

## LM146/LM346 Programmable Quad Operational Amplifiers

Check for Samples: [LM146](#), [LM346](#)

### FEATURES

- ( $I_{SET}=10\ \mu A$ )
- Programmable Electrical Characteristics
- Battery-Powered Operation
- Low Supply Current: 350  $\mu A$ /Amplifier
- Ensured Gain Bandwidth Product: 0.8 MHz Min
- Large DC Voltage Gain: 120 dB
- Low Noise Voltage: 28 nV/ $\sqrt{Hz}$
- Wide Power Supply Range:  $\pm 1.5V$  to  $\pm 22V$
- Class AB Output Stage—No Crossover Distortion
- Ideal Pin Out for Biquad Active Filters
- Input Bias Currents are Temperature Compensated

### DESCRIPTION

The LM146 series of quad op amps consists of four independent, high gain, internally compensated, low power, programmable amplifiers. Two external resistors ( $R_{SET}$ ) allow the user to program the gain bandwidth product, slew rate, supply current, input bias current, input offset current and input noise. For example, the user can trade-off supply current for bandwidth or optimize noise figure for a given source resistance. In a similar way, other amplifier characteristics can be tailored to the application. Except for the two programming pins at the end of the package, the LM146 pin-out is the same as the LM124 and LM148.

### Connection Diagram

**Figure 1. Dual-In-Line Package - Top View**  
See Package Number NFE0016A, D0016A or N16A

### PROGRAMMING EQUATIONS

**Total Supply Current** = 1.4 mA ( $I_{SET}/10\ \mu A$ )

**Gain Bandwidth Product** = 1 MHz ( $I_{SET}/10\ \mu A$ )

**Slew Rate** = 0.4V/ $\mu s$  ( $I_{SET}/10\ \mu A$ )

**Input Bias Current**  $\approx$  50 nA ( $I_{SET}/10\ \mu A$ )

$I_{SET}$  = Current into pin 8, pin 9 (see [Schematic Diagram](#))

$$I_{SET} = \frac{V^+ - V^- - 0.6V}{R_{SET}}$$

## Capacitorless Active Filters (Basic Circuit)

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## ABSOLUTE MAXIMUM RATINGS<sup>(1)(2)(3)</sup>

			LM146	LM346
Supply Voltage			±22V	±18V
Differential Input Voltage <sup>(2)</sup>			±30V	±30V
CM Input Voltage <sup>(2)</sup>			±15V	±15V
Power Dissipation <sup>(4)</sup>			900 mW	500 mW
Output Short-Circuit Duration <sup>(5)</sup>			Continuous	Continuous
Operating Temperature Range			–55°C to +125°C	0°C to +70°C
Maximum Junction Temperature			150°C	100°C
Storage Temperature Range			–65°C to +150°C	–65°C to +150°C
Lead Temperature (Soldering, 10 seconds)			260°C	260°C
Thermal Resistance ( $\theta_{jA}$ ) <sup>(4)</sup>	CDIP (NFE)	Pd	900 mW	900 mW
		$\theta_{jA}$	100°C/W	100°C/W
	SOIC (D)	$\theta_{jA}$		115°C/W
	PDIP (N)	Pd		500 mW
		$\theta_{jA}$		90°C/W
Soldering Information	Dual-In-Line Package	Soldering (10 seconds)	+260°C	+260°C
	Small Outline Package	Vapor Phase (60 seconds)	+215°C	+215°C
		Infrared (15 seconds)	+220°C	+220°C
ESD rating is to be determined.				

(1) Refer to RETS146X for LM146J military specifications.

(2) For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

(3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.

(4) The maximum power dissipation for these devices must be derated at elevated temperatures and is dictated by  $T_{jMAX}$ ,  $\theta_{JA}$ , and the ambient temperature,  $T_A$ . The maximum available power dissipation at any temperature is  $P_d = (T_{jMAX} - T_A) / \theta_{JA}$  or the 25°C  $P_{dMAX}$ , whichever is less.

(5) Any of the amplifier outputs can be shorted to ground indefinitely; however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

## DC ELECTRICAL CHARACTERISTICS

 $(V_S = \pm 15V, I_{SET} = 10 \mu A)^{(1)}$ 

Parameter	Conditions	LM146			LM346			Units
		Min	Typ	Max	Min	Typ	Max	
Input Offset Voltage	$V_{CM} = 0V, R_S \leq 50\Omega, T_A = 25^\circ C$		0.5	5		0.5	6	mV
Input Offset Current	$V_{CM} = 0V, T_A = 25^\circ C$		2	20		2	100	nA
Input Bias Current	$V_{CM} = 0V, T_A = 25^\circ C$		50	100		50	250	nA
Supply Current (4 Op Amps)	$T_A = 25^\circ C$		1.4	2.0		1.4	2.5	mA

## APPLICATION HINTS

Avoid reversing the power supply polarity; the device will fail.

### COMMON-MODE INPUT VOLTAGE

The negative common-mode voltage limit is one diode drop above the negative supply voltage. Exceeding this limit on either input will result in an output phase reversal. The positive common-mode limit is typically 1V below the positive supply voltage. No output phase reversal will occur if this limit is exceeded by either input.

### OUTPUT VOLTAGE SWING VS $I_{SET}$

For a desired output voltage swing the value of the minimum load depends on the positive and negative output current capability of the op amp. The maximum available positive output current, ( $I_{CL+}$ ), of the device increases with  $I_{SET}$  whereas the negative output current ( $I_{CL-}$ ) is independent of  $I_{SET}$ . Figure 26 illustrates the above.

Figure 26. Output Current Limit vs  $I_{SET}$

### INPUT CAPACITANCE

The input capacitance,  $C_{IN}$ , of the LM146 is approximately 2 pF; any stray capacitance,  $C_S$ , (due to external circuit layout) will add to  $C_{IN}$ . When resistive or active feedback is applied, an additional pole is added to the open loop frequency response of the device. For instance with resistive feedback (Figure 27), this pole occurs at  $\frac{1}{2}\pi (R_1 || R_2) (C_{IN} + C_S)$ . Make sure that this pole occurs at least 2 octaves beyond the expected -3 dB frequency corner of the closed loop gain of the amplifier; if not, place a lead capacitor in the feedback such that the time constant of this capacitor and the resistance it parallels is equal to the  $R_1(C_S + C_{IN})$ , where  $R_1$  is the input resistance of the circuit.

Figure 27. Resistive Feedback Circuit Example

### TEMPERATURE EFFECT ON THE GBW

The GBW (gain bandwidth product), of the LM146 is directly proportional to  $I_{SET}$  and inversely proportional to the absolute temperature. When using resistors to set the bias current,  $I_{SET}$ , of the device, the GBW product will decrease with increasing temperature. Compensation can be provided by creating an  $I_{SET}$  current directly proportional to temperature (see Typical Applications).

### ISOLATION BETWEEN AMPLIFIERS

The LM146 die is isothermally layed out such that crosstalk between *all* 4 amplifiers is in excess of -105 dB (DC). Optimum isolation (better than -110 dB) occurs between amplifiers A and D, B and C; that is, if amplifier A dissipates power on its output stage, amplifier D is the one which will be affected the least, and vice versa. Same argument holds for amplifiers B and C.

## LM146 TYPICAL PERFORMANCE SUMMARY

The LM146 typical behaviour is shown in Figure 28. The device is fully predictable. As the set current,  $I_{SET}$ , increases, the speed, the bias current, and the supply current increase while the noise power decreases proportionally and the  $V_{OS}$  remains constant. The usable GBW range of the op amp is 10 kHz to 3.5–4 MHz.

Figure 28. LM146 Typical Characteristics

**Low Power Supply Operation:** The quad op amp operates down to  $\pm 1.3V$  supply. Also, since the internal circuitry is biased through programmable current sources, no degradation of the device speed will occur.

## SPEED VS POWER CONSUMPTION

LM146 vs LM4250 (single programmable). Through Figure 29, we observe that the LM146's power consumption has been optimized for GBW products above 200 kHz, whereas the LM4250 will reach a GBW of no more than 300 kHz. For GBW products below 200 kHz, the LM4250 will consume less power.

Figure 29. LM146 vs LM4250

## Typical Applications

$$I_{SET} \cong \frac{|V^-| - 0.6V}{R_{SET}}$$

Figure 30. Dual Supply or Negative Supply Biasing

$$I_{SET} \cong \frac{V^+ - 0.6V}{R_{SET}}$$

Figure 31. Single (Positive) Supply Biasing

$$I_{SET} = \frac{67.7 \text{ mV}}{R_{SET}}$$

- The LM334 provides an  $I_{SET}$  directly proportional to absolute temperature. This cancels the slight GBW product Temperature coefficient of the LM346.

**Figure 32. Current Source Biasing with Temperature Compensation**

$$\frac{I_{SET1}}{I_{SET2}} = \frac{R2}{R1}, I_{SET1} + I_{SET2} = \frac{67.7 \text{ mV}}{R_{SET}}$$

- For  $I_{SET1} \approx I_{SET2}$  resistors R1 and R2 are not required if a slight error between the 2 set currents can be tolerated. If not, then use  $R1 = R2$  to create a 100 mV drop across these resistors.

**Figure 33. Biasing all 4 Amplifiers with Single Current Source**

## Active Filters Applications

Figure 34. Basic (Non-Inverting “State Variable”) Active Filter Building Block

- The LM146 quad programmable op amp is especially suited for active filters because of their adequate GBW product and low power consumption.

**Circuit synthesis equations** (for circuit analysis equations, consult with the LM148 data sheet).

Need to know desired:  $f_o$  = center frequency measured at the BP output

$Q_o$  = quality factor measured at the BP output

$H_o$  = gain at the output of interest (BP or HP or LP or all of them)

- Relation between different gains:  $H_o(BP) = 0.316 \times Q_o \times H_o(LP)$ ;  $H_o(LP) = 10 \times H_o(HP)$

- $R \times C = \frac{5.033 \times 10^{-2}}{f_o}$  (sec)

- For BP output:  $R_Q = \left( \frac{3.478 Q_o - H_o(BP)}{10^5} - \frac{H_o(BP)}{10^5 \times 3.748 \times Q_o} \right)^{-1}$ ;  $R_{IN} = \frac{\left( \frac{3.478 Q_o}{H_o(BP)} - 1 \right)}{\frac{1}{RQ} + 10^{-5}}$

- For HP output:  $R_Q = \frac{1.1 \times 10^5}{3.478 Q_o (1.1 - H_o(HP)) - H_o(HP)}$ ;  $R_{IN} = \frac{\frac{1.1}{H_o(HP)} - 1}{\frac{1}{RQ} + 10^{-5}}$

- For LP output:  $R_Q = \frac{11 \times 10^5}{3.478 Q_o (11 - H_o(LP)) - H_o(LP)}$ ;  $R_{IN} = \frac{\frac{11}{H_o(LP)} - 1}{\frac{1}{RQ} + 10^{-5}}$

- For BR (notch) output: Use the 4th amplifier of the LM146 to sum the LP and HP outputs of the basic filter.

**Note.** All resistor values are given in ohms.

$$\sqrt{\frac{R_H}{R_L}} = 0.316 \frac{f_{notch}}{f_o}$$

Determine  $R_F$  according to the desired gains:  $H_{O(BR)} \Big|_{f < f_{notch}} = \frac{R_F}{R_L} H_{O(LP)}$ ,  $H_{O(BR)} \Big|_{f > f_{notch}} = \frac{R_F}{R_H} H_{O(HP)}$

- **Where to use amplifier C:** Examine the above gain relations and determine the dynamics of the filter. Do not allow slew rate limiting in any output ( $V_{HP}$ ,  $V_{BP}$ ,  $V_{LP}$ ), that is:

$$V_{IN(peak)} < 63.66 \times 10^3 \times \frac{I_{SET}}{10 \mu A} \times \frac{1}{f_o \times H_o} \text{ (Volts)}$$

If necessary, use amplifier C, biased at higher  $I_{SET}$ , where you get the largest output swing.

**Deviation from Theoretical Predictions:** Due to the finite GBW products of the op amps the  $f_o$ ,  $Q_o$  will be slightly different from the theoretical predictions.

$$f_{\text{real}} \cong \frac{f_0}{1 + \frac{2f_0}{\text{GRW}}}, Q_{\text{real}} \cong \frac{Q_0}{1 - \frac{3.2f_0 \times Q_0}{\text{GRW}}}$$

- If resistive biasing is used to set the LM346 performance, the  $Q_0$  of this filter building block is nearly insensitive to the op amp's GBW product temperature drift; it has also better noise performance than the state variable filter.

**Figure 35. A Simple-to-Design BP, LP Filter Building Block**

### Circuit Synthesis Equations

$$H_{0(BP)} = Q_0 H_{0(LP)}; R \times C = \frac{0.159}{f_0}; R_Q = Q_0 \times R; R_{IN} = \frac{R_Q}{H_{0(BP)}} = \frac{R}{H_{0(LP)}}$$

- For the eventual use of amplifier C, see comments above.

(2)

**Figure 36. A 3-Amplifier Notch Filter (or Elliptic Filter Building Block)**

## Circuit Synthesis Equations

$$R \times C = \frac{0.159}{f_o}; R_o = Q_o \times R; R_{IN} = \frac{0.159 \times f_o}{C' \times f_{notch}^2}$$

$$H_o(BR)|_{f < f_{notch}} = \frac{R}{R_{IN}} H_o(BR)|_{f > f_{notch}} = \frac{C'}{C}$$

•For nothing but a notch output:  $R_{IN}=R$ ,  $C'=C$ .

(3)

Figure 37. Capacitorless Active Filters (Basic Circuit)

• This is a BP, LP, BR filter. The filter characteristics are created by using the tunable frequency response of the LM346.

• **Limitations:**  $Q_o < 10$ ,  $f_o \times Q_o < 1.5$  MHz, output voltage should not exceed  $V_{peak(out)} \leq \frac{63.66 \times 10^3}{f_o} \times \frac{I_{SET}(\mu A)}{10 \mu A}$  (V)

• Design equations:  $a = \frac{R6 + R5}{R6}$ ,  $b = \frac{R2}{R1 + R2}$ ,  $c = \frac{R3}{R3 + R4}$ ,  $d = \frac{R7}{R8 + R7}$ ,  $e = \frac{R10}{R9 + R10}$ ,  $f_o(BP) = f_u \sqrt{\frac{b}{a}}$ ,  $H_o(BP) = a \times c$ ,  $H_o(LP) = \frac{c}{b}$ ,  $Q_o = \sqrt{a \times b}$

$f_o(BR) = f_o(BP) \left( 1 - \frac{c}{b} \right) \cong f_o(BP) (C < 1)$  provided that  $d = H_o(BP) \times e$ ,  $H_o(BR) = \frac{R10}{R9}$ .

• Advantage:  $f_o Q_o$ ,  $H_o$  can be independently adjusted; that is, the filter is extremely easy to tune.

• Tuning procedure (ex. BP tuning)

1. Pick up a convenient value for b; ( $b < 1$ )
2. Adjust  $Q_o$  through R5
3. Adjust  $H_o(BP)$  through R4
4. Adjust  $f_o$  through  $R_{SET}$ . This adjusts the unity gain frequency ( $f_u$ ) of the op amp.

Ex:  $f_c = 20 \text{ kHz}$ ,  $H_o$  (gain of the filter) = 1,  $Q_{o1} = 0.541$ ,  $Q_{o2} = 1.306$ .

- Since for this filter the GBW product of all 4 amplifiers has been designed to be the same (~1 MHz) only one current source can be used to bias the circuit. Fine tuning can be further accomplished through  $R_b$ .

**Figure 38. A 4th Order Butterworth Low Pass Capacitorless Filter**

## Miscellaneous Applications

- For better performance, use a matched NPN pair.

### Figure 39. A Unity Gain Follower with Bias Current Reduction

- By pulling the SET pin(s) to  $V^-$  the op amp(s) shuts down and its output goes to a high impedance state. According to this property, the LM346 can be used as a very low speed analog switch.

## PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LM346M/NOPB	LIFEBUY	SOIC	D	16	48	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	0 to 70	LM346M	
LM346MX/NOPB	LIFEBUY	SOIC	D	16	2500	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	0 to 70	LM346M	

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
