

SONET OC-12/OC-3 CLOCK SYNTHESIZER

FEATURES

- Single chip source for 622.08MHz and 155.52MHz clocks
- 622.08MHz output is differential PECL, 155.52MHz output is single-ended PECL
- TTL/CMOS compatible inputs and reference output
- SONET compliant jitter performance (≤0.01UI)
- Choice of three reference frequencies
- Only 395mW (typ)
- Complies with Bellcore, CCITT and ANSI standards
- Single +5 volt power supply
- Fully compatible with industry standard 10KH I/O levels
- Available in 28-pin PLCC package

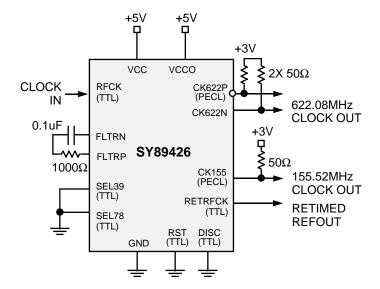

Precision Edge®

DESCRIPTION

Micrel's SY89426 Multi-Output Phase Locked Loop (PLL) is a SONET compliant clock generator providing 622.08MHz, 155.52MHz and retimed reference clock outputs. The PLL produces low jitter OC-12/STS-12 and OC-3/STS-3 rate clocks from an input reference clock of 38.88, 51.84, or 77.76MHz. Additionally, the input reference clock is retimed and provided as a TTL/CMOS compatible output, which may be disabled to minimize switching noise. The SY89426 operates from a single +5 volt supply, and requires only a simple series RC loop filter.

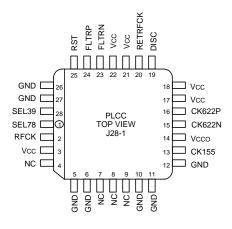

Coupling Micrel's advanced PLL technology with our proprietary ASSET[™] bipolar process has produced a clock generator IC which exceeds applicable Bellcore and ANSI specifications, while setting a new standard for performance and flexibility.

TYPICAL APPLICATION

Precision Edge is a registered trademark of Micrel, Inc. ASSET is a trademark of Micrel, Inc.

PACKAGE/ORDERING INFORMATION

28-Pin PLCC (J28-1)

Ordering Information⁽¹⁾

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY89426JC	J28-1	Commercial	SY89426JC	Sn-Pb
SY89426JCTR ⁽²⁾	J28-1	Commercial	SY89426JC	Sn-Pb
SY89426JY ⁽³⁾	J28-1	Industrial	SY89426JY with Pb-Free bar line indicator	Matte-Sn Pb-Free
SY89426JYTR ^(2, 3)	J28-1	Industrial	SY89426JY with Pb-Free bar line indicator	Matte-Sn Pb-Free

Notes:

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^{\circ}C$, DC Electricals only.

2. Tape and Reel.

3. Pb-Free package is recommended for new designs.

PIN DESCRIPTION

<u>INPUTS</u>

RFCK [Reference Clock] TTL

Reference clock IN. (38.88, 51.84 or 77.76MHz).

SEL39 [38.88MHz Select] TTL

Logic HIGH on this pin denotes a 38.88MHz input reference clock. Tie to logic LOW if input is not 38.88MHz.

SEL78 [77.76MHz Select] TTL

Logic HIGH on this pin denotes a 77.76MHz input reference clock. Tie to logic LOW if input is not 77.76MHz.

RST [Reset] TTL

Tie to logic LOW for normal operation; logic HIGH forces reset of internal Phase Detector & feedback dividers.

FLTRP, FLTRN [Loop Filter, Pos & Neg] Analog

Connect a series RC loop filter between these pins. The suggested RC values are 500Ω and 0.1μ F, as shown in the Typical Application.

DISC [Disable Clock] TTL

Logic HIGH on this pin disables the Retimed Reference Clock output RETRFCK); if this output is not required, it is recommended that it be disabled to reduce switching noise. A logic LOW enables the output.

<u>OUTPUTS</u>

CK622P, CK622N [622 Clock Output] Differential PECL. 622.08MHz output clock from PLL B.

CK155 [155 Clock Out] Single-ended PECL 155.52MHz output clock.

RETRFCK [Retimed Reference Clock Out] TTL

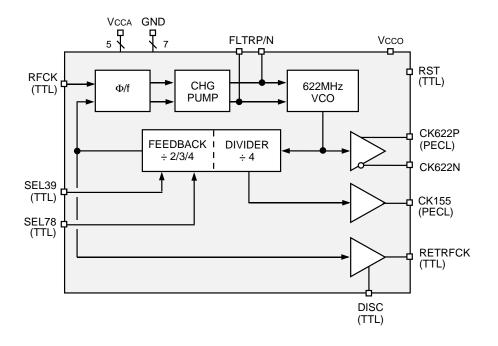

An output clock with the same frequency as the input Reference Clock (RFCK) and a 45-55% duty cycle. This output is derived by dividing the 622.08MHz output by the appropriate factor (e.g., divide by 16 for a 38.88MHz inout reference; divide by 12 for 51.84Mhz in; or divide by 8 for 77.76MHz in).

POWER & GROUND

Vcc +5V for internal circuits.Vcco +5V for PECL outputs.

GND Ground (0 volts).

FUNCTIONAL BLOCK DIAGRAM

REFERENCE FREQUENCY SELECTION⁽¹⁾

SEL39	SEL78	fRFCK
0	0	51.84
0	1	77.76
1	0	38.88
1	1	77.76

NOTE:

1. Airflow greater than 500lfpm is maintained.

ABSOLUTE MAXIMUM RATINGS^{(1), (2)}

Symbol	Para	ameter	Rating	Unit
V _{cc}	Power Supply		0 to +7	V
V _{IN}	Input Voltage		0 to Vcc	V
I _{OUT}	Output Current	-Continuous	50	mA
		–Surge	100	mA
T _A	Operating Temperature	Range	-40 to +85	°C
T _{LEAD}	Lead Temperature (solo	lering, 20 sec.)	+260	°C
T _{store}	Storage Temperature R	ange	-65 to +150	°C

NOTES:

- 1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
- 2. Airflow greater than 500lfpm is maintained.

PECL DC ELECTRICAL CHARACTERISTIC^{(1), (2)}

$Vcc = Vcco = +5V \pm 5\%; G$	$ND = 0V; TA = -40^{\circ}C \text{ to } 85^{\circ}C$
-------------------------------	--

		TA = -40°C		TA = 0°C		TA = +25°C		TA = +85°C		
Symbol	Parameter	Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	Unit
Vон	Output HIGH Voltage	Vcc -1130	Vcc -840	Vcc -1070	Vcc -790	Vcc -1030	Vcc -760	Vcc -960	Vcc -670	mV

NOTE:

1. Airflow greater than 500lfpm is maintained.

TIMING WAVEFORM

Jitter Generation Definition

Bellcore TR-NWT-000499 (Issue 4), section 7.3.3 "Jitter generation is the process whereby jitter appears at the output port of an individual unit of digital equipment in the absence of applied input jitter."

Jitter Generation Requirement

Bellcore TA-NWT-000253 (Issue 2), section 5.6.5.2 "For Category II interfaces, jitter generation shall not exceed 0.01 UI rms. For OC-N and STSX-N interfaces, a high-pass measurement filter with a 12kHz cutoff frequency shall be used." The low-pass cutoff frequency of the measurement filter shall be higher than 5MHz.

The characteristic of the measurement filter is shown below.

SONET OC-12 Category II Jitter Generation Measurement Filter Characteristics
