

The information provided in this documentation contains general descriptions and/or technical characteristics of the performance of the products contained herein.  
This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications.  
It is the duty of any such user or integrator to perform the appropriate and complete risk analysis, evaluation and testing of the products with respect to the relevant specific application or use thereof.  
Neither Schneider Electric Industries SAS nor any of its affiliates or subsidiaries shall be responsible or liable for misuse of the information contained herein.

### Sensor Connection

It is possible to connect either 1 or 3 sensors on terminals AI2 or AI3.

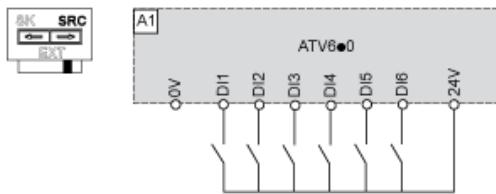

### Sink / Source Switch Configuration

---

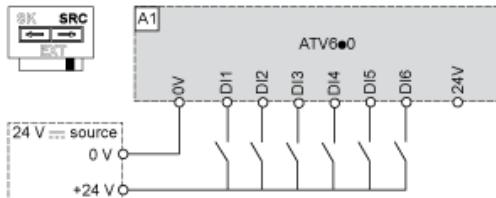

The switch is used to adapt the operation of the logic inputs to the technology of the programmable controller outputs.

- Set the switch to Source (factory setting) if using PLC outputs with PNP transistors.
- Set the switch to Ext if using PLC outputs with NPN transistors.

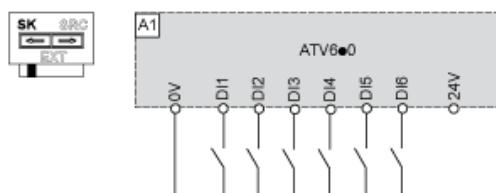

### Switch Set to SRC (Source) Position Using the Output Power Supply for the Digital Inputs

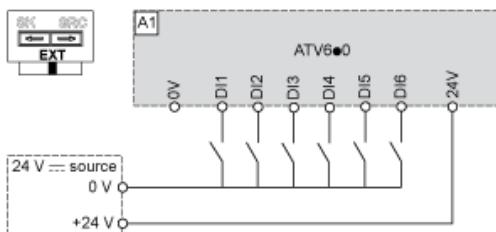

### Switch Set to SRC (Source) Position and Use of an External Power Supply for the DIs

### Switch Set to SK (Sink) Position Using the Output Power Supply for the Digital Inputs

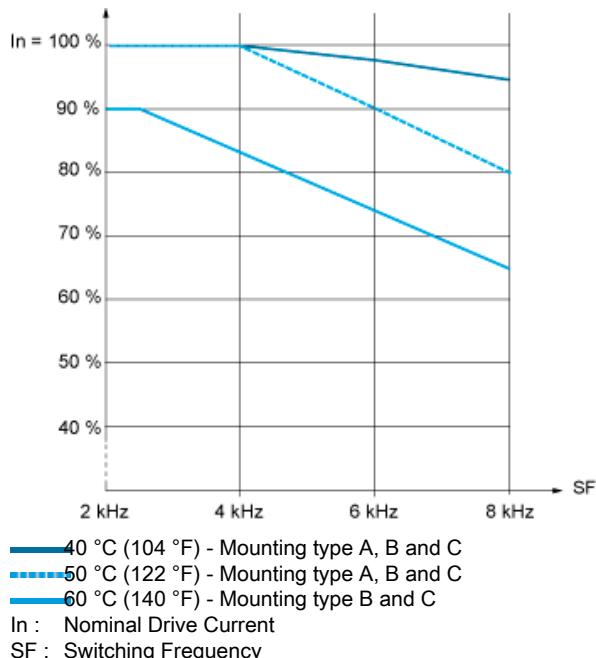

### Switch Set to EXT Position Using an External Power Supply for the DIs
