## Measurement & Standard Reference

Abstract from GB/T 9396-1996 and IEC 268-5:1989: methods of measurement for main characteristics of loudspeakers.

### 5.1 Rated sine voltage.

A sinusoidal signal voltage specified by the manufacturer which makes the speaker work continuously in the rated frequency range, without causing electrical or mechanical damage to the speaker. The continuous voltage time is 1 hour.

### 5.2 Rated sine power.

The rated sine power corresponding with the rated sine voltage defined by:  $U_s^2/R$ , where  $U_s$  indicates the rated sin voltage and R indicates the rated impedance of the speaker.

### 5.3 Rated noise power.

The rated sine power corresponding with the rated sine voltage defined by:  $U_n^2/R$ , where  $U_n$  indicates the rated sin voltage and R indicates the rated impedance of the speaker.
