

## LOW-VOLTAGE OPERATION TINY SINGLE C-MOS OPERATIONAL AMPLIFIER

### ■ GENERAL DESCRIPTION

The NJU7017 is a low voltage single-power-supply and low operating current single C-MOS operational amplifier.

The input bias current is as low as less than 1pA, consequently the very small signal around the ground level can be amplified.

The minimum operating voltage is 1V and the output stage permits output signals to swing between both of the supply rails.

Furthermore, the NJU7017 is packaged with very small SOT-23-5, therefore it can be especially applied to portable items.
