

max. 285 m³/h

DC Axial Fans

Series 4400 119 x 119 x 38 mm

Highlights:

- Innovative impeller with winglets for low noise.
- Control inputs, alarm and speed signals available on request.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CW looking at rotor.
- Mass: 250 g.

DC Axial Fans

Series 4200 119 x 119 x 38 mm

Highlights:

- Ball bearings and sleeve bearings available.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: fiberglass-reinforced plastic. Impeller PA, housing PBT.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 290 g.

DC Axial Fans

Series 4100 N 119 x 119 x 38 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Low operating noise at high back pressure.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx).
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection with flat pin terminals, 2.8 x 0.5 mm. Optional with leads.
- Air intake over struts. Rotational direction CCW looking at rotor.
- Mass: 390 g.

DC Axial Fans

Series 4100 N High Performance 119 x 119 x 38 mm

Highlights:

- Highly stable characteristic curve for high air flow with high back pressure.
- Low operating noise at high back pressure.
- Available as standard with PWM control input and speed signal, additional inputs and outputs on request. 3-phase fan drive with high degree of running smoothness.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx).
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 20, sensor and control leads AWG 22, UL1007, TR 64. Stripped and tinned ends.
- Air intake over struts. Rotational direction CW looking at rotor.
- Mass: 425 g.

To achieve the specified life, it is advisable to wire up an external capacitor with 470 µF between the positive and negative strands.

*36...72 V DC on request.

Speed control range from 500 min⁻¹ up to maximum nominal speed. Stationary at 0 % PWM, maximum speed when no sensor is connected.

max. 275 m³/h

DC Diagonal Fans

Series DV 4100 119 x 119 x 38 mm

Highlights:

- Diagonal compact fan with low noise and high pressure saddle.
- Highly stable characteristic curve for high air flow with high back pressure.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx).
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64, bared and tin-plated
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 375 g (with aluminium housing : 455 g).

*Modelle NHH: Fan housing with moulded-in spacers.

max. 324 m³/h

DC Diagonal Fans

Series DV 5200 127 x 127 x 38 mm

Highlights:

- Diagonal compact fan with low noise and high pressure saddle.
- Highly stable characteristic curve for high air flow with high back pressure.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- DV 5214 /2HP with PWM control input and speed signal, additional inputs and outputs on request.

General characteristics:

- Material: housing of fiberglass-reinforced plastic, optional of aluminium. Metal flange. Impeller of fiberglass-reinforced plastic PA; housing with grounding lug for screw M4 x 8 (Torx).
- Fully integrated electronic commutation. Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64, bared and tin-plated.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 415 g (with metal housing: 490 g).

DC Axial Fans

Series 5100 N 135 x 135 x 38 mm

General characteristics:

- Material for aluminium housing and impeller; housing with grounding lug for screw M4 x 8 (Torx). 48 V version incl. screws.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64, bared and tin-plated.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 650 g.

DC Axial Fans

Series 5300 140 x 140 x 51 mm

Highlights:

- 3-phase fan drive high degree of running smoothness.
- Highly stable characteristic curve for high air flow with high back pressure.
- Low operating noise at high back pressure.
- Standard with PWM control input and speed signal, additional inputs and outputs on request.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx).
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 20, TR 64. Stripped and tinned ends.
- Air intake over struts. Rotational direction CCW looking at rotor.
- Mass: 900 g.

*Fan with extended voltage range available on request.

Models DV 6224 TD... and DV 6248 TD... are available in customer-specific, custom-developed variants only. The data specified here are technically feasible benchmark values. The fans can be specially adapted to your application with signal outputs and control inputs. For details of the technical possibilities, refer to the chapters on the sensor signal, alarm signal and control inputs beginning on page 88.

max. 480 m³/h

DC Axial Fans

Series 6400 172 x 150 x 51 mm

Highlights:

- VARIOFAN models available with external temperature sensor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx). 48 V version incl. screws.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection with flat pin terminals 3 x 0.5 mm.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 620 g.

* Leads 310 mm.

** 72 °C upon request.

Temperature sensor (NTC-resistor) for controlling the motor speed is positioned directly in the air flow.

max. 900 m³/h

DC Axial Fans

Series 6400 TD TURBOFAN 172 x 150 x 51 mm

Highlights:

- 3-phase fan drive with high degree of running smoothness.
- Highly stable characteristic curve for high air flow with high back pressure.
- Control inputs, alarm and speed signals available on request.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx). 48 V version incl. screws.
- Fully integrated electronic commutation.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor. Direction of rotation reversible.
- Mass: 760 g.

max. 530 m³/h

DC Diagonal Fans

Series DV 6400 172 x 160 x 51 mm

Highlights:

- Diagonal compact fan with low noise and high pressure saddle.
- Highly stable characteristic curve for high air flow with high back pressure.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

General characteristics:

- Material: aluminium housing, fiberglass-reinforced PA impeller; housing with grounding lug for screw M4 x 8 (Torx). 48 V version incl. screws.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 820 g.

DC Diagonal Fans

W1G 180 Ø 200 x 70 mm

- Material: Die-cast aluminium wall ring, 5 plastic PA blades. Rotor galvanized.
- Polarity and locked rotor protection, soft start.
- Direction of air flow: "V", exhaust over struts. Rotational direction CCW looking at rotor.
- Type of protection: IP 20. Insulation class: "B".
- Maintenance-free ball bearings.
- Control input 0-10 V DC / PWM and tach output.
- Lateral cable exit.
- Continuous operation (S1).
- Mass: 1.8 kg.

DC Radial Fans

Series RV 40 105 x 59 x 79 mm

Highlights:

- Pressure-optimized blower.
- Motor with very low structure-borne noise properties.
- Forward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 26, TR 64. Stripped and tinned ends.
- Mass: 100 g.

DC Radial Fans

Series RL 65 97 x 93,5 x 33 mm

Highlights:

- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Pressure-optimized blower. Noise-optimized air outlet in scroll housing.
- Forward curved impeller.
- Integrated retaining ribs for rational assembly.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 24, TR 64. Stripped and tinned ends.
- Mass: 170 g.

DC Radial Fans

Series RLF 100 127 x 127 x 25 mm

Highlights:

- Very flat and powerful radial compact fans. Pressure-optimized blower.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Some models available as standard with PWM control input and speed signal.
- Backward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller. Housing base of galvanised steel plate.
- Fully integrated electronic commutation. Protected against reverse polarity and blocking.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Mass: 320 g.

DC Radial Fans

Series RG 90 N 135 x 135 x 38 mm

Highlights:

- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.

- Backward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller; Housing base of steel plate.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- 48 V Model: Flat pin 6.3 x 0.8 mm for grounding wire.
- Mass: 440 g.

DC Radial Fans

Series RG 160 NTD TURBOFAN 220 x 220 x 56 mm

Highlights:

- Control inputs, alarm and speed signals available on request.
- 3-phase fan drive with high degree of running smoothness.
- High pressure build-up.
- Backward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller;
- Housing base of galvanised steel plate.
- Fully integrated electronic commutation.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- 48 V Model: Flat pin 6.3 x 0.8 mm for grounding wire.
- Mass: 1.4 kg.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:

Centrifugal fan mounted on a base plate 127 x 127 mm. Cover plate 127 x 127 mm with an air-inlet of Ø 70 mm, concentric to the blower wheel.

max. 190 m³/h

DC Radial Fans

Series RER 101 101 Ø x 52 mm

Highlights:

- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Backward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:
Centrifugal fan mounted on a base plate 260 x 260 mm.
Cover plate 260 x 260 mm with an air-inlet of Ø 100 mm, concentric to the blower wheel.

max. 354 m³/h

DC Radial Fans

Series RER 160 NTD TURBOFAN 165 Ø x 51 mm

Highlights:

- Control inputs, alarm and speed signals available on request.
- 3-phase fan drive with high degree of running smoothness.
- High pressure build-up.
- Backward curved impeller.

General characteristics:

- Fiberglass-reinforced plastic scroll housing and impeller; Housing base of steel plate.
- Fully integrated electronic commutation.
- Direction of air flow: axial suction, radial air outlet.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Mass: 590 g.

Model RER 160-28/18 NTD... is available in customer-specific, custom-developed variant only.

The data specified here are technically feasible benchmark values. The fans can be specially adapted to your application with signal outputs and control inputs.

For details of the technical possibilities, refer to the chapters on the sensor signal, alarm signal and control inputs beginning on page 88.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:

Centrifugal fan mounted on a base plate 260 x 260 mm. Cover plate 260 x 260 mm with an air-inlet of Ø 100 mm, concentric to the blower wheel.

max. 155 m³/h

DC-Cross-flow Blowers

Series QG 030 201...413 x 50 x 48 mm

Highlights:

- Tangential fans with high air flow.
- Large outlet area.

General characteristics:

- Motor with ball bearing system. Blower wheel mounting plate with sleeve bearings.
- Fan blower and air duct housing of aluminium. Plastic flanges.
- Fully integrated electronic commutation.
- Protected against reverse polarity and blocking.
- Air exhaust through housing port.
- Electrical connection via single leads. Stripped and tinned ends.
- Mass: 235 / 290 / 380 / 415 g.

Technical Information

Cooling capacity and efficiency

Greater power density, increasing miniaturization and extreme electronic component density are posing increased demands on the cooling capacity and efficiency of fans. The intelligent and space-saving integration of the fan in the appliance configuration is therefore of major importance:

- Tailor-made cooling adapted to the situation as and when required.
- Programmable cooling by defining speed profiles.
- Transparency of function thanks to complete, interactive monitoring in all operating conditions.

ebm-papst provides intelligent cooling concepts which are optimally adapted to requirements. For example:

1. Speed adaptation via NTC sensor

Standard fans in electronic cooling—millionfold tried and tested and nevertheless a temporary solution because standard fans have a distinct disadvantage: With constant speed and a corresponding high noise factor they continuously provide the airflow required in extreme cases. This extreme case only occurs, if it occurs at all, for a fraction of the service life. What is needed is the intelligent fan that automatically adapts to the current cooling requirements.

The ebm-papst answer: A complete range of DC fans with temperature-controlled speed adaptation - in all standard dimensions.

Installation is simple. The control electronics receive their thermal information for speed adaptation steplessly and loss-free via a temperature sensor either externally via a single lead, positioned as required, or internally directly in the fan hub in the airflow.

2. DC fans with separate control input

Speed control is also possible with DC fans that have a separate control input. A variation in speed can thus be realized via a control voltage or a pulse-width modulated signal. These possibilities are used above all in devices that have appropriate standard interfaces and thus require a load-dependent variation of the fans.

Fans with TD motor
Programmable fans
Vario-Pro®
Fans with sensor signal
Fans with alarm signal

Technical Information

3. Sensor signal

DC fans with sensor signal.

The integrated „electronic tacho“ continuously provides an actual speed signal for external evaluation. The user is informed at all times of the current fan speed via an extremely simple signal evaluation by the customer. The sensor signal is via a separate lead.

4. Alarm signal

For applications which require monitored fan operation with alarm signal, ebm-papst has numerous alarm signal versions, either a static, pre-processed or interface-compatible long-or short-term signal depending on the type of fan.

5. Turbo drives

Fans with three-phase EC drives and fully integrated operating electronics. These three-phase motors whose torque is virtually non-reliant on the rotor position are used for extremely high power. These motors can also be operated in both directions of rotation so that in special cases reverse operation of the fans can be realized.

6. Vario-Pro fans

This High-End fan concept by ebm-papst with programmed intelligence and customer-specific integrated functions makes your electronic cooling even more variable and competitive. Vario-Pro ensures fresh impetus as far as economy is concerned for all demanding cooling tasks – e.g. where reliability, more flexibility and intelligent function features such as alarm function, speed control etc. are required.

The successful concept of Vario-Pro is: Tailor-made software instead of a fixed hardware because programmed software modules for motor control and application intelligence are responsible for the work that analogue components were responsible for in the past. This central control unit of the Vario-Pro comprises of a microcontroller and an EEPROM, on which all characteristics are stored.

7. Protection against environmental influences

Some applications are demanding on the fans' resistance to ambient influences, such as dust, humidity, water and salt. ebm-papst offer solutions for adapting fans to various ambient conditions.

Sensor signal /2 "tacho"

Electrical connection

Signal output voltage

Standard signal for all models (exemptions see below)

- Speed-proportional rectangular pulse for external speed monitoring of fan motor.
- 2 pulses per revolution / 6 pulses per revolution with TURBOFANS.
- Open-Collector signal output.
- Extremely wide operating voltage range (5 ... 60 V).
- Easy adaptation to user interface.
- Connection via separate lead.
- The sensor signal also serves as a major comparison variable for setting and maintaining the desired speed for interactive or controlled cooling with one or several interconnected fans.

Alarm signal /17

- Alarm signal for speed monitoring.
- Signal output via open collector.
- The fan emits a high continuous signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached.
- After elimination of fault, the fan returns to its desired speed; the alarm signal reverts to high.

Attention:

With these fan specials, deviations as regards temperature range, voltage range and power consumption are possible compared with standard fans.

Available on request:

- With integrated signal latching for subsequent recognition of short-term faults.
- Alarm circuit open collector or TTL.
- Galvanically separated for max. device safety; defects in power circuit have no effect on the alarm circuit.

Electrical connection

All voltages measured to ground.
External load resistance R_a from U_A to U_{BA} required.

t_2 = Alarm signal suppression during start-up.
* $n < n_G$ by braking or blocking.

Alarm signal /37

- Alarm signal for speed monitoring.
- Signal output for open collector.
- The fan emits a high continuous signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached.
- After elimination of fault, the fan returns to its desired speed; the alarm signal reverts to high.

Available on request:

- Alarm circuit TTL compatible.

Vario-Pro®

- "Software instead of hardware" – aptly describes the unique fan concept, equipped at the plant with tailor-made intelligence for cooling electronics.
- Flexible configuration using software, allows quicker availability, sampling from the factory and the ability to supply customer-specific solutions in any quantity.

Vario-Pro-Features

Externally Speed setting

- Speed Setting via temperature, PWM or analog control voltage.
On Page 100 (Speed setting).
- Description of speed curve with up to 14 selectable interpolation points.
Linear interpolation between the points.
- 0 rpm. possible.
- Recognition of sensor failure: In case of loss of sensor, the fan operates at programmable (fail-safe) speed.

Alarm- and tacho functions

- Optional alarm/or tacho function
- Selectable alarm speed limit (with hysteresis) and alarm delay time
- Latching of alarm signal
- Delay only when starting or permanently active
- Output signal "High" or "Low" in case of alarm
- Optional alarm when temperature sensor fails.
- Optional alarm in case of excess temperature.

Motor management

- High control accuracy due to digital motor management
- Higher operating efficiency due to optimum adaption of motor hardware and software.

Speed setting with temperature

- ebm-papst fans can come equipped with optional fan speed control.
- Temperature, analog voltage or a PWM can serve as control variables.

External Temperature sensor Type T

- Ext. NTC type LZ370 is required (not included in the standard scope of delivery).

Internal Temperature sensor Type I

- NTC integrated in fan hub.

Standard speed-temperature curve for type T and type I

$$n_{\min} \approx \frac{1}{2} n_{\max}$$

$$T_{\min} \approx 30 \text{ }^{\circ}\text{C}; T_{\max} = 50 \text{ }^{\circ}\text{C}$$

Optionally available with user-selectable temperature-speed curve control

$$n_{\min} \approx 800 \text{ } 1/\text{min}$$

$$T_{\min} \approx 5 \text{ }^{\circ}\text{C}$$

$$n_{\max} \text{ model-dependent}$$

$$T_{\max} \leq 85 \text{ }^{\circ}\text{C}, \text{model-dependent}$$

Speed Setting with control voltage or PWM

Speed setting via control voltage Type A

- Standard control range 0 ... 5 V.

- Optional control range 0 ... 10 V.

Speed setting via PWM Type P

- Speed setting via PWM signal that is user generated as a controlled variable.
PWM signal: 2 KHz (0–100 %)
Open collector input

Standard curve P / A

Optional – selectable curve P / A

Protected Fans

against environmental influences

- Meeting special requirements for a broad range of applications.
- Resistant to environmental influences, such as dust, splash water, humidity, spray water and salt fog.
- Highly competent solutions for adapting fans to environmental conditions.

Humidity protection

A coating on the motor and printed circuit board protects against humidity and condensation.

IP 54 protection

The motor and circuit board are coated to protect them against splash water and humidity. High protection classes up to IP 67 are available on request.

Salt fog protection

Salt fog is extremely demanding on the resistance of the product. ebm-papst make use of technologies that protect fans and blowers from salt fog reliably and durably.

Stainless steel bearings

Special bearings made of stainless steel provide additional protection.

The solutions that are available and in use can differ depending on size. We would be glad to develop solutions tailored for the demands of your application.

Technical Information

Progress made by ebm-papst

The best example: The ACmaxx fans from ebm-papst, which, thanks to an ingenious yet simple improvement over conventional AC fans, provide substantial benefits.

The aim in developing the new ACmaxx series was to raise the technology standard of the conventional AC fan and, in the process, facilitate the transition to the new technology by retaining the overall mounting dimensions. In short, to ensure the fans can be replaced 1:1 without any peripheral changes or changes to the voltage situation.

The outstanding features of ACmaxx fans:

1. Designed for all AC voltages

The ACmaxx generation of fans is designed for direct connection to all AC voltages and frequencies with no switching required, handling from 85 to 265 V AC and frequencies of 50 to 60 Hertz.

Voltage fluctuations in the power system are automatically compensated for. Its universal power supply allows for great potential savings in reduced stockholding and logistics.

2. More power, more flexibility

In contrast to conventional AC technology, the modern drive concept of this fan series is not linked to a fixed power frequency. Hence the motor speed can be increased over a wide range. As such, ACmaxx provides significantly higher air flow and increased pressure.

3. Highest energy efficiency

The ACmaxx drive concept is based on state-of-the-art EC technology with outstanding motor efficiency. Compared to AC fans of the same size, ACmaxx energy consumption is up to 75% lower – for higher cooling capacity! The energy difference alone means that the ACmaxx pays for itself after a few months. The savings over the entire service life, especially in systems with multiple fans, is considerable.

Energy cost comparison: Standard AC fan versus ACmaxx, at the higher air performance.

4. Long service life

The ACmaxx motor efficiency is up to 75% greater than that of conventional AC fan variants. This not only saves energy, it also means less intrinsic heating in the motor. The reduced heating has a direct, positive affect on the bearing system, which is why ACmaxx fans have a service life that is up to 85% longer than conventional AC fans!

This also lengthens the service and maintenance intervals significantly. The expense of replacement fans, and even more expensive downtimes, are kept to a minimum.

5. Flexible and failsafe

The flexibility of ACmaxx is one-of-a-kind. With its intelligent features, ACmaxx can be individually adapted to the specific application: standby mode, overload mode at peak times or night reduction all the way to temperature-controlled quiet operation are all possible. From speed setting to alarm or speed signal outputs, ACmaxx offers optional interfaces with which you can quickly and easily implement operation monitoring.

You can find further information about these fan options in the "Specialized fans" chapter, starting on page 87. Or you can simply contact our application engineers to discuss your ideal ACmaxx fan.

6. Security

- Safety UL and CSA.
VDE 0805 / EN60950 approvals applied for.
VDE 0700 / EN60335 on request.
- Our fans have the CE mark of conformity.
- EMV protection
 - > EN61000-4-4 Level 1 (1 kV)B
 - > EN61000-4-2 Level 8 KV/15 KV
 - > EN61000-4-3
 - > EN61000-4-6
 - > EN61000-4-8
 - > EN55022 Class B

7. Environment

- Optional: improved humidity protection or Protection Class IP 54.

* Partially granted, partially in registration stage.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations. The special versions are designed for specific customers and projects. As a rule they are not available off the shelf and are tied to minimum volumes.

Please consult your customer support representative about the feasibility of your special variant.

Optional special versions

Information Pictograms

On the pages of the catalogue and on the following overview pages, the pictograms illustrated below provide information about technically possible special versions in the fan line presented.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations.

The special versions are designed for specific customers and projects and are not usually available off the shelf.

Speed Signal

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 90.

Go / No Go Alarm

The fan uses a separate wire to output a static signal when it is stationary, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 97.

Alarm with limit speed

If the speed drops below a certain level defined in the fan's electronics, the fan will emit a static signal, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 94.

External temperature sensor

An NTC is connected to the fan via a separate wire and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 100.

Internal temperature sensor

In this case, the NTC is integrated into the fan and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 100.

PWM control input

The speed of the fan can be changed via a pulse-width-modulated signal. This signal is applied to a specially provided wire. For details, please refer to page 101.

Analogue control input

The speed of the fan can be changed via a control voltage. This control voltage is applied to a specially provided wire. For details, please refer to page 101.

Protection against moisture

Protection for the fan's electronics against moisture and condensation. For details, please refer to page 102.

IP 54

Protection of motor and PCB board against splashed water and humidity. For details, please refer to page 102.

Protection against salt spray fog

Protection of fan against the damaging effects of salt spray fog. For details, please refer to page 102.

max. 80 m³/h

ACmaxx Axial Fans

Series AC 8300 80 x 80 x 32 mm

Highlights:

- Universally suitable for all AC voltages between 85 and 265 V.
- Fan speed not dependent on line frequency.
- Significantly reduced power consumption compared to conventional AC fans.
- Open loop speed control, sensor and alarm signal possible on request.

General attributes:

- Material: fibreglass reinforced plastic. PA impeller, PBTP housing.
- Fully integrated electronic commutation.
- Protected against blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 325 g.

Nominal Date		Air Flow m ³ /h	Air Flow CFM	Nominal Voltage V	Frequency Hz	V AC	Voltage Range dB(A)	Noise Bel	Sinter-Sleeve Bearings Ball Bearings	Power Input □ / ■	Nominal Speed min ⁻¹	Temperature Range °C	Service Life L ₁₀ at 40 °C Hours	at T _{max} Hours	Curve

ACmaxx Axial Fans

Series AC 3200 J 92 x 92 x 38 mm

Highlights

- Universally suitable for all AC voltages between 85 and 265 V.
- Fan speed not dependent on line frequency.
- Significantly reduced power consumption compared to conventional AC fans.
- Open loop speed control, sensor and alarm signal possible on request.
- Highly compression-insensitive characteristic curve for high air flow with high back pressure.
- Innovative impeller with winglets for low noise levels.

General attributes:

- Material: fibreglass reinforced plastic. PA impeller, PBTP housing.
- Fully integrated electronic commutation. Protected against blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.

ACmaxx Axial Fans

Series AC 6200 N 172 ø x 51 mm

Highlights:

- Universally suitable for all AC voltages between 85 and 265 V.
- Fan speed not dependent on line frequency.
- Significantly reduced power consumption compared to conventional AC fans.
- Open loop speed control, sensor and alarm signal possible on request.

General attributes:

- Material: aluminium housing, fiberglass-reinforced PA impeller. Housing with grounding lug for screw M4 x 8 (Torx).
- Fully integrated electronic commutation.
- Protected against blocking.
- Electrical connection via single leads AWG 22, TR 64. Stripped and tinned ends.
- Blowing over struts. Rotational direction CCW looking at rotor.
- Mass: 900 g.

Technical Informations

Program

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development activity, millions of units in series production and competence in innovation of a world-wide technological leader.

A wide range of fans for AC operation are presented in this catalogue. In addition to complete equipment fans, you will also find fans without external housing, providing a particularly economical advantage when the air duct can be integrated in the respective appliance.

Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings or for extreme ambient conditions; Fans with ball bearings are available pin connection or free-hanging leads.

Shaded-pole or capacitor motors

Fan drive by shaded-pole or capacitor motors most of which incorporate the world-famous ebm-papst external rotor principle: The fan blades are directly attached to the external rotor of the external rotor motor thus combining both high performance and profitability.

Flat built AC fans

ebm-papst also has particularly flat built AC fans with internal rotor motor. Their advantage being, quick start to full speed. A plastic impeller and the both smaller and lighter internal rotor motor lead to a lower moment of inertia.

Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E or F insulated motors.

Protection class

All ebm-papst fans conform to the requirements of IP 20. Fans conforming to IP 54 and special types of protection class are also available.

AC voltage

The line of AC fans for Euro voltage according to IEC 38 (230 V + 6 %, -10 %) is basically also available for 115 V.

Frequencies

AC fans can be operated at frequencies of 50 Hz or 60 Hz. However, their technical data then changes accordingly.

Capacitor

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required phase-shift capacitor is already integrated in the fan housing.

Overloading

Almost all AC fans are protected against overloading (e.g. due to blocked rotor) the drive motors are either impedance protected (marked "Impedance protected", and/or "Z.P.") or are equipped with a thermal switch (marked "Thermally protected" or "Th.P."). The model designation of these fans ends with "S".

Information Pictograms

On the pages of the catalogue and on the following overview pages, the pictograms illustrated below provide information about technically possible special versions in the fan line presented.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations.

The special versions are designed for specific customers and projects and are not usually available off the shelf.

Speed Signal

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 90.

Protection against moisture

Protection for the fan's electronics against moisture and condensation. For details, please refer to page 102.

IP 54

Protection of motor and PCB board against splashed water and humidity. For details, please refer to page 102.

Protection against salt spray fog

Protection of fan against the damaging effects of salt spray fog. For details, please refer to page 102.

AC Axial Fans

Series 8000 A 80 x 80 x 38 mm

- AC fans with external rotor shaded-pole motor. Impedance protected against overloading.
- Metal fan housing and impeller.
- Air intake over struts. Rotational direction CW looking at rotor.
- Electrical connection via 2 flat pins 2.8 x 0.5 mm.
- Fan housing with ground lug and screw M4 x 8 (TORX).
- Mass: 490 g.
- Also available with electrical connection via leads.
- Also available with air-exhaust over struts and of rotation cw.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 76.5 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 8000 A is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

AC Axial Fans

Series 4000 N 119 x 119 x 38 mm

- AC fans with external rotor shaded-pole motor. Impedance protected against overloading.
- Metal fan housing and impeller
- Air intake over struts. Rotational direction CW looking at rotor.
- Types 4890 N and 4840 N air exhaust over struts.
- Electrical connection via 2 flat pins 3.0 x 0.5 mm.
- Also available: Models with mounting bosses and single leads.
- Fan housing with ground lug for screw M 4 and UNC.
- Mass: 550 g.

* Fan with 3 blades.

AC Axial Fans

Series 4000 Z 119 x 119 x 38 mm

- AC fans with external rotor shaded-pole motor. Impedance protected against overloading.
- Metal fan housing and impeller.
- Air exhaust over struts. Rotational direction CW looking at rotor.
- Electrical connection via 2 flat pins 2.8 x 0.5 mm.
- Also available: Models with mounting bosses and single leads.
- Fan housing with ground lug and screw M4 x 8 (TORX).
- Mass: 540 g.

AC Axial Fans

Series 4600 TA 113 Ø x 37 mm

- AC fans with external rotor shaded-pole motor. Impedance protected against overloading.
- Impeller and mounting bracket of metal.
- Air intake over mounting bracket. Rotational direction CW looking at rotor.
- Electrical connection via 2 leads. Stripped and tinned ends.
- Mass: 430 g.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 109 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 4600 N is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

AC Axial Fans

W2E 250 280 x 280 x 80 mm

- External single-phase motor.
- Motor protection: TOP wired internally.
- Material: Wall ring die-cast aluminium, seven blades sheet steel. Blades and rotor coated in black.
- Direction of air flow "V", exhaust over struts. Direction of rotation: counter-clockwise, seen on rotor.
- Electrical connection: Terminal strips (operating capacitor connected).
- Continuous operation (S1).
- Insulation class: "F"
- Mass: 2000 g.

AC Radial Fans

Series RL 90 121 x 121 x 37 mm

- AC radial blower with external rotor shaded-pole motor. Impedance protected against overloading.
- Spiral housing and blower wheel of fibreglass-reinforced plastic. Housing base of galvanised steel plate.
- Air exhaust radial, through housing port. Rotational direction CW looking at rotor.
- Electrical connection via 2 leads. Stripped and tinned ends.
- Mass: 680 g.

AC Radial Fans

Series RG 160 220 x 220 x 56 mm

- AC radial blower with external rotor shaded-pole motor. Thermal contactor as protection against thermal overloading.
- Spiral housing and blower wheel of fibreglass-reinforced plastic. Housing base of galvanised steel plate.
- Air exhaust radial, through housing port. Rotational direction CCW looking at rotor.
- Electrical connection via leads AWG 18. Stripped and tinned ends.
- Mass: 1.7 kg.

The air flow and noise level of fans without external housing depend on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:
Centrifugal fan mounted on a base plate 220 x 220 mm. Cover plate 220 x 220 mm with an air-inlet of Ø 86 mm, concentric to the blower wheel.

AC Radial Fans

Series RER 160 176 Ø x 54 mm

- AC radial blower with external rotor shaded-pole motor. Impedance protected against overloading.
- Blower wheel of fibreglass-reinforced plastic, with steel plate reinforced.
- Air exhaust radial. Rotational direction CCW looking at rotor.
- Electrical connection via leads AWG 18. Stripped and tinned ends.
- Mass: 1000 g.

Everything that you need for your fan. ebm-papst provides an extensive range of accessories for optimum fan operation: From temperature sensing for speed-controlled fans to finger guards of all types, switched-mode power supply, connecting cable, filter, screens, spacers and assembly parts. In addition to the accessories and assembly parts listed in this catalogue, ebm-papst also supplies numerous special parts for fan operation. The sales experts at ebm-papst will be happy to assist you in your enquiries concerning fan assembly and application.

From selection to accessories:
Insist on the efficient and reliable service provided by
ebm-papst.

Finger Guards

- Finger guards as per EN 294, of rust-proof steel wire for equipment fans.
- Further finger guards that do not conform to EN 294 can be supplied on request.

Fan Filter Guards

- Fan filter guards for installation on axial fan series for sizes 60 mm, 80 mm, 92 mm, 119 mm, 172 mm. All filter units fit directly onto the existing installation holes on the fans.
- Fan filter guards consist of 3 parts: the outer grille, the inner fastening plate and the replaceable filter mat.
- Grille is molded of polycarbonate (PC) with a matt surface.
- A quick-release on the grille allows for quick and easy filter mat replacement.
- Wire-mesh fastening plate, black powder coating.
- Filter mat replacement can be performed on running fans, welded wire-mesh protection.
- Filter mat made of white, synthetically bonded fibers.

Fan size: 60 x 60 mm
80 x 80 mm

FF92 / FF 119 / FF 172

Fan size: 92 x 92 mm
119 x 119 mm
Ø 172 mm

Filter capacity

A fan filter guard filters out up to 75% of dust particles up to a size of 5-10 microns and withstands temperatures of up to 100°C. Flame retardant in accordance with DIN 53438, grade F1. For installed, clean filters, an air flow reduction of 20 – 30% can be assumed.

Filter class

- Protective filter grille comprising mounting strap, filter and screen.
- Screen LZ40 N made of black, fiberglass-reinforced plastic with inserted wire netting (LZ60).
- LZ 60 filter made of Nirosta wire mesh.
- LZ40-1 mounting strap for assembly.

VARIOFAN	LZ370

LZ212

Screw clip of stainless steel.
For mounting fans with threaded pin 3.5 DIN EN ISO 1478 (7970).

LZ260/LZ261

Spacer of fibreglass reinforced plastic. For screw mounting over both fan mounting flanges.

LZ210

Screw clip of hardened steel. For mounting fans with threaded pin 6-32 UNC and/or 3.5 DIN 7970.

LZ370

Required performance data:

R ₂₅	= 100 KΩ ±5% @25°C
B-value	= 4190 ±2%
P _{max}	= 0,25 W

Temperature sensor for speed-controlled fan operation. Temperature range 30...50 °C.

LZ550

Rubber anti vibration mounts
for fans with a hole ø of 4.3 ±0.2 mm and
flange thickness of 3 - 5.5 mm.
For a carrier plate with a hole ø of 6.5 ±0.15 mm and
plate thickness of 1 - 2 mm.
