

MB966B0 series is based on Cypress advanced F<sup>2</sup>MC-16FX architecture (16-bit with instruction pipeline for RISC-like performance). The CPU uses the same instruction set as the established F<sup>2</sup>MC-16LX family thus allowing for easy migration of F<sup>2</sup>MC-16LX Software to the new F<sup>2</sup>MC-16FX products.

F<sup>2</sup>MC-16FX product improvements compared to the previous generation include significantly improved performance - even at the same operation frequency, reduced power consumption and faster start-up time.

For high processing speed at optimized power consumption an internal PLL can be selected to supply the CPU with up to 32MHz operation frequency from an external 4MHz to 8MHz resonator. The result is a minimum instruction cycle time of 31.2ns going together with excellent EMI behavior. The emitted power is minimized by the on-chip voltage regulator that reduces the internal CPU voltage. A flexible clock tree allows selecting suitable operation frequencies for peripheral resources independent of the CPU speed.

## Features

### ■ Technology

0.18µm CMOS

### ■ CPU

- F<sup>2</sup>MC-16FX CPU
- Optimized instruction set for controller applications (bit, byte, word and long-word data types, 23 different addressing modes, barrel shift, variety of pointers)
- 8-byte instruction queue
- Signed multiply (16-bit × 16-bit) and divide (32-bit/16-bit) instructions available

### ■ System clock

- On-chip PLL clock multiplier (×1 to ×8, ×1 when PLL stop)
- 4MHz to 8MHz crystal oscillator (maximum frequency when using ceramic resonator depends on Q-factor)
- Up to 8MHz external clock for devices with fast clock input feature
- 32.768kHz subsystem quartz clock
- 100kHz/2MHz internal RC clock for quick and safe startup, clock stop detection function, watchdog
- Clock source selectable from mainclock oscillator, subclock oscillator and on-chip RC oscillator, independently for CPU and 2 clock domains of peripherals
- The subclock oscillator is enabled by the Boot ROM program controlled by a configuration marker after a Power or External reset
- Low Power Consumption - 13 operating modes (different Run, Sleep, Timer, Stop modes)

### ■ On-chip voltage regulator

Internal voltage regulator supports a wide MCU supply voltage range (Min=2.7V), offering low power consumption

### ■ Low voltage detection function

Reset is generated when supply voltage falls below programmable reference voltage

### ■ Code Security

Protects Flash Memory content from unintended read-out

### ■ DMA

Automatic transfer function independent of CPU, can be assigned freely to resources

### ■ Interrupts

- Fast Interrupt processing
- 8 programmable priority levels
- Non-Maskable Interrupt (NMI)

### ■ CAN

- Supports CAN protocol version 2.0 part A and B
- ISO16845 certified
- Bit rates up to 1Mbps
- 32 message objects
- Each message object has its own identifier mask
- Programmable FIFO mode (concatenation of message objects)
- Maskable interrupt
- Disabled Automatic Retransmission mode for Time Triggered CAN applications
- Programmable loop-back mode for self-test operation

### ■ USART

- Full duplex USARTs (SCI/LIN)
- Wide range of baud rate settings using a dedicated reload timer
- Special synchronous options for adapting to different synchronous serial protocols
- LIN functionality working either as master or slave LIN device
- Extended support for LIN-Protocol with 16-byte FIFO for selected channels to reduce interrupt load

### ■ I<sup>2</sup>C

- Up to 400kbps
- Master and Slave functionality, 7-bit and 10-bit addressing

### ■ A/D converter

- SAR-type
- 8/10-bit resolution
- Signals interrupt on conversion end, single conversion mode, continuous conversion mode, stop conversion mode, activation by software, external trigger, reload timers and PPGs
- Range Comparator Function
- Scan Disable Function
- ADC Pulse Detection Function

### ■ Source Clock Timers

Three independent clock timers (23-bit RC clock timer, 23-bit Main clock timer, 17-bit Sub clock timer)

- **Hardware Watchdog Timer**
  - Hardware watchdog timer is active after reset
  - Window function of Watchdog Timer is used to select the lower window limit of the watchdog interval
- **Reload Timers**
  - 16-bit wide
  - Prescaler with  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$  of peripheral clock frequency
  - Event count function
- **Free-Running Timers**
  - Signals an interrupt on overflow, supports timer clear upon match with Output Compare (0)
  - Prescaler with 1,  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$ ,  $1/2^7$ ,  $1/2^8$  of peripheral clock frequency
- **Input Capture Units**
  - 16-bit wide
  - Signals an interrupt upon external event
  - Rising edge, Falling edge or Both (rising & falling) edges sensitive
- **Output Compare Units**
  - 16-bit wide
  - Signals an interrupt when a match with Free-running Timer occurs
  - A pair of compare registers can be used to generate an output signal
- **Programmable Pulse Generator**
  - 16-bit down counter, cycle and duty setting registers
  - Can be used as 2 × 8-bit PPG
  - Interrupt at trigger, counter borrow and/or duty match
  - PWM operation and one-shot operation
  - Internal prescaler allows 1, 1/4, 1/16, 1/64 of peripheral clock as counter clock or of selected Reload timer underflow as clock input
  - Can be triggered by software or reload timer
  - Can trigger ADC conversion
  - Timing point capture
  - Start delay
- **Quadrature Position/Revolution Counter (QPRC)**
  - Up/down count mode, Phase difference count mode, Count mode with direction
  - 16-bit position counter
  - 16-bit revolution counter
  - Two 16-bit compare registers with interrupt
  - Detection edge of the three external event input pins AIN, BIN and ZIN is configurable
- **LCD Controller**
  - LCD controller with up to 4COM × 36SEG
  - Internal or external voltage generation
  - Duty cycle: Selectable from options: 1/2, 1/3 and 1/4
  - Fixed 1/3 bias
  - Programmable frame period
  - Clock source selectable from four options (main clock, peripheral clock, subclock or RC oscillator clock)
  - Internal divider resistors or external divider resistors
  - On-chip data memory for display
  - LCD display can be operated in Timer Mode
  - Blank display: selectable
- All SEG, COM and V pins can be switched between general and specialized purposes
- **Sound Generator**
  - 8-bit PWM signal is mixed with tone frequency from 16-bit reload counter
  - PWM clock by internal prescaler: 1, 1/2, 1/4, 1/8 of peripheral clock
- **Real Time Clock**
  - Operational on main oscillation (4MHz), sub oscillation (32kHz) or RC oscillation (100kHz/2MHz)
  - Capable to correct oscillation deviation of Sub clock or RC oscillator clock (clock calibration)
  - Read/write accessible second/minute/hour registers
  - Can signal interrupts every half second/second/minute/hour/day
  - Internal clock divider and prescaler provide exact 1s clock
- **External Interrupts**
  - Edge or Level sensitive
  - Interrupt mask bit per channel
  - Each available CAN channel RX has an external interrupt for wake-up
  - Selected USART channels SIN have an external interrupt for wake-up
- **Non Maskable Interrupt**
  - Disabled after reset, can be enabled by Boot-ROM depending on ROM configuration block
  - Once enabled, cannot be disabled other than by reset
  - High or Low level sensitive
  - Pin shared with external interrupt 0
- **I/O Ports**
  - Most of the external pins can be used as general purpose I/O
  - All push-pull outputs (except when used as I<sup>2</sup>C SDA/SCL line)
  - Bit-wise programmable as input/output or peripheral signal
  - Bit-wise programmable input enable
  - One input level per GPIO-pin (either Automotive or CMOS hysteresis)
  - Bit-wise programmable pull-up resistor
  - Some pins offer high current output capability for LED driving.
- **Built-in On Chip Debugger (OCD)**
  - One-wire debug tool interface
  - Break function:
    - Hardware break: 6 points (shared with code event)
    - Software break: 4096 points
  - Event function
    - Code event: 6 points (shared with hardware break)
    - Data event: 6 points
    - Event sequencer: 2 levels + reset
  - Execution time measurement function
  - Trace function: 42 branches
  - Security function

### ■ Flash Memory

- Dual operation flash allowing reading of one Flash bank while programming or erasing the other bank
- Command sequencer for automatic execution of programming algorithm and for supporting DMA for programming of the Flash Memory
- Supports automatic programming, Embedded Algorithm
- Write/Erase/Erase-Suspend/Resume commands
- A flag indicating completion of the automatic algorithm
- Erase can be performed on each sector individually
- Sector protection
- Flash Security feature to protect the content of the Flash
- Low voltage detection during Flash erases or writes

## 1. Product Lineup

Features		MB966B0	Remark
Product Type		Flash Memory Product	
Subclock		Subclock can be set by software	
Dual Operation Flash Memory	RAM	-	
128.5KB + 32KB	8KB	MB96F6B5R, MB96F6B5A	Product Options R: MCU with CAN A: MCU without CAN
256.5KB + 32KB	16KB	MB96F6B6R	
Package		LQFP-100 FPT-100P-M20	
DMA		4ch	
USART		5ch	LIN-USART 0 to 2/4/5
	with automatic LIN-Header transmission/reception	2ch	LIN-USART 0/1
	with 16 byte RX- and TX-FIFO		
I <sup>2</sup> C		1ch	I <sup>2</sup> C 0
8/10-bit A/D Converter		27ch	AN 2 to 4/6 to 8/10 to 12/ 14 to 31
	with Data Buffer	No	
	with Range Comparator	Yes	
	with Scan Disable	Yes	
	with ADC Pulse Detection	Yes	
16-bit Reload Timer (RLT)		5ch	RLT 0 to 3/6
16-bit Free-Running Timer (FRT)		2ch	FRT 0/1
16-bit Input Capture Unit (ICU)		6ch (5 channels for LIN-USART)	ICU 0/1/4 to 7 (ICU 0/1/4 to 6 for LIN-USART)
16-bit Output Compare Unit (OCU)		4ch	OCU 0 to 3
8/16-bit Programmable Pulse Generator (PPG)		12ch (16-bit) / 16ch (8-bit)	PPG 0 to 7/12 to 15
	with Timing point capture	Yes	
	with Start delay	Yes	
	with Ramp	No	
Quadrature Position/Revolution Counter (QPRC)		2ch	QPRC 0/1
CAN Interface		1ch	CAN 0 32 Message Buffers
External Interrupts (INT)		16ch	INT 0 to 15
Non-Maskable Interrupt (NMI)		1ch	
Sound Generator (SG)		2ch	SG 0/1
LCD Controller		4COM x 36SEG	COM 0 to 3 SEG 0 to 4/7/11 to 28/30/ 33/36 to 45
Real Time Clock (RTC)		1ch	
I/O Ports		77 (Dual clock mode) 79 (Single clock mode)	
Clock Calibration Unit (CAL)		1ch	
Clock Output Function		2ch	
Low Voltage Detection Function		Yes	Low voltage detection function can be disabled by software
Hardware Watchdog Timer		Yes	
On-chip RC-oscillator		Yes	
On-chip Debugger		Yes	

**Note:**

All signals of the peripheral function in each product cannot be allocated by limiting the pins of package. It is necessary to use the port relocate function of the general I/O port according to your function use.

**2. Block Diagram**

### 3. Pin Assignment

\*1: CMOS input level only

\*2: CMOS input level only for I<sup>2</sup>C

\*3: Please set ROM Configuration Block (RCB) to use the subclock.

Other than those above, general-purpose pins have only Automotive input level.

#### 4. Pin Description

Pin name	Feature	Description
ADTG	ADC	A/D converter trigger input pin
AINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin
ANn	ADC	A/D converter channel n input pin
AVcc	Supply	Analog circuits power supply pin
AVRH	ADC	A/D converter high reference voltage input pin
AVRL	ADC	A/D converter low reference voltage input pin
AVss	Supply	Analog circuits power supply pin
BINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin
C	Voltage regulator	Internally regulated power supply stabilization capacitor pin
CKOTn	Clock Output function	Clock Output function n output pin
CKOTn_R	Clock Output function	Relocated Clock Output function n output pin
CKOTXn	Clock Output function	Clock Output function n inverted output pin
CKOTXn_R	Clock Output function	Relocated Clock Output function n inverted output pin
COMn	LCD	LCD Common driver pin
DEBUG I/F	OCD	On Chip Debugger input/output pin
FRCKn	Free-Running Timer	Free-Running Timer n input pin
FRCKn_R	Free-Running Timer	Relocated Free-Running Timer n input pin
INn	ICU	Input Capture Unit n input pin
INn_R	ICU	Relocated Input Capture Unit n input pin
INTn	External Interrupt	External Interrupt n input pin
INTn_R	External Interrupt	Relocated External Interrupt n input pin
MD	Core	Input pin for specifying the operating mode
NMI	External Interrupt	Non-Maskable Interrupt input pin
OUTn	OCU	Output Compare Unit n waveform output pin
OUTn_R	OCU	Relocated Output Compare Unit n waveform output pin
Pnn_m	GPIO	General purpose I/O pin
PPGn	PPG	Programmable Pulse Generator n output pin (16bit/8bit)
PPGn_R	PPG	Relocated Programmable Pulse Generator n output pin (16bit/8bit)
PPGn_B	PPG	Programmable Pulse Generator n output pin (16bit/8bit)
RSTX	Core	Reset input pin
RXn	CAN	CAN interface n RX input pin
SCKn	USART	USART n serial clock input/output pin
SCKn_R	USART	Relocated USART n serial clock input/output pin
SCLn	I <sup>2</sup> C	I <sup>2</sup> C interface n clock I/O input/output pin
SDAn	I <sup>2</sup> C	I <sup>2</sup> C interface n serial data I/O input/output pin
SEGn	LCD	LCD Segment driver pin
SGAn	Sound Generator	Sound Generator amplitude output pin
SGAn_R	Sound Generator	Relocated Sound Generator amplitude output pin
SGOn	Sound Generator	Sound Generator sound/tone output pin
SGOn_R	Sound Generator	Relocated Sound Generator sound/tone output pin
SINn	USART	USART n serial data input pin

Pin name	Feature	Description
SINn_R	USART	Relocated USART n serial data input pin
SOTn	USART	USART n serial data output pin
SOTn_R	USART	Relocated USART n serial data output pin
TINn	Reload Timer	Reload Timer n event input pin
TOTn	Reload Timer	Reload Timer n output pin
TTGn	PPG	Programmable Pulse Generator n trigger input pin
TXn	CAN	CAN interface n TX output pin
Vn	LCD	LCD voltage reference pin
Vcc	Supply	Power supply pin
Vss	Supply	Power supply pin
WOT	RTC	Real Time clock output pin
WOT_R	RTC	Relocated Real Time clock output pin
X0	Clock	Oscillator input pin
X0A	Clock	Subclock Oscillator input pin
X1	Clock	Oscillator output pin
X1A	Clock	Subclock Oscillator output pin
ZINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin

**5. Pin Circuit Type**

Pin no.	I/O circuit type*	Pin name
1	Supply	V <sub>ss</sub>
2	F	C
3	P	P03_7 / INT1 / SIN1 / SEG40
4	J	P13_0 / INT2 / SOT1 / SEG41
5	P	P13_1 / INT3 / SCK1 / SEG42

98	H	P03_5 / TX0
99	H	P03_6 / INT0 / NMI
100	Supply	V <sub>cc</sub>

\*: See "I/O Circuit Type" for details on the I/O circuit types.

**6. I/O Circuit Type**

Type	Circuit	Remarks
A	 <p style="text-align: center;">FCI or Osc disable</p>	<p>High-speed oscillation circuit:</p> <ul style="list-style-type: none"> <li>• Programmable between oscillation mode (external crystal or resonator connected to X0/X1 pins) and Fast external Clock Input (FCI) mode (external clock connected to X0 pin)</li> <li>• Feedback resistor = approx. 1.0MΩ</li> <li>• The amplitude: 1.8V±0.15V to operate by the internal supply voltage</li> </ul>

Type	Circuit	Remarks
B	 <p>The diagram for Type B shows a complex circuit. At the top, there is a pull-up resistor connected to a 'Pull-up control' signal. Below this, a P-channel MOSFET (P-ch) is connected to a 'Pout' signal, and an N-channel MOSFET (N-ch) is connected to an 'Nout' signal. A 'Standby control for input shutdown' signal is connected to a resistor 'R' and an AND gate. The output of the AND gate is connected to an 'Automotive input' through an inverter. Below this, there is a large rectangular block representing an oscillator circuit. It includes two external inputs, 'X1A' and 'X0A', each with a pull-up resistor 'R'. Inside the block, there are two inverters, a feedback loop, and a multiplexer with inputs '0' and '1' and a control signal 'FCI'. The output of the multiplexer is 'X out'. A control signal 'FCI or Osc disable' is connected to the oscillator block. At the bottom, there is another pull-up resistor and P-ch/N-ch MOSFET pair, similar to the top section, with 'Automotive input' and 'Standby control for input shutdown' signals.</p>	<p>Low-speed oscillation circuit shared with GPIO functionality:</p> <ul style="list-style-type: none"> <li>• Feedback resistor = approx. 5.0MΩ</li> <li>• GPIO functionality selectable (CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>), Automotive input with input shutdown function and programmable pull-up resistor)</li> </ul>
C	 <p>The diagram for Type C shows a simple circuit. A resistor 'R' is connected to a square symbol representing an input pin. The signal from the resistor goes into a dashed box containing two inverters connected in a hysteresis configuration. The output of the second inverter is labeled 'Hysteresis inputs'.</p>	<p>CMOS hysteresis input pin</p>

Type	Circuit	Remarks
F		Power supply input protection circuit
G		<ul style="list-style-type: none"> <li>• A/D converter ref+ (AVRH)/ ref- (AVRL) power supply input pin with protection circuit</li> <li>• Without protection circuit against <math>V_{CC}</math> for pins AVRH/AVRL</li> </ul>
H		<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• Automotive input with input shutdown function</li> <li>• Programmable pull-up resistor</li> </ul>
I		<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• CMOS hysteresis input with input shutdown function</li> <li>• Programmable pull-up resistor</li> <li>• Analog input</li> </ul>

Type	Circuit	Remarks
J		<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• Automotive input with input shutdown function</li> <li>• Programmable pull-up resistor</li> <li>• SEG or COM output</li> </ul>
K		<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• Automotive input with input shutdown function</li> <li>• Programmable pull-up resistor</li> <li>• Analog input</li> </ul>
L		<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• Automotive input with input shutdown function</li> <li>• Programmable pull-up resistor</li> <li>• Vn input or SEG output</li> </ul>

Type	Circuit	Remarks
M	 <p>The diagram shows a CMOS output stage. A pull-up resistor is connected to the output node. Two P-channel MOSFETs (P-ch) are connected to the output node, controlled by a 'Pull-up control' signal. An N-channel MOSFET (N-ch) is connected to the output node and ground, controlled by 'Nout'. A 'Standby control for input shutdown' signal is connected to the input of an AND gate. The other input of the AND gate is connected to the output node through a resistor 'R'. The output of the AND gate is connected to the input of an inverter, which is labeled 'Hysteresis input'.</p>	<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>• CMOS hysteresis input with input shutdown function</li> <li>• Programmable pull-up resistor</li> </ul>
N	 <p>The diagram is similar to Type M, but the N-channel MOSFET is labeled 'Nout*'. The 'Standby control for input shutdown' signal is connected to the input of an AND gate. The other input of the AND gate is connected to the output node through a resistor 'R'. The output of the AND gate is connected to the input of an inverter, which is labeled 'Hysteresis input'.</p>	<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 3\text{mA}</math>, <math>I_{OH} = -3\text{mA}</math>)</li> <li>• CMOS hysteresis input with input shutdown function</li> <li>• Programmable pull-up resistor</li> </ul> <p>*: N-channel transistor has slew rate control according to I<sup>2</sup>C spec, irrespective of usage.</p>
O	 <p>The diagram shows an open-drain output stage. An N-channel MOSFET (N-ch) is connected to the output node and ground, controlled by 'Nout'. A resistor 'R' is connected to the output node and the input of an AND gate. The other input of the AND gate is connected to the output node through a resistor 'R'. The output of the AND gate is connected to the input of an inverter, which is labeled 'TTL input'. A 'Standby control for input shutdown' signal is connected to the input of the AND gate.</p>	<ul style="list-style-type: none"> <li>• Open-drain I/O</li> <li>• Output 25mA, <math>V_{CC} = 2.7\text{V}</math></li> <li>• TTL input</li> </ul>

Type	Circuit	Remarks

00:0100 <sub>H</sub>	DMA
00:00F0 <sub>H</sub>	Reserved
00:0000 <sub>H</sub>	Peripheral

\*1: For details about USER ROM area, see “User Rom Memory Map for Flash Devices” on the following pages.

\*2: For RAMSTART Addresses, see the table on the next page.

\*3: Unused GPR banks can be used as RAM area.

GPR: General-Purpose Register

The DMA area is only available if the device contains the corresponding resource.

The available RAM and ROM area depends on the device.

**8. RAMSTART Addresses**

<b>Devices</b>	<b>Bank 0 RAM size</b>	<b>RAMSTART0</b>

## 12. Handling Precautions

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Cypress semiconductor devices.

### 12.1 Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

#### ■ Absolute Maximum Ratings

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

#### ■ Recommended Operating Conditions

Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

#### ■ Processing and Protection of Pins

These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

##### 1. Preventing Over-Voltage and Over-Current Conditions

Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.

##### 2. Protection of Output Pins

Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device. Therefore, avoid this type of connection.

##### 3. Handling of Unused Input Pins

Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

#### ■ Latch-up

Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNP junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

**CAUTION:** The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:

1. Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.
2. Be sure that abnormal current flows do not occur during the power-on sequence.

#### ■ Observance of Safety Regulations and Standards

Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.

#### ■ Fail-Safe Design

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

**■ Precautions Related to Usage of Devices**

Cypress semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION: Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

**12.2 Precautions for Package Mounting**

Package mounting may be either lead insertion type or surface mount type. In either case, for heat resistance during soldering, you should only mount under Cypress's recommended conditions. For detailed information about mount conditions, contact your sales representative.

**■ Lead Insertion Type**

Mounting of lead insertion type packages onto printed circuit boards may be done by two methods: direct soldering on the board, or mounting by using a socket.

Direct mounting onto boards normally involves processes for inserting leads into through-holes on the board and using the flow soldering (wave soldering) method of applying liquid solder. In this case, the soldering process usually causes leads to be subjected to thermal stress in excess of the absolute ratings for storage temperature. Mounting processes should conform to Cypress recommended mounting conditions.

If socket mounting is used, differences in surface treatment of the socket contacts and IC lead surfaces can lead to contact deterioration after long periods. For this reason it is recommended that the surface treatment of socket contacts and IC leads be verified before mounting.

**■ Surface Mount Type**

Surface mount packaging has longer and thinner leads than lead-insertion packaging, and therefore leads are more easily deformed or bent. The use of packages with higher pin counts and narrower pin pitch results in increased susceptibility to open connections caused by deformed pins, or shorting due to solder bridges.

You must use appropriate mounting techniques. Cypress recommends the solder reflow method, and has established a ranking of mounting conditions for each product. Users are advised to mount packages in accordance with Cypress ranking of recommended conditions.

**■ Lead-Free Packaging**

CAUTION: When ball grid array (BGA) packages with Sn-Ag-Cu balls are mounted using Sn-Pb eutectic soldering, junction strength may be reduced under some conditions of use.

**■ Storage of Semiconductor Devices**

Because plastic chip packages are formed from plastic resins, exposure to natural environmental conditions will cause absorption of moisture. During mounting, the application of heat to a package that has absorbed moisture can cause surfaces to peel, reducing moisture resistance and causing packages to crack. To prevent, do the following:

1. Avoid exposure to rapid temperature changes, which cause moisture to condense inside the product. Store products in locations where temperature changes are slight.
2. Use dry boxes for product storage. Products should be stored below 70% relative humidity, and at temperatures between 5°C and 30°C.  
When you open Dry Package that recommends humidity 40% to 70% relative humidity.
3. When necessary, Cypress packages semiconductor devices in highly moisture-resistant aluminum laminate bags, with a silica gel desiccant. Devices should be sealed in their aluminum laminate bags for storage.
4. Avoid storing packages where they are exposed to corrosive gases or high levels of dust.

**■ Baking**

Packages that have absorbed moisture may be de-moisturized by baking (heat drying). Follow the Cypress recommended conditions for baking.

Condition: 125°C/24 h

**■ Static Electricity**

Because semiconductor devices are particularly susceptible to damage by static electricity, you must take the following precautions:

1. Maintain relative humidity in the working environment between 40% and 70%. Use of an apparatus for ion generation may be needed to remove electricity.
2. Electrically ground all conveyors, solder vessels, soldering irons and peripheral equipment.
3. Eliminate static body electricity by the use of rings or bracelets connected to ground through high resistance (on the level of 1 MΩ).  
Wearing of conductive clothing and shoes, use of conductive floor mats and other measures to minimize shock loads is recommended.
4. Ground all fixtures and instruments, or protect with anti-static measures.
5. Avoid the use of Styrofoam or other highly static-prone materials for storage of completed board assemblies.

**12.3 Precautions for Use Environment**

Reliability of semiconductor devices depends on ambient temperature and other conditions as described above.

For reliable performance, do the following:

1. Humidity  
Prolonged use in high humidity can lead to leakage in devices as well as printed circuit boards. If high humidity levels are anticipated, consider anti-humidity processing.
2. Discharge of Static Electricity  
When high-voltage charges exist close to semiconductor devices, discharges can cause abnormal operation. In such cases, use anti-static measures or processing to prevent discharges.
3. Corrosive Gases, Dust, or Oil  
Exposure to corrosive gases or contact with dust or oil may lead to chemical reactions that will adversely affect the device. If you use devices in such conditions, consider ways to prevent such exposure or to protect the devices.
4. Radiation, Including Cosmic Radiation  
Most devices are not designed for environments involving exposure to radiation or cosmic radiation. Users should provide shielding as appropriate.
5. Smoke, Flame  
**CAUTION:** Plastic molded devices are flammable, and therefore should not be used near combustible substances.  
If devices begin to smoke or burn, there is danger of the release of toxic gases.

Customers considering the use of Cypress products in other special environmental conditions should consult with sales representatives.

### 13. Handling Devices

**Special care is required for the following when handling the device:**

- Latch-up prevention
- Unused pins handling
- External clock usage
- Notes on PLL clock mode operation
- Power supply pins ( $V_{CC}/V_{SS}$ )
- Crystal oscillator and ceramic resonator circuit
- Turn on sequence of power supply to A/D converter and analog inputs
- Pin handling when not using the A/D converter
- Notes on Power-on
- Stabilization of power supply voltage
- Serial communication
- Mode Pin (MD)

#### 13.1 Latch-up prevention

CMOS IC chips may suffer latch-up under the following conditions:

- A voltage higher than VCC or lower than VSS is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between Vcc pins and Vss pins.
- The AVCC power supply is applied before the VCC voltage.

Latch-up may increase the power supply current dramatically, causing thermal damages to the device.

For the same reason, extra care is required to not let the analog power-supply voltage ( $AV_{CC}$ ,  $AVRH$ ) exceed the digital power-supply voltage.

#### 13.2 Unused pins handling

Unused input pins can be left open when the input is disabled (corresponding bit of Port Input Enable register PIER = 0).

Leaving unused input pins open when the input is enabled may result in misbehavior and possible permanent damage of the device. To prevent latch-up, they must therefore be pulled up or pulled down through resistors which should be more than  $2k\Omega$ .

Unused bidirectional pins can be set either to the output state and be then left open, or to the input state with either input disabled or external pull-up/pull-down resistor as described above.

#### 13.3 External clock usage

The permitted frequency range of an external clock depends on the oscillator type and configuration.

See AC Characteristics for detailed modes and frequency limits. Single and opposite phase external clocks must be connected as follows:

##### 13.3.1 Single phase external clock for Main oscillator

When using a single phase external clock for the Main oscillator, X0 pin must be driven and X1 pin left open.

And supply 1.8V power to the external clock.

### 13.3.2 Single phase external clock for Sub oscillator

When using a single phase external clock for the Sub oscillator, “External clock mode” must be selected and X0A/P04\_0 pin must be driven. X1A/P04\_1 pin can be configured as GPIO.

### 13.3.3 Opposite phase external clock

When using an opposite phase external clock, X1 (X1A) pins must be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins. Supply level on X0 and X1 pins must be 1.8V.

### 13.4 Notes on PLL clock mode operation

If the microcontroller is operated with PLL clock mode and no external oscillator is operating or no external clock is supplied, the microcontroller attempts to work with the free oscillating PLL. Performance of this operation, however, cannot be guaranteed.

### 13.5 Power supply pins ( $V_{CC}/V_{SS}$ )

It is required that all  $V_{CC}$ -level as well as all  $V_{SS}$ -level power supply pins are at the same potential. If there is more than one  $V_{CC}$  or  $V_{SS}$  level, the device may operate incorrectly or be damaged even within the guaranteed operating range.

$V_{CC}$  and  $V_{SS}$  pins must be connected to the device from the power supply with lowest possible impedance.

The smoothing capacitor at  $V_{CC}$  pin must use the one of a capacity value that is larger than  $C_s$ .

Besides this, as a measure against power supply noise, it is required to connect a bypass capacitor of about 0.1  $\mu\text{F}$  between  $V_{CC}$  and  $V_{SS}$  pins as close as possible to  $V_{CC}$  and  $V_{SS}$  pins.

### 13.6 Crystal oscillator and ceramic resonator circuit

Noise at X0, X1 pins or X0A, X1A pins might cause abnormal operation. It is required to provide bypass capacitors with shortest possible distance to X0, X1 pins and X0A, X1A pins, crystal oscillator (or ceramic resonator) and ground lines and to the utmost effort, that the lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0, X1 pins and X0A, X1A pins with a ground area for stabilizing the operation.

It is highly recommended to evaluate the quartz/MCU or resonator/MCU system at the quartz or resonator manufacturer, especially when using low-Q resonators at higher frequencies.

### 13.7 Turn on sequence of power supply to A/D converter and analog inputs

It is required to turn the A/D converter power supply ( $AV_{CC}$ ,  $AVRH$ ,  $AVRL$ ) and analog inputs ( $ANn$ ) on after turning the digital power supply ( $V_{CC}$ ) on.

It is also required to turn the digital power off after turning the A/D converter supply and analog inputs off. In this case,  $AVRH$  must not exceed  $AV_{CC}$ . Input voltage for ports shared with analog input ports also must not exceed  $AV_{CC}$  (turning the analog and digital power supplies simultaneously on or off is acceptable).

**13.8 Pin handling when not using the A/D converter**

If the A/D converter is not used, the power supply pins for A/D converter should be connected such as  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVRH = AVR_L = V_{SS}$ .

**13.9 Notes on Power-on**

To prevent malfunction of the internal voltage regulator, supply voltage profile while turning the power supply on should be slower than  $50\mu\text{s}$  from 0.2V to 2.7V.

**13.10 Stabilization of power supply voltage**

If the power supply voltage varies acutely even within the operation safety range of the  $V_{CC}$  power supply voltage, a malfunction may occur. The  $V_{CC}$  power supply voltage must therefore be stabilized. As stabilization guidelines, the power supply voltage must be stabilized in such a way that  $V_{CC}$  ripple fluctuations (peak to peak value) in the commercial frequencies (50Hz to 60Hz) fall within 10% of the standard  $V_{CC}$  power supply voltage and the transient fluctuation rate becomes  $0.1\text{V}/\mu\text{s}$  or less in instantaneous fluctuation for power supply switching.

**13.11 Serial communication**

There is a possibility to receive wrong data due to noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Consider receiving of wrong data when designing the system. For example apply a checksum and retransmit the data if an error occurs.

**13.12 Mode Pin (MD)**

Connect the mode pin directly to  $V_{CC}$  or  $V_{SS}$  pin. To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the mode pin to  $V_{CC}$  or  $V_{SS}$  pin and provide a low-impedance connection.

## 14. Electrical Characteristics

### 14.1 Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating		Unit	Remarks
			Min	Max		
Power supply voltage* <sup>1</sup>	V <sub>CC</sub>	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	
Analog power supply voltage* <sup>1</sup>	AV <sub>CC</sub>	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	V <sub>CC</sub> = AV <sub>CC</sub> * <sup>2</sup>
Analog reference voltage* <sup>1</sup>	AVRH, AVRL	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	AV <sub>CC</sub> ≥ AVRH, AV <sub>CC</sub> ≥ AVRL, AVRH > AVRL, AVRL ≥ AV <sub>SS</sub>
LCD power supply voltage* <sup>1</sup>	V0 to V3	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	V0 to V3 must not exceed V <sub>CC</sub>
Input voltage* <sup>1</sup>	V <sub>I</sub>	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	V <sub>I</sub> ≤ V <sub>CC</sub> + 0.3V* <sup>3</sup>
Output voltage* <sup>1</sup>	V <sub>O</sub>	-	V <sub>SS</sub> - 0.3	V <sub>SS</sub> + 6.0	V	V <sub>O</sub> ≤ V <sub>CC</sub> + 0.3V* <sup>3</sup>
Maximum Clamp Current	I <sub>CLAMP</sub>	-	-4.0	+4.0	mA	Applicable to general purpose I/O pins * <sup>4</sup>
Total Maximum Clamp Current	Σ I <sub>CLAMP</sub>	-	-	26	mA	Applicable to general purpose I/O pins * <sup>4</sup>
"L" level maximum output current	I <sub>OL</sub>	-	-	15	mA	Normal port
	I <sub>OLHCO</sub>	-	-	20	mA	High current port
"L" level average output current	I <sub>OLAV</sub>	-	-	4	mA	Normal port
	I <sub>OLAVHCO</sub>	-	-	15	mA	High current port
"L" level maximum overall output current	ΣI <sub>OL</sub>	-	-	64	mA	Normal port
	ΣI <sub>OLHCO</sub>	-	-	150	mA	High current port
"L" level average overall output current	ΣI <sub>OLAV</sub>	-	-	32	mA	Normal port
	ΣI <sub>OLAVHCO</sub>	-	-	100	mA	High current port
"H" level maximum output current	I <sub>OH</sub>	-	-	-15	mA	Normal port
	I <sub>OHCO</sub>	-	-	-20	mA	High current port
"H" level average output current	I <sub>OHAV</sub>	-	-	-4	mA	Normal port
	I <sub>OHAVHCO</sub>	-	-	-15	mA	High current port
"H" level maximum overall output current	ΣI <sub>OH</sub>	-	-	-64	mA	Normal port
	ΣI <sub>OHCO</sub>	-	-	-150	mA	High current port
"H" level average overall output current	ΣI <sub>OHAV</sub>	-	-	-32	mA	Normal port
	ΣI <sub>OHAVHCO</sub>	-	-	-100	mA	High current port
Power consumption* <sup>5</sup>	P <sub>D</sub>	T <sub>A</sub> = +125°C	-	416* <sup>6</sup>	mW	
Operating ambient temperature	T <sub>A</sub>	-	-40	+125* <sup>7</sup>	°C	
Storage temperature	T <sub>STG</sub>	-	-55	+150	°C	

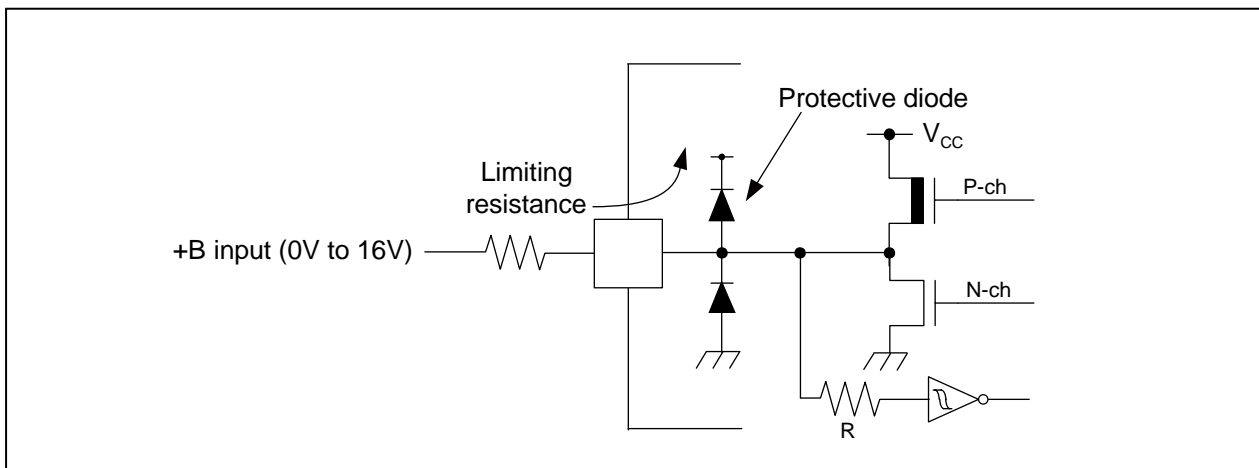

\*1: This parameter is based on V<sub>SS</sub> = AV<sub>SS</sub> = 0V.

\*2: AV<sub>CC</sub> and V<sub>CC</sub> must be set to the same voltage. It is required that AV<sub>CC</sub> does not exceed V<sub>CC</sub> and that the voltage at the analog inputs does not exceed AV<sub>CC</sub> when the power is switched on.

\*3: V<sub>I</sub> and V<sub>O</sub> should not exceed V<sub>CC</sub> + 0.3V. V<sub>I</sub> should also not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the I<sub>CLAMP</sub> rating supersedes the V<sub>I</sub> rating. Input/Output voltages of general I/O ports depend on V<sub>CC</sub>.

\*4: Applicable to all general purpose I/O pins (Pnn\_m).

- Use within recommended operating conditions.
- Use at DC voltage (current).
- The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
- The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the VCC pin, and this may affect other devices.
- Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0V), the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset.
- The DEBUG I/F pin has only a protective diode against VSS. Hence it is only permitted to input a negative clamping current (4mA). For protection against positive input voltages, use an external clamping diode which limits the input voltage to maximum 6.0V.
- Sample recommended circuits:

\*5: The maximum permitted power dissipation depends on the ambient temperature, the air flow velocity and the thermal conductance of the package on the PCB.

The actual power dissipation depends on the customer application and can be calculated as follows:

$$P_D = P_{IO} + P_{INT}$$

$$P_{IO} = \sum (V_{OL} \times I_{OL} + V_{OH} \times I_{OH}) \text{ (I/O load power dissipation, sum is performed on all I/O ports)}$$

$$P_{INT} = V_{CC} \times (I_{CC} + I_A) \text{ (internal power dissipation)}$$

$I_{CC}$  is the total core current consumption into  $V_{CC}$  as described in the “DC characteristics” and depends on the selected operation mode and clock frequency and the usage of functions like Flash programming.

$I_A$  is the analog current consumption into  $AV_{CC}$ .

\*6: Worst case value for a package mounted on single layer PCB at specified  $T_A$  without air flow.

\*7: Write/erase to a large sector in flash memory is warranted with  $T_A \leq +105^\circ\text{C}$ .

## WARNING

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

**14.2 Recommended Operating Conditions**

 (V<sub>SS</sub> = AV<sub>SS</sub> = 0V)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V <sub>CC</sub> , AV <sub>CC</sub>	2.7	-	5.5	V	
		2.0	-	5.5	V	Maintains RAM data in stop mode
Smoothing capacitor at C pin	C <sub>S</sub>	0.5	1.0 to 3.9	4.7	μF	1.0μF (Allowance within ± 50%) 3.9μF (Allowance within ± 20%) Please use the ceramic capacitor or the capacitor of the frequency response of this level. The smoothing capacitor at V <sub>CC</sub> must use the one of a capacity value that is larger than C <sub>S</sub> .

**WARNING**

The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges. Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

**14.3 DC Characteristics**
**14.3.1 Current Rating**
 $(V_{CC} = AV_{CC} = 2.7V \text{ to } 5.5V, V_{SS} = AV_{SS} = 0V, T_A = -40^\circ C \text{ to } +125^\circ C)$

SCK rise time	t <sub>R</sub>	SCKn		-	20	-	20	ns

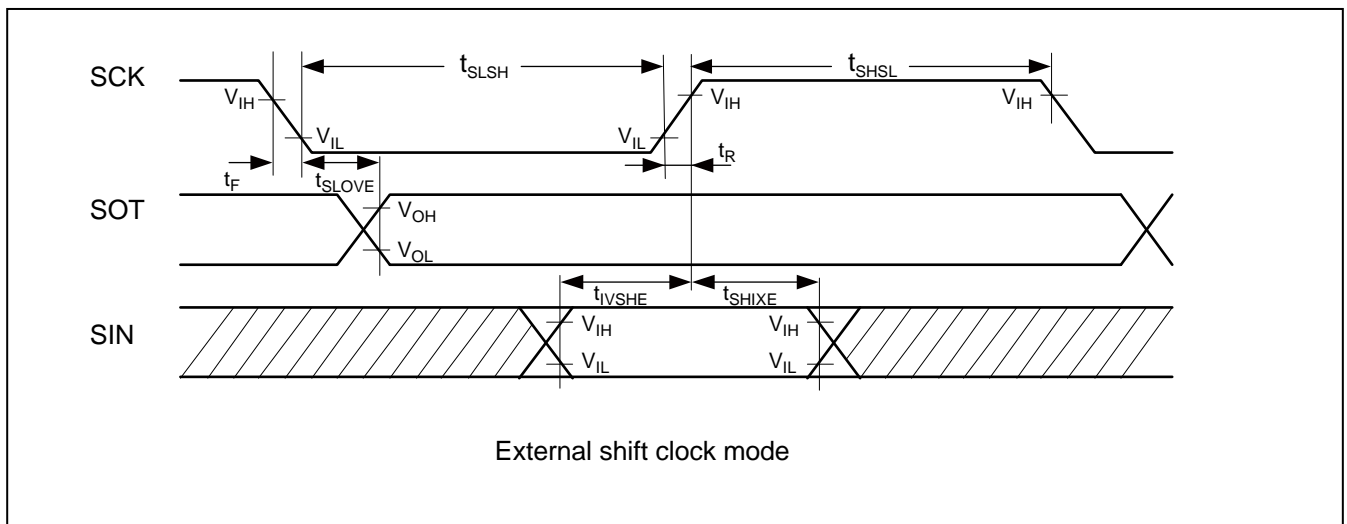

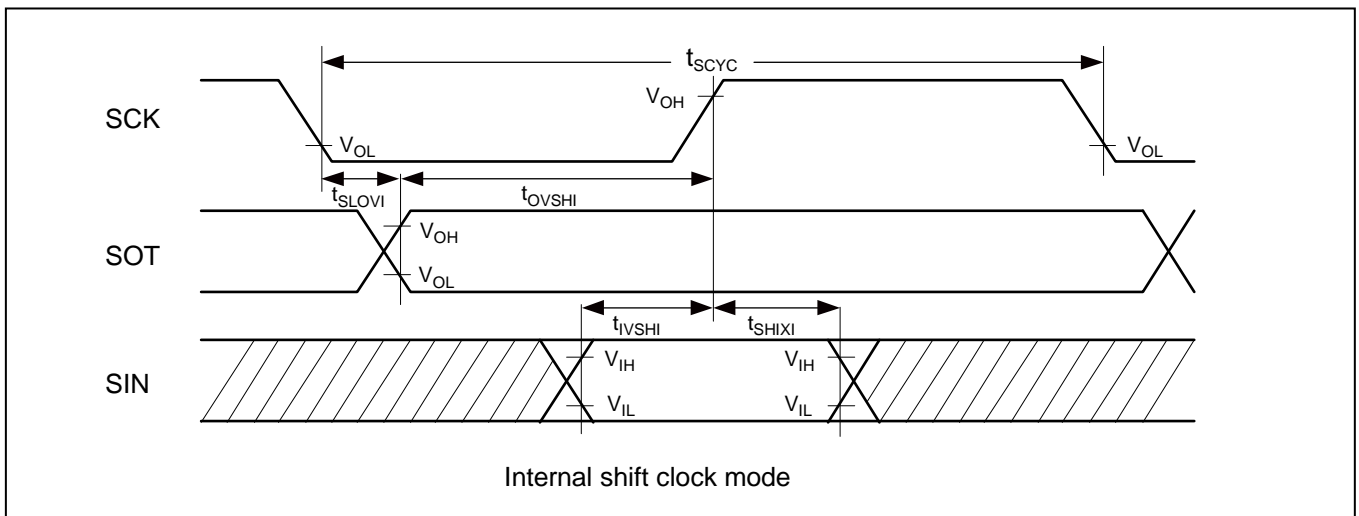

**Notes:**

- AC characteristic in CLK synchronized mode.
- C<sub>L</sub> is the load capacity value of pins when testing.
- Depending on the used machine clock frequency, the maximum possible baud rate can be limited by some parameters. These parameters are shown in "MB96600 series HARDWARE MANUAL".
- t<sub>CLKP1</sub> indicates the peripheral clock 1 (CLKP1), Unit: ns
- These characteristics only guarantee the same relocate port number.  
For example, the combination of SCKn and SOTn\_R is not guaranteed.

\*: Parameter N depends on t<sub>SCYC</sub> and can be calculated as follows:

- If t<sub>SCYC</sub> = 2 × k × t<sub>CLKP1</sub>, then N = k, where k is an integer > 2
- If t<sub>SCYC</sub> = (2 × k + 1) × t<sub>CLKP1</sub>, then N = k + 1, where k is an integer > 1

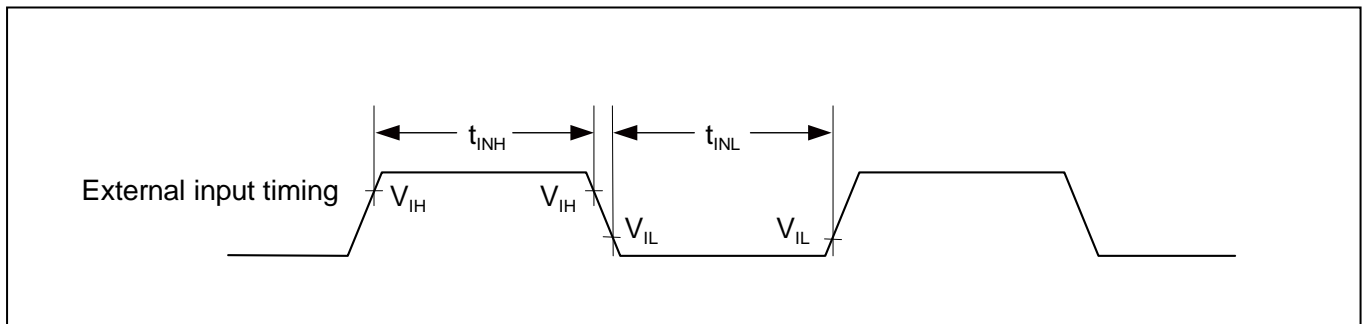

$t_{scyc}$	N
$4 \times t_{CLKP1}$	2
$5 \times t_{CLKP1}, 6 \times t_{CLKP1}$	3
$7 \times t_{CLKP1}, 8 \times t_{CLKP1}$	4
...	...

**14.4.9 External Input Timing**

 (V<sub>CC</sub> = AV<sub>CC</sub> = 2.7V to 5.5V, V<sub>SS</sub> = AV<sub>SS</sub> = 0V, T<sub>A</sub> = - 40°C to + 125°C)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Input pulse width	t <sub>INH</sub> , t <sub>INL</sub>	Pnn_m	2t <sub>CLKP1</sub> + 200 (t <sub>CLKP1</sub> = 1/f <sub>CLKP1</sub> )*	-	ns	General Purpose I/O
		ADTG				A/D Converter trigger input
		TINn				Reload Timer
		TTGn				PPG trigger input
		FRCKn, FRCKn_R				Free-Running Timer input clock
		INn, INn_R				Input Capture
		AINn, BINn, ZINn				Quadrature Position/Revolution Counter
		INTn, INTn_R				External Interrupt
		NMI				Non-Maskable Interrupt
				200	-	ns

 \*: t<sub>CLKP1</sub> indicates the peripheral clock1 (CLKP1) cycle time except stop when in stop mode.

**14.4.10 I<sup>2</sup>C Timing**

 (V<sub>CC</sub> = AV<sub>CC</sub> = 2.7V to 5.5V, V<sub>SS</sub> = AV<sub>SS</sub> = 0V, T<sub>A</sub> = - 40°C to + 125°C)

Parameter	Symbol	Conditions	Typical mode		High-speed mode <sup>*4</sup>		Unit
			Min	Max	Min	Max	
SCL clock frequency	f <sub>SCL</sub>	C <sub>L</sub> = 50pF, R = (V <sub>p</sub> /I <sub>OL</sub> )* <sup>1</sup>	0	100	0	400	kHz
(Repeated) START condition hold time SDA ↓ → SCL ↓	t <sub>HDSTA</sub>		4.0	-	0.6	-	μs
SCL clock "L" width	t <sub>LOW</sub>		4.7	-	1.3	-	μs
SCL clock "H" width	t <sub>HIGH</sub>		4.0	-	0.6	-	μs
(Repeated) START condition setup time SCL ↑ → SDA ↓	t <sub>SUSTA</sub>		4.7	-	0.6	-	μs
Data hold time SCL ↓ → SDA ↓ ↑	t <sub>HDDAT</sub>		0	3.45 <sup>*2</sup>	0	0.9 <sup>*3</sup>	μs
Data setup time SDA ↓ ↑ → SCL ↑	t <sub>SUDAT</sub>		250	-	100	-	ns
STOP condition setup time SCL ↑ → SDA ↑	t <sub>SUSTO</sub>		4.0	-	0.6	-	μs
Bus free time between "STOP condition" and "START condition"	t <sub>BUS</sub>		4.7	-	1.3	-	μs
Pulse width of spikes which will be suppressed by input noise filter	t <sub>SP</sub>		-	0	(1-1.5) × t <sub>CLKP1</sub> <sup>*5</sup>	0	(1-1.5) × t <sub>CLKP1</sub> <sup>*5</sup>

<sup>\*1</sup>: R and C<sub>L</sub> represent the pull-up resistance and load capacitance of the SCL and SDA lines, respectively.

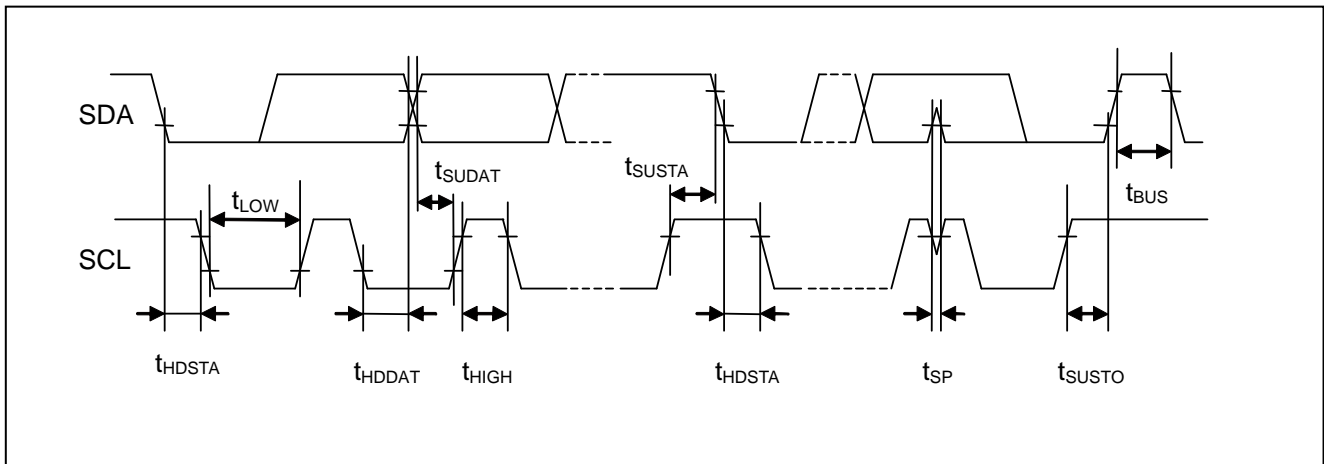

V<sub>p</sub> indicates the power supply voltage of the pull-up resistance and I<sub>OL</sub> indicates V<sub>OL</sub> guaranteed current.

<sup>\*2</sup>: The maximum t<sub>HDDAT</sub> only has to be met if the device does not extend the "L" width (t<sub>LOW</sub>) of the SCL signal.

<sup>\*3</sup>: A high-speed mode I<sup>2</sup>C bus device can be used on a standard mode I<sup>2</sup>C bus system as long as the device satisfies the requirement of "t<sub>SUDAT</sub> ≥ 250ns".

<sup>\*4</sup>: For use at over 100 kHz, set the peripheral clock1 (CLKP1) to at least 6MHz.

<sup>\*5</sup>: t<sub>CLKP1</sub> indicates the peripheral clock1 (CLKP1) cycle time.

### 14.5.2 Accuracy and Setting of the A/D Converter Sampling Time

If the external impedance is too high or the sampling time too short, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting the A/D conversion precision.

To satisfy the A/D conversion precision, a sufficient sampling time must be selected. The required sampling time ( $T_{\text{samp}}$ ) depends on the external driving impedance  $R_{\text{ext}}$ , the board capacitance of the A/D converter input pin  $C_{\text{ext}}$  and the  $AV_{\text{CC}}$  voltage level. The following replacement model can be used for the calculation:

$R_{\text{ext}}$ : External driving impedance

$C_{\text{ext}}$ : Capacitance of PCB at A/D converter input

$C_{\text{VIN}}$ : Analog input capacity (I/O, analog switch and ADC are contained)

$R_{\text{VIN}}$ : Analog input impedance (I/O, analog switch and ADC are contained)

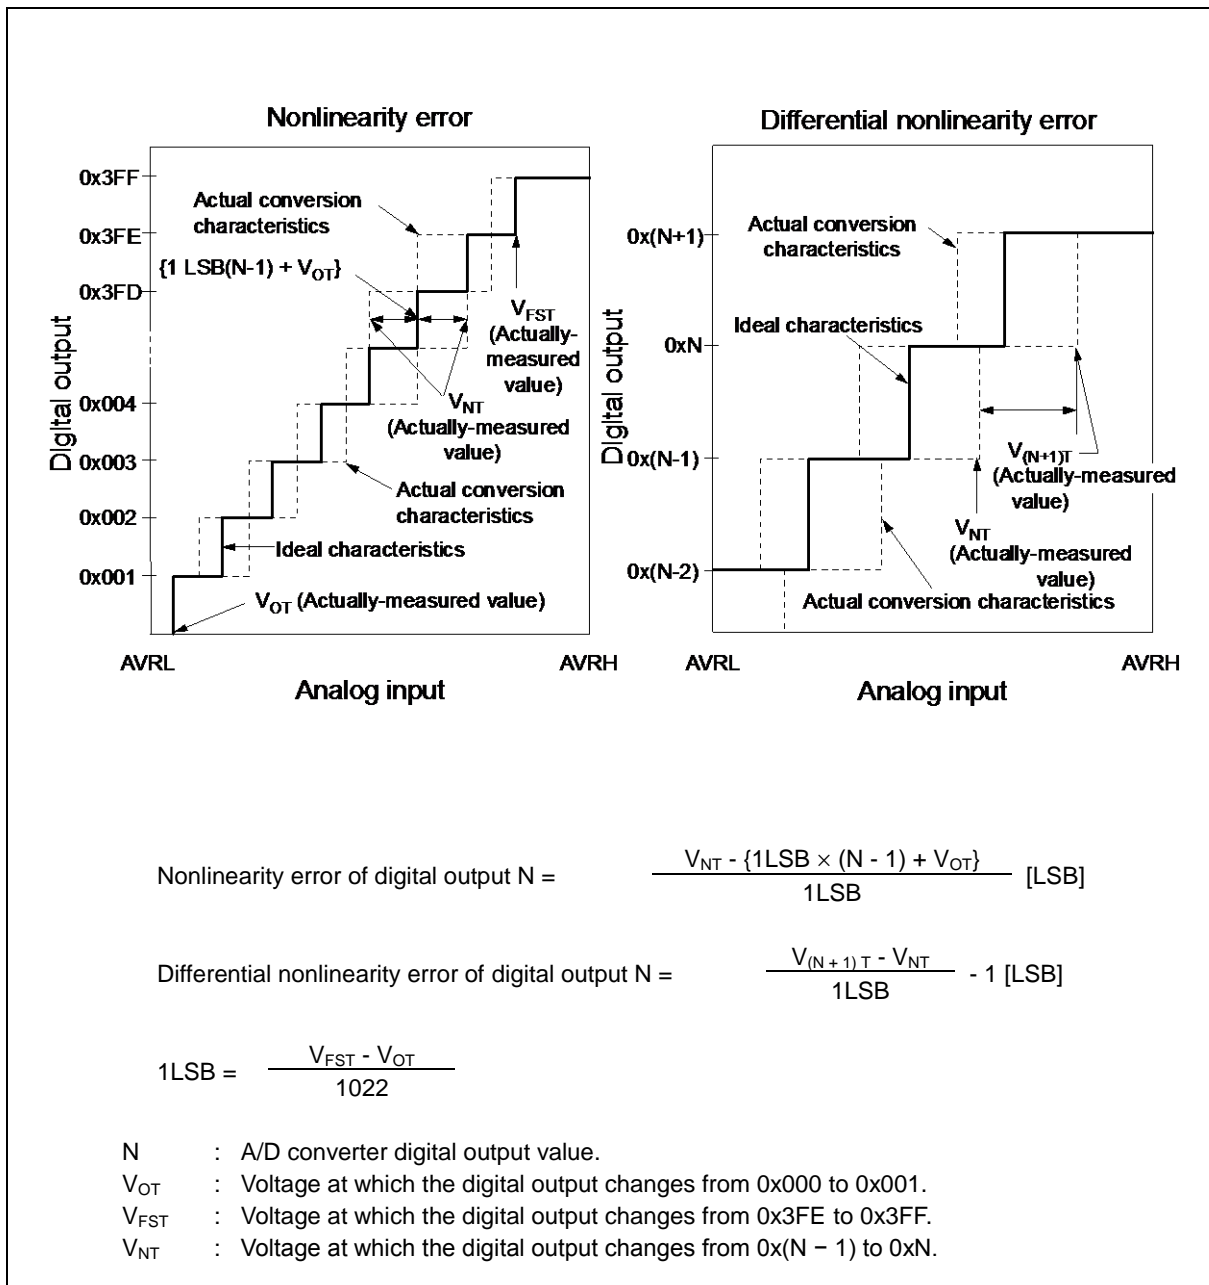

The following approximation formula for the replacement model above can be used:

$$T_{\text{samp}} = 7.62 \times (R_{\text{ext}} \times C_{\text{ext}} + (R_{\text{ext}} + R_{\text{VIN}}) \times C_{\text{VIN}})$$

- Do not select a sampling time below the absolute minimum permitted value.  
( $0.5\mu\text{s}$  for  $4.5\text{V} \leq AV_{\text{CC}} \leq 5.5\text{V}$ ,  $1.2\mu\text{s}$  for  $2.7\text{V} \leq AV_{\text{CC}} < 4.5\text{V}$ )
- If the sampling time cannot be sufficient, connect a capacitor of about  $0.1\mu\text{F}$  to the analog input pin.
- A big external driving impedance also adversely affects the A/D conversion precision due to the pin input leakage current IIL (static current before the sampling switch) or the analog input leakage current IAIN (total leakage current of pin input and comparator during sampling). The effect of the pin input leakage current IIL cannot be compensated by an external capacitor.
- The accuracy gets worse as  $|AV_{\text{RH}} - AV_{\text{RL}}|$  becomes smaller.

14.5.3 Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Nonlinearity error : Deviation of the actual conversion characteristics from a straight line that connects the zero transition point (0b0000000000 ↔ 0b0000000001) to the full-scale transition point (0b1111111110 ↔ 0b1111111111).
- Differential nonlinearity error : Deviation from the ideal value of the input voltage that is required to change the output code by 1LSB.
- Total error : Difference between the actual value and the theoretical value. The total error includes zero transition error, full-scale transition error and nonlinearity error.
- Zero transition voltage : Input voltage which results in the minimum conversion value.
- Full scale transition voltage: Input voltage which results in the maximum conversion value.

$$1\text{LSB (Ideal value)} = \frac{\text{AVRH} - \text{AVRL}}{1024} \text{ [V]}$$

$$\text{Total error of digital output N} = \frac{V_{\text{NT}} - \{1\text{LSB} \times (\text{N} - 1) + 0.5\text{LSB}\}}{1\text{LSB}}$$

N : A/D converter digital output value.

$V_{\text{NT}}$  : Voltage at which the digital output changes from  $0x(\text{N} + 1)$  to  $0x\text{N}$ .

$V_{\text{OT}}$  (Ideal value) =  $\text{AVRL} + 0.5\text{LSB}$ [V]

$V_{\text{FST}}$  (Ideal value) =  $\text{AVRH} - 1.5\text{LSB}$ [V]

**14.6 High Current Output Slew Rate**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Output rise/fall time	$t_{R20}$ , $t_{F20}$	P08_m, P09_m, P10_m	Outputs driving strength set to "20mA"	15	-	75	ns	$C_L=85pF$

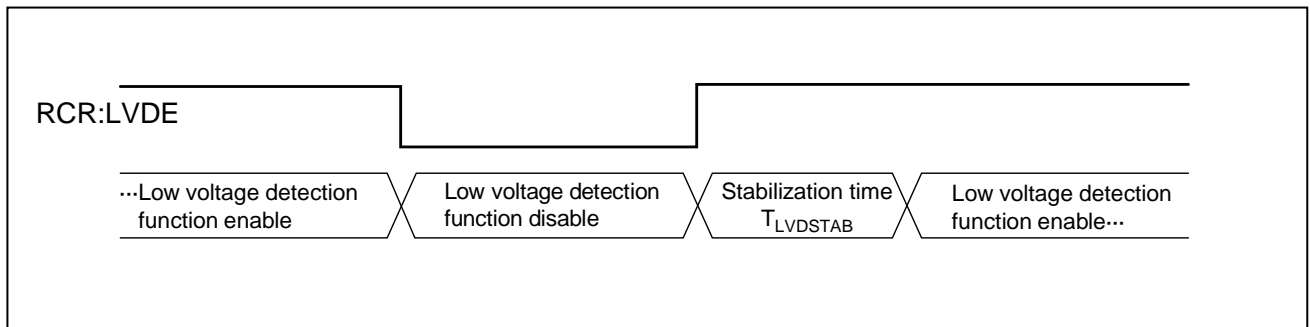

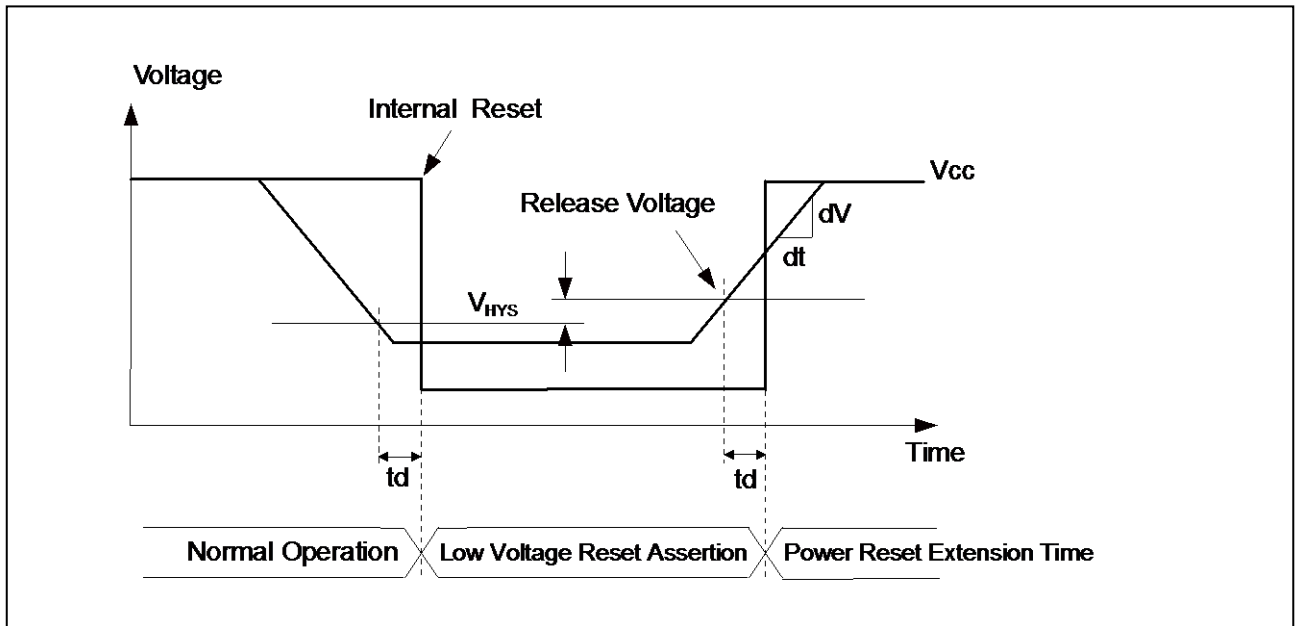

**14.7 Low Voltage Detection Function Characteristics**
 $(V_{CC} = AV_{CC} = 2.7V \text{ to } 5.5V, V_{SS} = AV_{SS} = 0V, T_A = -40^{\circ}C \text{ to } +125^{\circ}C)$ 

Parameter	Symbol	Conditions	Value			Unit
			Min	Typ	Max	
Detected voltage <sup>*1</sup>	$V_{DL0}$	CILCR:LVL = 0000 <sub>B</sub>	2.70	2.90	3.10	V
	$V_{DL1}$	CILCR:LVL = 0001 <sub>B</sub>	2.79	3.00	3.21	V
	$V_{DL2}$	CILCR:LVL = 0010 <sub>B</sub>	2.98	3.20	3.42	V
	$V_{DL3}$	CILCR:LVL = 0011 <sub>B</sub>	3.26	3.50	3.74	V
	$V_{DL4}$	CILCR:LVL = 0100 <sub>B</sub>	3.45	3.70	3.95	V
	$V_{DL5}$	CILCR:LVL = 0111 <sub>B</sub>	3.73	4.00	4.27	V
	$V_{DL6}$	CILCR:LVL = 1001 <sub>B</sub>	3.91	4.20	4.49	V
Power supply voltage change rate <sup>*2</sup>	dV/dt	-	- 0.004	-	+ 0.004	V/ $\mu$ s
Hysteresis width	$V_{HYS}$	CILCR:LVHYS=0	-	-	50	mV
		CILCR:LVHYS=1	80	100	120	mV
Stabilization time	$T_{LVDSTAB}$	-	-	-	75	$\mu$ s
Detection delay time	$t_d$	-	-	-	30	$\mu$ s

\*1: If the power supply voltage fluctuates within the time less than the detection delay time ( $t_d$ ), there is a possibility that the low voltage detection will occur or stop after the power supply voltage passes the detection range.

\*2: In order to perform the low voltage detection at the detection voltage ( $V_{DLX}$ ), be sure to suppress fluctuation of the power supply voltage within the limits of the change ration of power supply voltage.

**14.8 Flash Memory Write/Erase Characteristics**
 $(V_{CC} = AV_{CC} = 2.7V \text{ to } 5.5V, V_{SS} = AV_{SS} = 0V, T_A = -40^{\circ}C \text{ to } +125^{\circ}C)$ 

Parameter		Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Sector erase time	Large Sector	$T_A \leq +105^{\circ}C$	-	1.6	7.5	s	Includes write time prior to internal erase.
	Small Sector	-	-	0.4	2.1	s	
	Security Sector	-	-	0.31	1.65	s	
Word (16-bit) write time	Large Sector	$T_A \leq +105^{\circ}C$	-	25	400	$\mu s$	Not including system-level overhead time.
	Small Sector	-	-	25	400	$\mu s$	
Chip erase time		$T_A \leq +105^{\circ}C$	-	8.31	40.05	s	Includes write time prior to internal erase.

**Note:**

While the Flash memory is written or erased, shutdown of the external power ( $V_{CC}$ ) is prohibited. In the application system where the external power ( $V_{CC}$ ) might be shut down while writing or erasing, be sure to turn the power off by using a low voltage detection function.

To put it concrete, change the external power in the range of change ration of power supply voltage ( $-0.004V/\mu s$  to  $+0.004V/\mu s$ ) after the external power falls below the detection voltage ( $V_{DLX}$ )<sup>\*1</sup>.

Write/Erase cycles and data hold time

Write/Erase cycles (cycle)	Data hold time (year)
1,000	$20^{*2}$
10,000	$10^{*2}$
100,000	$5^{*2}$

\*1: See "14.7 Low Voltage Detection Function Characteristics".

\*2: This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at  $+85^{\circ}C$ ).

**15. Example Characteristics**

This characteristic is an actual value of the arbitrary sample. It is not the guaranteed value.

**■ Used setting**

Mode	Selected Source Clock	Clock/Regulator and FLASH Settings
Run mode	PLL	CLKS1 = CLKS2 = CLKB = CLKP1 = CLKP2 = 32MHz
	Main osc.	CLKS1 = CLKS2 = CLKB = CLKP1 = CLKP2 = 4MHz
	RC clock fast	CLKS1 = CLKS2 = CLKB = CLKP1 = CLKP2 = 2MHz
	RC clock slow	CLKS1 = CLKS2 = CLKB = CLKP1 = CLKP2 = 100kHz
	Sub osc.	CLKS1 = CLKS2 = CLKB = CLKP1 = CLKP2 = 32kHz
Sleep mode	PLL	CLKS1 = CLKS2 = CLKP1 = CLKP2 = 32MHz Regulator in High Power Mode, (CLKB is stopped in this mode)
	Main osc.	CLKS1 = CLKS2 = CLKP1 = CLKP2 = 4MHz Regulator in High Power Mode, (CLKB is stopped in this mode)
	RC clock fast	CLKS1 = CLKS2 = CLKP1 = CLKP2 = 2MHz Regulator in High Power Mode, (CLKB is stopped in this mode)
	RC clock slow	CLKS1 = CLKS2 = CLKP1 = CLKP2 = 100kHz Regulator in Low Power Mode, (CLKB is stopped in this mode)
	Sub osc.	CLKS1 = CLKS2 = CLKP1 = CLKP2 = 32kHz Regulator in Low Power Mode, (CLKB is stopped in this mode)
Timer mode	PLL	CLKMC = 4MHz, CLKPLL = 32MHz (System clocks are stopped in this mode) Regulator in High Power Mode, FLASH in Power-down / reset mode
	Main osc.	CLKMC = 4MHz (System clocks are stopped in this mode) Regulator in High Power Mode, FLASH in Power-down / reset mode
	RC clock fast	CLKMC = 2MHz (System clocks are stopped in this mode) Regulator in High Power Mode, FLASH in Power-down / reset mode
	RC clock slow	CLKMC = 100kHz (System clocks are stopped in this mode) Regulator in Low Power Mode, FLASH in Power-down / reset mode
	Sub osc.	CLKMC = 32 kHz (System clocks are stopped in this mode) Regulator in Low Power Mode, FLASH in Power-down / reset mode
Stop mode	stopped	(All clocks are stopped in this mode) Regulator in Low Power Mode, FLASH in Power-down / reset mode

## 16. Ordering Information

MCU with CAN controller

Part number	Flash memory	Package*
MB96F6B5RBPMC-GSE1	Flash A (160.5KB)	100-pin plastic LQFP (FPT-100P-M20)
MB96F6B5RBPMC-GSE2		
MB96F6B6RBPMC-GSE1	Flash A (288.5KB)	100-pin plastic LQFP (FPT-100P-M20)
MB96F6B6RBPMC-GSE2		

\*: For details about package, see "Package Dimension".

MCU without CAN controller

Part number	Flash memory	Package*
MB96F6B5ABPMC-GSE1	Flash A (160.5KB)	100-pin plastic LQFP (FPT-100P-M20)
MB96F6B5ABPMC-GSE2		

\*: For details about package, see "Package Dimension".

**17. Package Dimension**

<p>100-pin plastic LQFP</p>  <p>(FPT-100P-M20)</p>	Lead pitch	0.50 mm
	Package width x package length	14.0 mm x 14.0 mm
	Lead shape	Gullwing
	Sealing method	Plastic mold
	Mounting height	1.70 mm Max
	Weight	0.65 g
	Code (Reference)	P-LFQFP100-14x14-0.50

## 18. Major Changes

### Spanansion Publication Number: MB966B0-DS704-00013

Page	Section	Change Results
Revision 1.0		
-	-	PRELIMINARY → Data sheet
2	Features	Changed the description of “System clock” Up to 16 MHz external clock for devices with fast clock input feature → Up to 8 MHz external clock for devices with fast clock input feature
4		Changed the description of “LCD Controller” On-chip drivers for internal divider resistors or external divider resistors → Internal divider resistors or external divider resistors
		Added “Sound Generator”
		Changed the description of “External Interrupts” Interrupt mask and pending bit per channel → Interrupt mask bit per channel
5		Added the description of “I/O Ports” “Some pins offer high current output capability for LED driving.”
5	Changed the description of “Built-in On Chip Debugger” - Event sequencer: 2 levels → - Event sequencer: 2 levels + reset	
6	Product Lineup	Added the Product
		Changed the Remark of RLT RLT 0/1/2/3/6 Only RLT6 can be used as PPG clock source → RLT 0 to 3/6
		Added the Feature of Sound Generator
8	Block Diagram	Added the block of Sound Generator
		Deleted the block of RLT6 from PPG block
		Changed the RLT block 4ch → 0/1/2/3/6 5ch
9	Pin Assignment	Added the Pin Pin no.23, SGO1 Pin no.24, SGA1 Pin no.28, SGO1_R Pin no.29, SGA1_R Pin no.81, SGO0 Pin no.82, SGA0
10	Pin Description	Changed the Description of PPGn_B Programmable Pulse Generator n output (8bit) → Programmable Pulse Generator n output (16bit/8bit)
		Added the Pin SGAn SGAn_R SGOn SGOn_R

Page	Section	Change Results
12	Pin Circuit Type	Added the Pin name Pin no.23, SGO1 Pin no.24, SGA1 Pin no.28, SGO1_R Pin no.29, SGA1_R
		Changed the I/O circuit type Pin no.30 to 34, 37 to 40 K → V
		Changed the I/O circuit type Pin no.41 to 43, 47, 49 K → V Pin no.46, 48 I → W
13		Changed the I/O circuit type Pin no.41 to 43, 47, 49 K → V Pin no.46, 48 I → W
14		Added the Pin name Pin no.81, SGO0 Pin no.82, SGA0
16	I/O Circuit Type	Changed the figure of type B
		Changed the Remarks of type B (CMOS hysteresis input with input shutdown function, $I_{OL} = 4mA$ , $I_{OH} = -4mA$ , Programmable pull-up resistor) → (CMOS level output ( $I_{OL} = 4mA$ , $I_{OH} = -4mA$ ), Automotive input with input shutdown function and programmable pull-up resistor)
		Changed the figure of type G
		Added the Type V
		Added the Type W
17		Changed the figure of type G
20		Added the Type V
21		Added the Type W
22	Memory Map	Changed the START addresses of Boot-ROM 0F:E000 <sub>H</sub> → 0F:C000 <sub>H</sub>
24	User Rom Memory Map For Flash Devices	Changed the annotation Others (from DF:0200 <sub>H</sub> to DF:1FFF <sub>H</sub> ) are all ROM Mirror area for SAS-512B. → Others (from DF:0200 <sub>H</sub> to DF:1FFF <sub>H</sub> ) is mirror area of SAS-512B.
26	Interrupt Vector Table	Changed the Description of CALLV0 to CALLV7 Reserved → CALLV instruction
		Changed the Description of RESET Reserved → Reset vector
		Changed the Description of INT9 Reserved → INT9 instruction
		Changed the Description of EXCEPTION Reserved → Undefined instruction execution
27	Interrupt Vector Table	Changed the Vector name of Vector number 64 PPGRLT → RLT6

Page	Section	Change Results
		Changed the Description of Vector number 64 Reload Timer 6 can be used as PPG clock source → Reload Timer 6
28		Added Vector name to Vector number 95 SG0
29		Added Vector name to Vector number 121 SG1
30 to 33	Handling Precautions	Added a section
	Handling Devices	Added the description to “3. External clock usage” (3) <b>Opposite phase external clock</b>
35		Changed the description in “7. Turn on sequence of power supply to A/D converter and analog inputs”  In this case, the voltage must not exceed AVR <sub>H</sub> or AV <sub>CC</sub> (turning the analog and digital power supplies simultaneously on or off is acceptable). → In this case, AVR <sub>H</sub> must not exceed AV <sub>CC</sub> . Input voltage for ports shared with analog input ports also must not exceed AV <sub>CC</sub> (turning the analog and digital power supplies simultaneously on or off is acceptable).
36		Added the description “12. Mode Pin (MD)”
	Electrical Characteristics	Added Symbols of High current port
37	1. Absolute Maximum Ratings	Changed the annotation *3 Input/Output voltages of standard ports depend on V <sub>CC</sub> . → Input/Output voltages of general I/O ports depend on V <sub>CC</sub> .
		Changed the annotation *4 Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset (except devices with persistent low voltage reset in internal vector mode). → Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset.
38		Added the annotation *4 The DEBUG I/F pin has only a protective diode against V <sub>SS</sub> . Hence it is only permitted to input a negative clamping current (4mA). For protection against positive input voltages, use an external clamping diode which limits the input voltage to maximum 6.0V.
	2. Recommended Operating Conditions	Added the Value and Remarks to “Power supply voltage” Min: 2.0V Typ: - Max: 5.5V Remarks: Maintains RAM data in stop mode
39		Changed the Value of “Smoothing capacitor at C pin” Typ: 1.0μF → 1.0μF to 3.9μF Max: 1.5μF → 4.7μF
		Changed the Remarks of “Smoothing capacitor at C pin” Deleted “(Target value)” Added “3.9μF (Allowance within ± 20%)”
	3. DC Characteristics	Deleted “(Target value)” from Remarks
40	(1) Current Rating	Added the Symbol to “Power supply current in Run modes” I <sub>CCRCH</sub> , I <sub>CCRCL</sub>

Page	Section	Change Results
		<p>Changed the Conditions of <math>I_{CCPLL}</math>, <math>I_{CCMAIN}</math>, <math>I_{CCSUB}</math> in "Power supply current in Run modes" "Flash 0 wait" is added</p> <p>Changed the Value of "Power supply current in Run modes"  <math>I_{CCPLL}</math>            TYP:28.5mA → 28mA (<math>T_A = +25^\circ\text{C}</math>)  <math>I_{CCMAIN}</math>            TYP:5mA → 3.5mA (<math>T_A = +25^\circ\text{C}</math>)            Max: 10mA → 8mA (<math>T_A = +105^\circ\text{C}</math>)            Max: 11.5mA → 9.5mA (<math>T_A = +125^\circ\text{C}</math>)  <math>I_{CCSUB}</math>            TYP:0.5mA → 0.1mA (<math>T_A = +25^\circ\text{C}</math>)            Max: 6mA → 3.3mA (<math>T_A = +105^\circ\text{C}</math>)            Max: 7.5mA → 4.8mA (<math>T_A = +125^\circ\text{C}</math>)</p>
41		<p>Added the Symbol to "Power supply current in Sleep modes" <math>I_{CCSRCH}</math>, <math>I_{CCSRCL}</math></p> <p>Changed the Conditions of <math>I_{CCSMAIN}</math> in "Power supply current in Sleep modes" "SMCR:LPMSS=0" is added</p> <p>Changed the Value of "Power supply current in Sleep modes"  <math>I_{CCSPLL}</math>            Typ: 10mA → 9.5mA (<math>T_A = +25^\circ\text{C}</math>)  <math>I_{CCSMAIN}</math>            Typ: 3mA → 1.1mA (<math>T_A = +25^\circ\text{C}</math>)            Max: 8mA → 4.7mA (<math>T_A = +105^\circ\text{C}</math>)            Max: 9.5mA → 6.2mA (<math>T_A = +125^\circ\text{C}</math>)  <math>I_{CCSSUB}</math>            Typ: 0.3mA → 0.04mA (<math>T_A = +25^\circ\text{C}</math>)            Max: 4.5mA → 2.7mA (<math>T_A = +105^\circ\text{C}</math>)            Max: 6mA → 4.2mA (<math>T_A = +125^\circ\text{C}</math>)</p>
42		<p>Added the Symbol to "Power supply current in Timer modes" <math>I_{CCTPLL}</math></p> <p>Changed the Conditions of <math>I_{CCTMAIN}</math>, <math>I_{CCTRCH}</math> in "Power supply current in Timer modes" "SMCR:LPMSS=0" is added</p>
42	3. DC Characteristics (1) Current Rating	<p>Changed the Value of "Power supply current in Timer modes"  <math>I_{CCTMAIN}</math>            Max: 335<math>\mu\text{A}</math> → 330<math>\mu\text{A}</math> (<math>T_A = +25^\circ\text{C}</math>)            Max: 1320<math>\mu\text{A}</math> → 1200<math>\mu\text{A}</math> (<math>T_A = +105^\circ\text{C}</math>)            Max: 2300<math>\mu\text{A}</math> → 2155<math>\mu\text{A}</math> (<math>T_A = +125^\circ\text{C}</math>)  <math>I_{CCTRCH}</math>            Max: 245<math>\mu\text{A}</math> → 215<math>\mu\text{A}</math> (<math>T_A = +25^\circ\text{C}</math>)            Max: 1230<math>\mu\text{A}</math> → 1110<math>\mu\text{A}</math> (<math>T_A = +105^\circ\text{C}</math>)            Max: 2205<math>\mu\text{A}</math> → 2065<math>\mu\text{A}</math> (<math>T_A = +125^\circ\text{C}</math>)  <math>I_{CCTRCL}</math>            Max: 105<math>\mu\text{A}</math> → 75<math>\mu\text{A}</math> (<math>T_A = +25^\circ\text{C}</math>)            Max: 1030<math>\mu\text{A}</math> → 910<math>\mu\text{A}</math> (<math>T_A = +105^\circ\text{C}</math>)            Max: 2005<math>\mu\text{A}</math> → 1870<math>\mu\text{A}</math> (<math>T_A = +125^\circ\text{C}</math>)  <math>I_{CCTSUB}</math>            Max: 90<math>\mu\text{A}</math> → 65<math>\mu\text{A}</math> (<math>T_A = +25^\circ\text{C}</math>)            Max: 1000<math>\mu\text{A}</math> → 885<math>\mu\text{A}</math> (<math>T_A = +105^\circ\text{C}</math>)            Max: 1980<math>\mu\text{A}</math> → 1845<math>\mu\text{A}</math> (<math>T_A = +125^\circ\text{C}</math>)</p>
43		<p>Changed the Value of "Power supply current in Stop mode"  <math>I_{CCH}</math>            Max: 90<math>\mu\text{A}</math> → 60<math>\mu\text{A}</math> (<math>T_A = +25^\circ\text{C}</math>)            Max: 1000<math>\mu\text{A}</math> → 880<math>\mu\text{A}</math> (<math>T_A = +105^\circ\text{C}</math>)            Max: 1980<math>\mu\text{A}</math> → 1840<math>\mu\text{A}</math> (<math>T_A = +125^\circ\text{C}</math>)</p> <p>Added the Symbol <math>I_{CCFLASHPD}</math></p>

Page	Section	Change Results
		<p>Changed the Value and condition of "Power supply current for active Low Voltage detector"</p> <p><math>I_{CCCLVD}</math>            Typ: 5<math>\mu</math>A, Max: 15<math>\mu</math>A, Remarks: nothing            →            Typ: 5<math>\mu</math>A, Max: -, Remarks: <math>T_A = +25^\circ\text{C}</math>            Typ: -, Max: 12.5<math>\mu</math>A, Remarks: <math>T_A = +125^\circ\text{C}</math></p> <p>Changed the condition of "Flash Write/Erase current"</p> <p><math>I_{CCFLASH}</math>            Typ: 12.5mA, Max: 20mA, Remarks: nothing            →            Typ: 12.5mA, Max: -, Remarks: <math>T_A = +25^\circ\text{C}</math>            Typ: -, Max: 20mA, Remarks: <math>T_A = +125^\circ\text{C}</math></p> <p>Changed the annotation *2            The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator.            →            When Flash is not in Power-down / reset mode, <math>I_{CCFLASHPD}</math> must be added to the Power supply current.            The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. The current for "On Chip Debugger" part is not included.</p>
44	3. DC Characteristics (2) Pin Characteristics	<p>Added the Symbol for High Drive type  <math>V_{OH20}</math>, <math>V_{OL20}</math></p> <p>Added the Symbol for DEBUG I/F pin  <math>V_{OLD}</math></p>
45	3. DC Characteristics (2) Pin Characteristics	<p>Changed the Pin name of "Input capacitance"            Other than  <math>V_{CC}</math>,  <math>V_{SS}</math>,  <math>AV_{CC}</math>,  <math>AV_{SS}</math>,  <math>AV_{RH}</math>,  <math>AV_{RL}</math>,  <math>P08\_m</math>,  <math>P09\_m</math>,  <math>P10\_m</math>            →            Other than  <math>C</math>,  <math>V_{CC}</math>,  <math>V_{SS}</math>,  <math>AV_{CC}</math>,  <math>AV_{SS}</math>,  <math>AV_{RH}</math>,  <math>AV_{RL}</math>,  <math>P08\_m</math>,  <math>P09\_m</math>,  <math>P10\_m</math></p> <p>Deleted the annotation            "<math>I_{OH}</math> and <math>I_{OL}</math> are target value."</p> <p>Added the annotation            "In the case of high current outputs, set "1" to the bit in the Port High Drive Register."</p>

Page	Section	Change Results
46	4. AC Characteristics (1) Main Clock Input Characteristics	<p>Changed MAX frequency for <math>f_{FCI}</math> in all conditions 16 → 8</p> <p>Changed MIN frequency for <math>t_{CYLH}</math> 62.5 → 125</p> <p>Changed MIN, MAX and Unit for <math>P_{WH}</math>, <math>P_{WL}</math> MIN: 30 → 55 MAX: 70 → - Unit: % → ns</p> <p>Added the figure (<math>t_{CYLH}</math>) when using the external clock</p>
47	4. AC Characteristics (2) Sub Clock Input Characteristics	Added the figure ( $t_{CYLL}$ ) when using the crystal oscillator clock
48	4. AC Characteristics (3) Built-in RC Oscillation Characteristics	Added "RC clock stabilization time"
49	4. AC Characteristics (5) Operating Conditions of PLL	Changed the Value of "PLL input clock frequency" Max: 16MHz → 8MHz
		Changed the Symbol of "PLL oscillation clock frequency" $f_{PLLO} \rightarrow f_{CLKVCO}$
		Added Remarks to "PLL oscillation clock frequency"
		Added "PLL phase jitter" and the figure
	4. AC Characteristics (6) Reset Input	Added the figure for reset input time ( $t_{RSTL}$ )
51	4. AC Characteristics (8) USART Timing	<p>Changed the condition (<math>V_{CC} = AV_{CC} = 2.7V</math> to <math>5.5V</math>, <math>V_{SS} = AV_{SS} = 0V</math>, <math>T_A = -40^{\circ}C</math> to <math>+125^{\circ}C</math>) → (<math>V_{CC} = AV_{CC} = 2.7V</math> to <math>5.5V</math>, <math>V_{SS} = AV_{SS} = 0V</math>, <math>T_A = -40^{\circ}C</math> to <math>+125^{\circ}C</math>, <math>C_L=50pF</math>)</p> <p>Changed the HARDWARE MANUAL "MB966B0 series HARDWARE MANUAL" → "MB96600 series HARDWARE MANUAL"</p>
52		Changed the figure for "Internal shift clock mode"
54	4. AC Characteristics (10) I <sup>2</sup> C timing	<p>Added parameter, "Noise filter" and an annotation *5 for it</p> <p>Added <math>t_{SP}</math> to the figure</p>
55	5. A/D Converter (1) Electrical Characteristics for the A/D Converter	Added "Analog impedance"
		Added "Variation between channels"
		Added the annotation
56	5. A/D Converter (2) Accuracy and Setting of the A/D Converter Sampling Time	Deleted the unit "[Min]" from approximation formula of Sampling time
57	5. A/D Converter (3) Definition of A/D Converter Terms	<p>Changed the Description and the figure "Linearity" → "Nonlinearity" "Differential linearity error" → "Differential nonlinearity error"</p>
		<p>Changed the Description Linearity error: Deviation of the line between the zero-transition point (0b0000000000 ←→ 0b0000000001) and the full-scale transition point (0b1111111110 ←→ 0b1111111111) from the actual conversion characteristics. → Nonlinearity error: Deviation of the actual conversion characteristics from a straight line that connects the zero transition point (0b0000000000 ←→ 0b0000000001) to the full-scale transition point (0b1111111110 ←→ 0b1111111111).</p>

Page	Section	Change Results
		Added the Description "Zero transition voltage" "Full scale transition voltage"
59	6. High Current Output Slew Rate	Added the item of "6. High Current Output Slew Rate"
60	7. Low Voltage Detection Function Characteristics	Added the Value of " Power supply voltage change rate" Max: +0.004 V/ $\mu$ s
		Added "Hysteresis width" ( $V_{HYS}$ )
		Added "Stabilization time" ( $T_{LVDSTAB}$ )
		Added "Detection delay time" ( $t_d$ )
		Deleted the Remarks
		Added the annotation *1, *2
61		Added the figure for "Hysteresis width"
		Added the figure for "Stabilization time"
62	8. Flash Memory Write/Erase Characteristics	Changed the Value of "Sector erase time"
		Added "Security Sector" to "Sector erase time"
		Changed the Parameter "Half word (16 bit) write time" → "Word (16-bit) write time"
		Changed the Value of "Chip erase time"
		Changed the Remarks of "Sector erase time" Excludes write time prior to internal erase → Includes write time prior to internal erase
		Added the Note and annotation *1
		Deleted "(targeted value)" from title " Write/Erase cycles and data hold time"
63 to 65	Example Characteristics	Added a section
66	Ordering Information	Changed part number MCU with CAN controller MB96F6B6RAPMC-GSE1* → MB96F6B6RBPMC-GSE1 MB96F6B6RAPMC-GSE2* → MB96F6B6RBPMC-GSE2
		Added part number MCU with CAN controller MB96F6B5RBPMC-GSE1 MB96F6B5RBPMC-GSE2 MCU without CAN controller MB96F6B5ABPMC-GSE1 MB96F6B5ABPMC-GSE2
Revision 1.1		
-	-	Company name and layout design change

**NOTE: Please see "Document History" about later revised information.**

## Document History

Document Title: MB966B0 Series F<sup>2</sup>MC-16FX 16-Bit Microcontroller

Document Number: 002-04721

Revision	ECN	Orig. of Change	Submission Date	Description of Change
**	-	KSUN	01/31/2014	Migrated to Cypress and assigned document number 002-04721 No change to document contents or format.
*A	5126730	KSUN	03/03/2016	Updated to Cypress format.

## Sales, Solutions, and Legal Information

### Worldwide Sales and Design Support

Cypress maintains a worldwide network of offices, solution centers, manufacturer's representatives, and distributors. To find the office closest to you, visit us at [Cypress Locations](#).

© Cypress Semiconductor Corporation 2014-2016. This document is the property of Cypress Semiconductor Corporation and its subsidiaries, including Spansion LLC ("Cypress"). This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you under its copyright rights in the Software, a personal, non-exclusive, nontransferable license (without the right to sublicense) (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units. Cypress also grants you a personal, non-exclusive, nontransferable, license (without the right to sublicense) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely to the minimum extent that is necessary for you to exercise your rights under the copyright license granted in the previous sentence. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and Company shall and hereby does release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. Company shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.

Cypress, the Cypress logo, Spansion, the Spansion logo, and combinations thereof, PSoC, CapSense, EZ-USB, F-RAM, and Traveo are trademarks or registered trademarks of Cypress in the United States and other countries.
