EZ-PD™ PAG2-PD highly-integrated Power Delivery controller for power adapter

General description

EZ-PD™ PAG2-PD CYPAS2174 is an integrated secondary-side controller which supports USB Power Delivery extended power range (EPR) mode. EZ-PD™ PAG2-PD is targeted towards USB-C power adapters, it fits well into high-efficiency AC-DC flyback designs with USB Power Delivery, Qualcomm Quick Charge, and other standard charging protocols. EZ-PD™ PAG2-PD also supports USB PD extended power range (EPR) mode.

Applications

- USB-C chargers and adapters
- USB-C chargers and adapters with EPR
- Power adapters supporting both USB PD and legacy charging
- 28 V EPR chargers and adapters, wall sockets

Features

- USB PD 3.1-compliant with extended power range (EPR) support of up to 28 V VBUS
- Supports USB PD 2.0, PD 3.0 with programmable power supply (PPS), QC5.0, QC4+, QC 4.0, QC 3.0, QC 2.0, Samsung AFC, Apple Charging, and Battery Charging (BC) V1.2 charging protocols
- Integrates low-side current sense amplifier (LSCSA), 2x VBUS discharge FETs, and an NFET gate driver to drive the load switch and VCONN FETs to support EMCA cables
- Configurable VBUS overvoltage protection (OVP), undervoltage protection (UVP), overcurrent protection (OCP), short-circuit protection (SCP), and system overtemperature protection (OTP)
- Protects against accidental VBUS to CC short; electrostatic discharge (ESD) protection on CC, VBUS, DP/DM lines, and overvoltage on DP/DM lines
- Integrates a 32-bit Cortex® M0+ with 64 KB flash, 8 KB SRAM, and 64 KB ROM
- 32-lead QFN packages with –40°C to +150°C junction temperature range

Functional block diagram

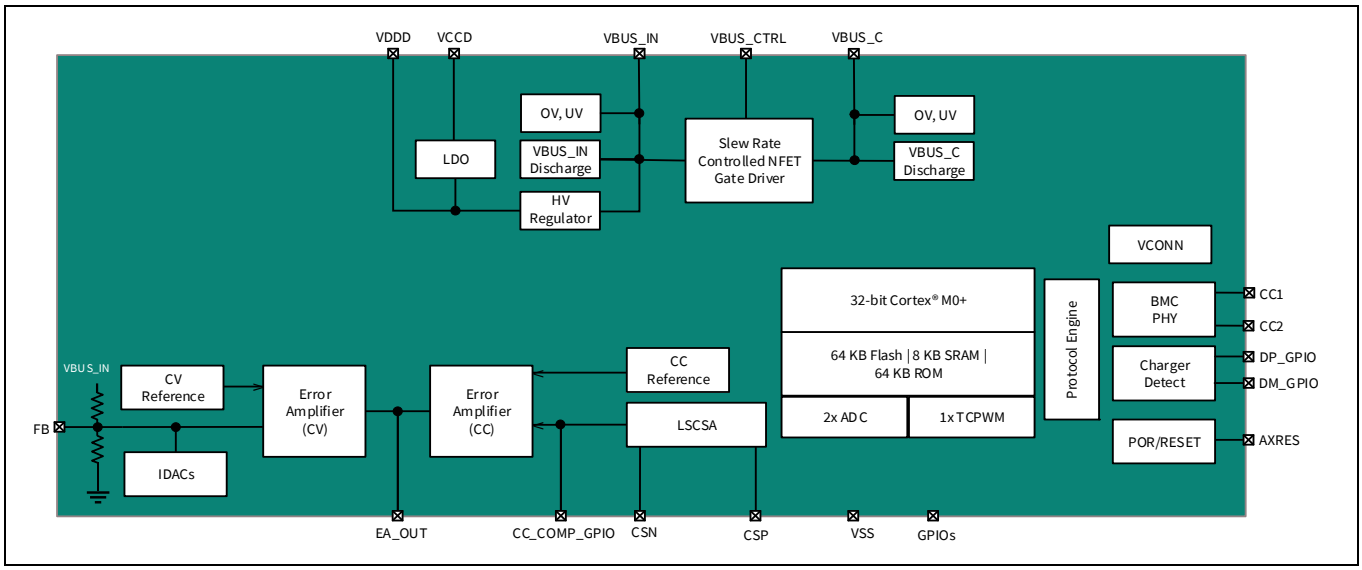

Table of contents

1 Application overview

Figure 1 shows a power adapter application diagram implementing a primary side-controlled synchronous flyback system. In this system, EZ-PD™ PAG2-PD engages the internal error amplifier (EA) to take the feedback from the secondary side and pass it on to the primary controller over an isolation barrier like an optocoupler. The primary side controller can be any standard flyback controller. In this topology, EZ-PD™ PAG2-PD integrates two key features: charging protocol control, and fault protection.

2 Pinouts

2.1 Pin definitions

Table 1 32-lead QFN pin description

Pin number	Pin name	Pin description
1	VCCD	1.8 V core voltage LDO output
2	VDDD	3.0 V to 5.5 V internal LDO output
3	VSS	Ground
4	VDDD_2	Short to pin#2
5	DNU	Do Not Use, keep floating
6	DNU	Do Not Use, keep floating
7	VDDD_VSS	Ground
8	DNU	Do Not Use, keep floating
9	DNU	Do Not Use, keep floating
10	DNU	Do Not Use, keep floating
11	DNU	Do Not Use, keep floating
12	GPIO0	GPIO
13	GPIO1	
14	DM_GPIO2	USB D–/GPIO/SWD_DAT
15	DP_GPIO3	USB D+/GPIO/SWD_CLK
16	GPIO4	Not connected
17	XRES	External reset input
18	GPIO5	GPIO
19	GPIO6	GPIO/TCPWM
20	GPIO7	GPIO
21	CC2	Power Delivery communication channel 2
22	CC1	Power Delivery communication channel 1
23	CSN	Low-side current sense amplifier negative input
24	CSP	Low-side current sense amplifier positive input
25	VBUS_C	USB Type-C VBUS monitor input
26	VBUS_CTRL	Load switch NFET gate control
27	EA_OUT	Error amplifier output
28	FB	Error amplifier feedback
29	CC_COMP_GPIO8	Pin for constant current mode compensation capacitor/GPIO/TCPWM
30	CC_COMP_GPIO9	
31	VSS	Ground
32	VBUS_IN	3.3 V to 30 V power source input for regulator

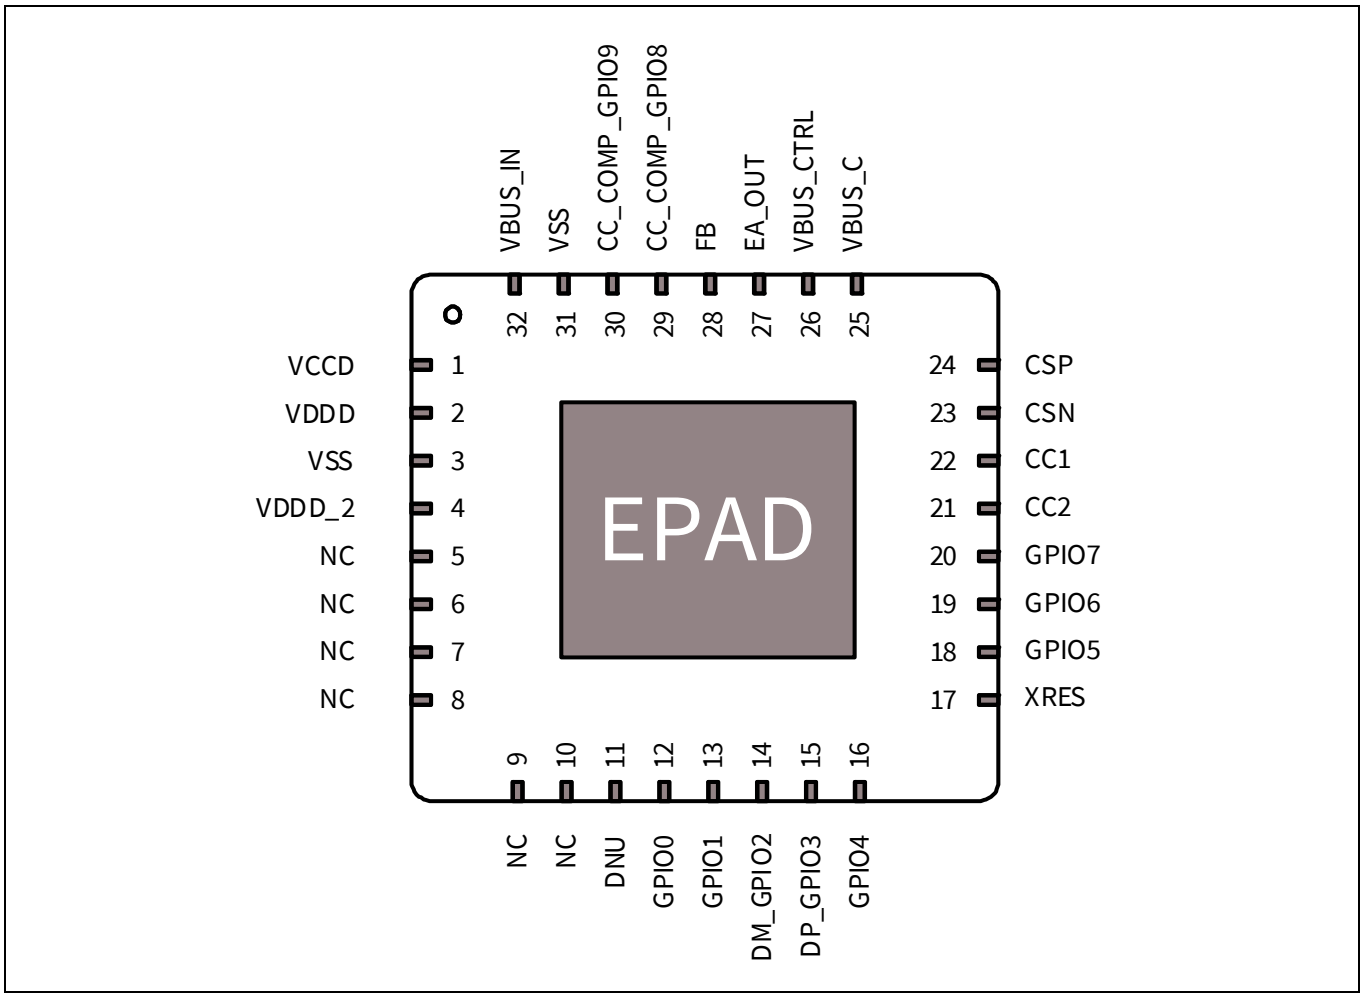

Figure 2 32-lead QFN pin map

2.2 Pin description

2.2.1 FB, EA_OUT, CC_COMP_GPIOx

EZ-PD™ PAG2-PD integrates two error amplifier blocks that handle secondary output sensing and feedback for both constant voltage and constant current modes of operation. The error amplifier output can be used to regulate the current drawn through the external optocoupler. The negative input of the error amplifier is the feedback (FB) pin and the positive input is an internal voltage reference. Based on the desired VBUS output, the voltage at the FB pin will be varied using internal current source/sink IDACs. An external compensation network is required between the FB pin and EA_OUT pin, as shown in the application diagram (see **Figure 1**). The constant current operation makes use of an internal low-side current sense amplifier (LSCSA), the output of which feeds into an independent error amplifier as shown in the functional block diagram. Constant current mode regulation requires an external compensation network between CC_COMP_GPIOx and EA_OUT as shown in **Figure 1**.

PAG2-PD error amplifier can ensure constant voltage regulation from 3.3 V to 28 V range and constant current regulation from 1 A to 5 A as required by the USB PD PPS EPR specification.

2.2.2 FB, EA_OUT, CC_COMP_GPIOx

PAG2-PD integrates two error amplifier blocks that handle secondary output sensing and feedback for both constant voltage and constant current modes of operation. The error amplifier output can be used to regulate the current drawn through the external optocoupler. The negative input of the error amplifier is the feedback (FB) pin and the positive input is an internal voltage reference. Based on the desired VBUS output, the voltage at the FB pin will be varied using internal current source/sink IDACs. An external compensation network is required between the FB pin and EA_OUT pin, as shown in the application diagram (see **Figure 1**). The constant current operation makes use of an internal low-side current sense amplifier (LSCSA), the output of which feeds into an independent error amplifier as shown in the functional block diagram. Constant current mode regulation requires an external compensation network between CC_COMP_GPIOx and EA_OUT as shown in **Figure 1**.
EZ-PD™ PAG2-PD error amplifier can ensure constant voltage regulation from 3.3 V to 28 V range and constant current regulation from 1 A to 5 A as required by the USB PD PPS EPR specification.

2.2.3 VBUS_IN, VDDD, VCCD

PAG2-PD integrates a high-voltage regulator, which is powered from the VBUS_IN rail, the output of the regulator powers the VDDD rail. The input to the regulator can range from 3.3 V minimum to 30 V maximum. This regulator is intended to deliver PAG2-PD current consumption and is not expected to drive any external loads or ICs. PAG2-PD also has an internal configurable discharge path for the VBUS_IN rail, which is used to discharge the VBUS rail during negative voltage transitions. The discharge resistor strength is configurable through firmware settings.

The regulated supply VDDD is either used to directly power some internal analog blocks or further regulated down to 1.8 V VCCD, which powers the majority of the core. VDDD and VCCD are brought out onto pins to connect external capacitors for regulator stability and these are not meant to be used as power supplies.

2.2.4 VBUS_C, VBUS_CTRL

VBUS_C is used to monitor the voltage at the Type-C connector. VBUS_C has an internal configurable discharge path, which is used to discharge the VBUS_C rail during negative voltage transitions. The discharge resistor strength is configurable through firmware settings. The load switch is between VBUS_IN and VBUS_C. PAG2-PD integrates an NFET gate driver to control this load switch. VBUS_CTRL is the output of this gate driver. There is an optional slow turn-on feature which is meant to avoid the sudden in-rush current.

2.2.5 CSP, CSN

PAG2-PD integrates a low-side current sense amplifier (LSCSA) to monitor the load current. CSP is the positive input pin for the LSCSA and CSN is the negative input. Suggested Rsense for LSCSA is 5 mΩ.

2.2.6 CC1, CC2

CC1 and CC2 are the communication channels for the USB PD protocol. EZ-PD™ PAG2-PD integrates a USB PD transceiver consisting of a transmitter (TX) and receiver (RX) that communicate Biphase Mark Code (BMC) encoded data over the Configuration Channel (CC) channels as per the USB PD standard. All communication is half-duplex. The physical layer implements collision avoidance to minimize communication errors on the channel. This block includes all termination resistors (Rp) and their switches as required by the USB PD specification.

To support active cable applications, PAG2-PD also integrates VCONN FETs to power CC lines. An external 390-pF capacitor is required on both the CC1 and CC2 pins.

2.2.7 DP_GPIOx, DM_GPIOx

The DP and DM lines are the standard USB D+ and D– lines. PAG2-PD integrates a charge detect block, which handles legacy charging protocols such as BC 1.2, Quick Charge, Apple Charging, and Samsung AFC. This block integrates all the terminations required for these charging protocols and no external components are required. When legacy charging is not required in the system, the same DP and DM lines can be re-used as standard GPIOs. Charger detect block also supports impedance detection on DP/DM lines.

2.2.8 GPIOx, XRES

PAG2-PD has multiple GPIOs, out of which some are dedicated GPIOs and the rest are multiplexed with other functionalities. These GPIOs support multiple drive modes and configurable threshold options. During power-on and reset, the GPIOs are forced to the tristate so as not to crowbar any inputs and/or cause excess turn on current.

The XRES pin can be used to initiate a reset, this pin is internally pulled high and needs to be pulled low externally to trigger a reset.

3 Functional description

3.1 Fault protection

3.1.1 VBUS OVP, UVP, OCP, and SCP

VBUS undervoltage and overvoltage faults are monitored using internal VBUS_IN/VBUS_C resistor dividers. VBUS overcurrent and short-circuit faults are monitored using internal current sense amplifiers. The fault thresholds and response mechanisms are firmware configurable.

3.1.2 OTP

The overtemperature monitoring is done using an external thermistor and internal ADC. The thermistor can be connected to any free GPIO. EZ-PD™ PAG2-PD highly-integrated Power Delivery controller for power adapter has integrated 8-bit SAR ADC, this is available for general purpose analog to digital conversions. The fault thresholds and response mechanisms are firmware configurable.

3.1.3 ESD, CC OVP, and DP/DM OVP

PAG2-PD offers ESD protection on all the pins. Further, the chip integrates protection against accidental short of CC pins to high voltage VBUS_C rail and also protects against over-voltage on DP/DM pins.

3.2 Power modes

PAG2-PD supports multiple power modes - Active, Sleep, and Deep Sleep. Transitions between these modes is handled by the application firmware depending on the operating conditions.

3.3 MCU subsystem

PAG2-PD integrates a 32-bit Cortex®-M0+ MCU with 64 KB flash, 8 KB SRAM, and 64 KB ROM. PAG2-PD also supports 1x TCPWM and 2x ADC.

4 Electrical specifications

4.1 Absolute maximum ratings

Table 2 Absolute maximum ratings

Parameter	Description	Min	Typ	Max	Unit
$V_{BUS\_IN\_MAX}$	Maximum input supply voltage	–0.3	–	34	V
V_{DDD_MAX}	V_{DDD} supply voltage	–		6	–
$V_{CC\_PIN\_ABS}$	Voltage on CC1, CC2 pins			34	–
V_{GPIO_ABS}	GPIO voltage	–0.5		V_{DDD} + 0.5	–
I_{GPIO_ABS}	Current per GPIO	–		25	mA
I_LU	Pin current for latch-up	–100		100	
ESD_HBM	Electrostatic discharge human body model	–		2000	V
ESD_CDM	Electrostatic discharge charged device model			500	

4.2 Device-level specifications

Table 3 Device-level specifications

Parameter	Description	Min	Typ	Max	Unit	Details/conditions
Memory size						
FLASH_SIZE	Flash memory size	–	64	–	KB	SONOS flash amount (bytes)
SRAM_SIZE	SRAM memory size		8			SRAM amount (bytes)
SROM_SIZE	SROM memory size		64			
Silicon power						
VDDD_REG	VDDD output with VBUS 5.5 V to 30 V	4.6	5	5.4	V	–
VDDD_MIN	VDDD output with VBUS 3.15 V to 5.5 V	VBUS – 0.33	–	–		
VBUS_IN	Power supply input voltage	3.15		30.0		
VCCD	Output voltage for core logic	–	1.8	–		
VDDWRITE	Supply voltage for flash write	3	–	5.5		
Cefc	External regulator voltage bypass for VCCD	80	100	120	nF	X5R ceramic or better
Cexc	Power supply capacitor for VDDD	4	4.7	–	µF	–
Cexv	Power supply decoupling capacitor for VBUS_IN	–	1			
Igpio_abs	Current per GPIO	–		25	mA	Absolute maximum
Tsleep	Wakeup from Sleep mode	–	0	–	µs	–

Table 3 Device-level specifications *(continued)*

Parameter	Description	Min	Typ	Max	Unit	Details/conditions
Tdeepsleep	Wakeup from Deep Sleep mode	–	35	–	mA	–
IDD_A	Active current from VBUS_IN (Type-C Attached)		25.0			VBUS_IN = 11 V, TA = 25°C, CC1/CC2 in TX or RX, CPU at 24 MHz, EA/ADC/CSA/UVOV blocks ON
IDD_A4	Current from VBUS_IN (Type-C attached)		3			VBUS_IN = 28 V, TA = 25°C, Deep Sleep, No toggling on CC
IDD_DS2_UA	Deep Sleep current from VBUS_IN (Type-C unattached)		400		µA	VBUS_in = 5 V, TA = 25°C, Type-C unattached, DFP mode
L_SEC	Secondary side inductor	3	–		µH	Secondary side inductor

4.3 Functional block specifications

Table 4 Functional block specifications

Parameter	Description	Min	Typ	Max	Unit	Details/conditions
GPIO						
I_LU	Latch up current limits	–100	–	100	mA	–
RPU	Pull-up resistor value	3.5	5.6	8.5	kΩ	
RPD	Pull-down resistor value					
IIL	Input leakage current (Absolute value)	–	–	2	nA	+25°C TA, 3 V VDDD
CPIN_A	Max pin capacitance			22	pF	Capacitance on DP, DM pins
CPIN	Max pin capacitance		3	7		All VDDD, all other GPIOs
Voh	Output voltage high level	VDDD – 0.6	–	–	V	Ioh = –4 mA
Vol	Output voltage low level	–		0.6		Iol = 10 mA
Vih_CMOS	Input voltage high threshold	0.7 × VDDD		–		–
Vil_CMOS	Input voltage low threshold	–		0.3 × VDDD		
Vih_TTL	LVTTL input	2		–		
Vil_TTL	LVTTL input	–		0.8		
Vhysttl	Input hysteresis LVTTL	80	–	–	mV	
Vhyscmos	Input hysteresis CMOS	0.1 × VDDD				
IDIODE	Current through protection diode to VDDD/VSS	–		100	µA	
TriseF	Rise time in Fast Strong mode	1		15	ns	Cload = 25 pF
TfallF	Fall time in Fast Strong mode			15		–
TriseS	Rise time in Slow Strong mode	10		70		
TfallS	Fall time in Slow Strong mode					
FGPIO_OUT1	GPIO Fout; 2.85 V ≤ VDDD ≤ 5.5 V. Fast Strong mode.	–	–	28	MHz	–
FGPIO_OUT2	GPIO Fout; 2.85 V ≤ VDDD ≤ 5.5 V. Slow Strong mode.			6		
FGPIO_IN	GPIO input operating frequency; 2.85 V ≤ VDDD ≤ 5.5 V			28

LSCSA	low-side current sense amplifier
LVTTL	low-voltage transistor-transistor logic
NMOS	N-type metal-oxide-semiconductor
OCP	overcurrent protection
OVP	overvoltage protection
PD	Power Delivery
PHY	physical layer
POR	power-on reset
PPS	programmable power supply
PWM	pulse-width modulator
QR	quasi-resonant

Table 9 Acronyms used in this document *(continued)*

Acronym	Description
RAM	random-access memory
RISC	reduced-instruction-set computing
RMS	root-mean-square
RX	receive
SAR	successive approximation register
SCL	I^2C serial clock
SDA	I^2C serial data
SPI	serial peripheral interface, a communications protocol
SRAM	static random access memory
SWD	serial wire debug, a test protocol
TX	transmit
Type-C	a new standard with a slimmer USB connector and a reversible cable, capable of sourcing up to 100 W of power
USB	Universal Serial Bus
WDT	watchdog timer
XRES	external reset I/O pin
ZCD	zero crossing defect
ZVS	zero voltage switching

8 Document conventions

8.1 Units of measure

Table 10 Units of measure

Symbol	Unit of measure
°C	degrees celsius
Hz	hertz
KB	1024 bytes
kHz	kilohertz
kΩ	kilo ohm
Mbps	megabits per second
MHz	megahertz
MΩ	mega-ohm
Msps	megasamples per second
µA	microampere
µF	microfarad
µs	microsecond
µV	microvolt
µW	microwatt
mA	milliampere
ms	millisecond
mV	millivolt
nA	nanoampere
ns	nanosecond
Ω	ohm
pF	picofarad
ppm	parts per million
ps	picosecond
s	second
sps	samples per second
V	volt

Revision history

Document revision	Date	Description of changes
**	2024-04-10	Initial release.
*A	2024-06-25	Updated **"General description"** on page 1. Updated **"Applications"** on page 1. Added CYPAS2174A1-32LQXQT in **"Ordering information"** on page 17. The package diagram Spec#: 002-15160 is obsolete. Replaced the Spec# with Z8B00248918 (mentioned in the **ECN # 8022625**).

IMPORTANT NOTICE

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics ("Beschaffenheitsgarantie").

With respect to any examples, hints or any typical values stated herein and/or any information regarding the application of the product, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

In addition, any information given in this document is subject to customer's compliance with its obligations stated in this document and any applicable legal requirements, norms and standards concerning customer's products and any use of the product of Infineon Technologies in customer's applications.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

WARNINGS

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.
