

PL60203X

HCSL-Compatible Clock Generator for PCI Express

General Description

The PL60203X is the smallest, high performance, lowest power, 2 differential output clock IC available for HCSL timing applications. PL60203X offers -130dBc at 10kHz offset at 100MHz, with a very low jitter (2ps TIE RMS), making it ideal for HCSL applications requiring small size and low power.

Datasheets and support documentation are available on Micrel's web site at: www.micrel.com.

Features

- Input frequency:
 - Fundamental crystal or reference input: 25MHz.
- Output frequency:
 - PL602031: 2 x 25MHz differential outputs.
 - PL602032: 2 x 100MHz differential outputs.
 - PL602033: 2 x 125MHz differential outputs.
 - PL602034: 2 x 200MHz differential outputs.
- Very low jitter: 28ps peak-to-peak typical.
- Very low phase noise:
 - -130dBc at 10kHz offset at 100MHz.
- Compliant with PCI-Express Gen1, Gen2, and Gen3.
- Power supply range: 2.25V to 3.63V.
- Operating temperature range: -40°C to +85°C.
- Available in 16-pin QFN, RoHS and PFOS compliant package.

Applications

- Servers
- Storage systems
- Switches and routers
- Gigabit Ethernet
- Set-top boxes/DVRs

Pin Description

| Pin Number | Pin Name | Pin Type | Pin Function |
|----------------|-----------|----------|--|
| 1 | XIN, FIN | I | Crystal input pin or reference clock input. |
| 2 | GND0 | I | GND connection for CLK0. |
| 3, 4 | CLK0[0:1] | O | Differential clock output pair |
| 5 | VDD0 | P | VDD connection for CLK0 |
| 6, 7 | CLK1[0:1] | O | Differential clock output pair |
| 10 | VDD1 | P | VDD connection for CLK1 |
| 11 | OE1 | I | Output enable pin for CLK1. High=Enabled, Low=Disabled. OE1 has a 60K Ω pull-up resistor. |
| 12 | GND1 | P | GND connection for CLK1 |
| 15 | XOUT | O | Crystal output pin |
| 16 | OE0 | I | Output enable pin for CLK0. High=Enabled, Low=Disabled. OE0 has a 60K Ω pull-up resistor. |
| 8, 9 13, 14 | DNC | | Do not connect. |
| | ePad | | Center pad for thermal relief. Connect to GND. |

Absolute Maximum Ratings⁽²⁾

Notes:

- Exceeding the absolute maximum ratings may damage the device.
- Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5k in series with 100pF.
- The device is not guaranteed to function outside its operating ratings.
- Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB. θ_{JA} and ψ_{JB} values are determined for a 4-layer board in still-air number, unless otherwise stated.
- Specification for packaged product only

PCI Express/HCSL Compatible Layout Guidelines

Figure 1 below demonstrates how to terminate the complementary LVCMOS outputs of PL60203X for use with HCSL inputs.

PCB Layout Considerations for Performance Optimization

The following guidelines are designed to assist you with a performance-optimized PCB design:

- Keep all the PCB traces to PL60203X as short as possible. Also keep all other traces as far away from PL60203X as possible.
- Place the crystal as close as possible to both crystal pins of the device. This will reduce the cross-talk between the crystal and the other signals.
- Separate crystal pin traces from the other signals on the PCB, but allow ample distance between the two crystal pin traces.
- Place a $0.01\mu\text{F}$ decoupling capacitor between VDD and GND on the component side of the PCB, close to the VDD pin. It is not recommended to place this component on the backside of the PCB.
- It is highly recommended to keep the VDD and GND traces as short as possible.
- When connecting long traces (>1 inch) to a CMOS output, it is important to design the traces as a transmission line, or “stripline”, to avoid reflections or ringing. In this case, the CMOS output needs to be matched to the trace impedance. Usually, “striplines” are designed for 50Ω impedance and CMOS outputs usually have an impedance of less than 50Ω , so matching can be achieved by adding a resistor in series with the CMOS output pin to the “stripline” trace.

Power Supply Filtering Recommendations

Preferred filter, using Micrel MIC94300 or MIC94310 Ripple Blocker™:

Alternative, traditional filter, using a ferrite bead:
