
High Efficiency Small Packaged Step-up DC/DC Converter Evaluation Board

NO.EEV-317-K501A-230403

RP402K501A-EV is the evaluation board for RP402 which has the below features, benefits and specifications.

OUTLINE

The RP402K is a high efficiency step-up DC/DC converter with synchronous rectifier. The device can start up with low voltage of typically 0.7 V which is ideal for the applications powered by either one-cell or twocell alkaline, nickel-metal-hydride (NiMH) or one-cell Lithium-ion (Li+) batteries.

Internally, the RP402K consists of an oscillator, a reference voltage unit with soft start, a chip enable circuit, an error amplifier, phase compensation circuits, a slope circuit, a PWM control circuit, a start-up circuit, a PWM/VFM mode control circuit, internal switches and protection circuits.

The RP402K is employing synchronous rectification for improving the efficiency or rectification by replacing diodes with built-in switching transistors. Using synchronous rectification not only increases circuit performance

but also allows a design to reduce parts count.

The RP402K is available in either internally fixed output voltage type or adjustable output voltage type. The RP402Kxxxx is the internally fixed output voltage type.

The RP402K provides the forced PWM control and the PWM/VFM auto switching control. Either one of these can be selected by inputting a signal to the MODE pin. The forced PWM control switches at fixed frequency rate in low output current in order to reduce noise. Likewise, the PWM/VFM auto switching control automatically switches from PWM mode to VFM mode in low output current in order to achieve high efficiency.

The RP402K has a soft-start time of typically 0.5 ms.

The RP402K features the complete output disconnect shutdown option and the input-to-output bypass shutdown option. The RP402KxxxA/ B/ E/ F incorporates the complete output disconnect shutdown option, which allows the output to be disconnected from the input. The RP402KxxxC/ D/ G/ H incorporates the input-to-output bypass shutdown option, which allows the output to be connected to the input.

The RP402K is protected against damage by a short-current protection, an over-voltage lockout, an over voltage protection, an anti-ringing switch and a latch-type protection. An anti-ringing switch prevents the occurrence of noise when an inductor current reaches a discontinuous mode. The RP402K provides optional Latch function with current limit detection which can turn off the power in case the limit values are detected for a fixed time and current limit circuit controls peak inductor currents in every clock. The latch-type protection can be released by switching the CE pin from high to low while the power is turned on.

FEATURES

- Low Voltage Start-up Typ. 0.7 V
- Input Voltage Range Fixed Output Voltage Type: 0.6 V to 4.8 V
Adjustable Output Voltage Type: 0.6 V to 4.6 V
- High Efficiency 94% (100 mA/ 5.0 V, $V_{IN} = 3.6$ V, 25°C)
90% (1 mA/ 5.0 V, $V_{IN} = 3.6$ V, 25°C)
- Output Current 800 mA: $V_{IN} = 3.6$ V, $V_{OUT} = 5.0$ V
- L_X Driver ON Resistance NMOS/ PMOS: 0.20 Ω ($V_{OUT} = 5.0$ V, 25°C)
- PWM Oscillator Frequency 1.2 MHz (Normal PWM), 1.0 MHz (Forced PWM)
- Output Voltage Range Fixed Output Voltage Type: 1.8 V to 5.5 V, 0.1 V step
- OVLO Detector Threshold Typ. 5.1 V
- OVP Detector Threshold Typ. 6.0 V
- L_X Peak Current Limit Typ. 1.5 A
- Latch Protection Delay Time Typ. 3.3 ms (RP402Kxx1x, RP402Nxx1x)
Typ. 4.1 ms (RP402Kxx2x)
- Soft-start Time Typ. 0.5 ms
- EMI Suppression (Built-in Anti-ringing Switch) (RP402Kxx1x)
- Voltage Regulation at $V_{IN} > V_{OUT}$
- Zero Input Complete Shutdown at $V_{IN} = 0$ V
- Input-to-Output Bypass Shutdown Option at CE = L (RP402xxxxC/ D/ G/ H)
- Ceramic Capacitor Capable
- Package DFN(PL)2020-8
- For more details on RP402 IC, please refer to
<https://www.nisshinbo-microdevices.co.jp/en/products/dc-dc-switching-regulator/spec/?product=rp402>

Part Number Information

Product Name	Package
RP402Kxx#\$	DFN(PL)2020-8

xx: Specify the set output voltage (VSET).

xx: Fixed Output Voltage Type , 50: VSET = 5.0 V

#: Specify the PWM control type.

1: Normal PWM operation

\$: Specify the combination of the shutdown option and the operation option at the current limit protection.

Version	Shutdown Options at CE = L	Operation at Current limit protection
A	Complete Output Disconnect	latch

PCB LAYOUT

RP402Kxxxx (PKG: DFN(PL)2020-8pin) Typical Board Layout (for Fixed Output Voltage Type)

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings

Symbol	Parameter		Rating	Unit
V _{IN}	V _{IN} Pin Voltage		−0.3 to 6.5	V
V _{OUT}	V _{OUT} Pin Voltage		−0.3 to 7.0	V
V _{LX}	L _X Pin Voltage		−0.3 to 6.5	V
V _{CE}	CE Pin Voltage		−0.3 to 6.5	V
V _{FB}	V _{FB} Pin Voltage (RP402K00xx only)		−0.3 to 6.5	V
V _{MODE}	MODE Pin Voltage (RP402Kxxxx only)		−0.3 to 6.5	V
P _D	Power Dissipation ⁽¹⁾ (JEDEC STD. 51-7)	DFN(PL)2020-8	1800	mW
T _j	Junction Temperature Range		−40 to 125	°C
T _{stg}	Storage Temperature Range		−55 to 125	°C

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

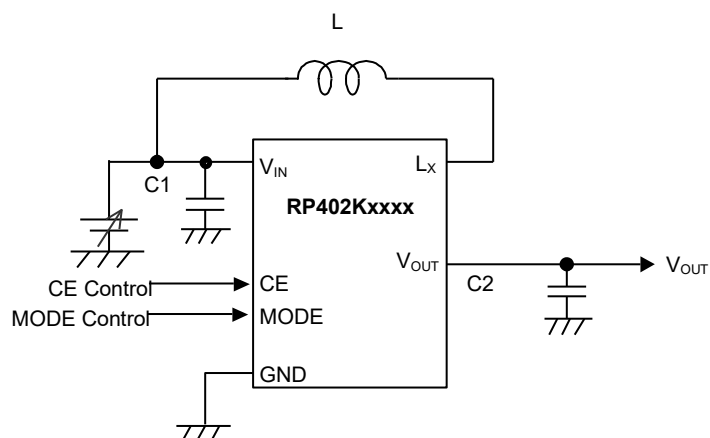

Symbol	Parameter	Rating	Unit
V _{IN}	Input Voltage	0.6 to 4.8	V
T _a	Operating Temperature	−40 to 85	°C

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

⁽¹⁾ Refer to *POWER DISSIPATION* for detailed information.

APPLICATION INFORMATION

Recommended External Components^{*1}

Symbol	Descriptions
L	2.2 μ H
C1	10 μ F
C2	10 μ F x 2

^{*1} The bill of materials will be attached on the shipment of each purchased evaluation board.

PIN DESCRIPTION

RP402K [DFN(PL)2020-8] Pin Configurations

* The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left floating.

RP402Kxxxx Pin Description

Pin No.	Symbol	Description
1	MODE	Mode Pin ⁽²⁾
2	NC	No Connection
3	GND	Ground Pin
4	Lx	Internal NMOS Switch Drain Pin
5	V _{OUT}	Output Pin
6	V _{IN}	Power Supply Pin
7	NC	No Connection
8	CE	Chip Enable Pin, Active-high

⁽²⁾ MODE Pin = "H" is recommended for RP402Kxx2x.

TECHNICAL NOTES

The performance of a power source circuit using this device is highly dependent on a peripheral circuit. A peripheral component or the device mounted on PCB should not exceed its rated voltage, rated current or rated power. When designing a peripheral circuit, please be fully aware of the following points. (Refer to *PCB Layout Considerations* below.)

- Ensure the V_{IN} and GND lines are firmly connected. A large switching current flows through the GND lines and the V_{IN} line. If their impedance is too high, noise pickup or unstable operation may result. When the built-in switch is turned off, the inductor may generate a spike-shaped high voltage. Use the high-breakdown voltage capacitor (C_{OUT}) which output voltage is 1.5 times or more than the set output voltage.
- Use a 2.2 μ H inductor (L) which is having a low equivalent series resistance, having enough tolerable current and which is less likely to cause magnetic saturation.
- The MODE pin is controlled with a logic voltage. To make it "H", 1.0 V or more must be forced to the MODE pin. If power supply is less than 1.0 V, MODE pin must be pulled up to V_{OUT} .
- When using Forced PWM Control Type, the MODE pin should be "H".
- The RP402x can reset the latch protection circuit by setting the CE signal 'L' ($V_{CE} < 0.3$ V) once while the power is switched on ($V_{IN} > 0.8$ V). If setting the CE pin when V_{IN} does not reach 0.8 V due to too large C_{IN} , the latch protection circuit cannot be reset correctly. Likewise, if starting the device up when the CE pin is shorted to the V_{IN} pin or V_{OUT} pin, the latch protection circuit cannot be reset.
- If controlling the CE pin by input voltage, the gradient of the power supply at rising must be considered. So, the CE pin must be connected via the delay circuit or the voltage detector to become the CE pin voltage less than 0.3 V until the V_{IN} becomes more than 0.8V.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
 - Aerospace Equipment
 - Equipment Used in the Deep Sea
 - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
 - Life Maintenance Medical Equipment
 - Fire Alarms / Intruder Detectors
 - Vehicle Control Equipment (automotive, airplane, railroad, ship, etc.)
 - Various Safety Devices
 - Traffic control system
 - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
8. **Quality Warranty**
 - 8-1. **Quality Warranty Period**
In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.
 - 8-2. **Quality Warranty Remedies**
When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.
Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.
 - 8-3. **Remedies after Quality Warranty Period**
With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.
9. Anti-radiation design is not implemented in the products described in this document.
10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
