

70 GHz HIGH SPEED PHOTODETECTOR

XPDV3x20R

The XPDV3x20R photodetector consists of a well-established, waveguide-integrated single photodiode chip, designed to exhibit an optimized frequency response in both power and phase. Due to experienced RF packaging, the pulse response shows almost no ringing. The integrated on-chip spot size converter leads to a high responsivity and ensures reliability and robustness of the detector. An advantage of the waveguide structure is the unsurpassed high-power behavior with linear response up to an optical input power of 10 dBm. XPDVs contain a unique on-chip integrated bias network and ensure undisturbed frequency response from DC to the 3 dB cut-off frequency. Besides the standard version optimized for C-band a dual window version supporting O- and C- band is offered.

FEATURES

- 70 GHz typical bandwidth with flat response
- High linearity
- C- band and dual window version
- Unique on-chip integrated bias network
- High Linearity (OIP3 > 30 dBm at 10 GHz)

APPLICATIONS

- Microwave Photonics
- Analog Photonic links
- Radio-over-Fiber
