65XXN
WIRELESS BLUETOOTH PRESSURE TRANSDUCER

General Description

The 65XXN is a high accuracy wireless transducer that eliminates hard wiring and provides remote process monitoring via Bluetooth Low Energy (BLE) wireless communication. This series is suitable for measurement of liquid or gas pressure, even for difficult media such as contaminated water, steam, and mildly corrosive fluids.

The 65XXN is certified to:

IS Class I, Division 1 Groups A, B, C, D, T4

Class I Zone 0, AEx ia IIC T4 Ga

Ex ia IIC T4 Ga

Ta / Process Temp: -30°C to +75°C

The wetted material of the pressure port is made of 316L stainless steel and the transducer's durability is excellent with no O-rings or organics exposed to the pressure media. The 65XXN is weatherproof and exceeds the latest heavy industrial CE requirements.

Features

- Light weight and small form factor
- Programmable thresholds for event detection
- Easy device configuration via TE SensorConnect smartphone application
- Explosive atmosphere certified
- Programmable and customer configurable
- BSPP / NPT thread options available

Applications

- Oil well monitoring
- Pipeline monitoring
- Corrosive fluids and gas measurement systems
- Condition monitoring

Key Specifications

- Supports pressure ranges from 2 to 350 bar (30 to 5000 PSI)
- Max weight: 170g (with battery)
- Accuracy as high as ±0.1%FS
- Bluetooth Low Energy 5.0
- Weatherproof (IP66/IP67)
- Wide operating Temperature range as -30°C to 75°C
- Rugged construction can withstand 50g shock/8g vibration.

1 PERFORMANCE SPECIFICATIONS

1.1 Standard ranges:

Pressure Range (Bar)	Pressure range (psi)	Absolute
0 to 2	0 to 30	•
0 to 7	0 to 100	•
0 to 20	0 to 300	•
0 to 35	0 to 500	•
0 to 200	0 to 2900	•
0 to 350	0 to 5000	•

1.2 Absolute maximum ratings (1):

Parameter	Symbol	Min	Typ.	Max	Unit	Notes/Conditions
Supply voltage	VDD			3.6	V	Reference to Ground
VDD to GND		-0.3		3.9	V	
Shock limit	g_{max}		50		g	Half sine shock per MIL-STD-202F, Method 213B, Condition A
ESD			4		kV	Contact Discharge

(1) Maximum limits to which the sensor will withstand without damage

1.3 Operation specification:

Unless otherwise specified, all parameters are measured at 25°C @ 3.0V applied.

Parameter	Symbol	Min	Typ.	Max	Unit	Notes/Conditions
Accuracy 0 to 35 bar		-0.1%		+0.1%	%Span	RSS combined linearity, hysteresis, and repeatability.
Accuracy 0 to 350 bar		-0.25%		+0.25%	%Span	
Pressure cycles		1.00E+06			0FS Cycles	
Burst pressure		4X			Rated	
Proof Pressure		3X			Rated	
Long term stability			±0.1		%Span/ year	
Total error band		-1		1	%Span	
Resolution			16		bits	

1.4 Environmental specifications:

Parameter	Symbol	Min	Typ.	Max	Unit	Notes/Conditions
Operating temperature	T°	-30		+75	°C	
Ambient humidity	%RH	0		95	%	
Atmosphere pressure		250		1400	mbar	
Ingress protection	IP		IP66/67			
EMI/RFI/ESD protection			IEC61000-4-2, ICE61000-4-6			
Storage condition			According to IEC 60721-3-1:2018 Class 1K22			Without battery / 85 %RH Max
Vibration			8g 7Hz-200Hz			

1.5 Communication specification (BLE):

Parameter	Symbol	Min	Typ.	Max	Unit	Notes/Conditions
Wireless protocol			BLE 5.0			
Operating frequency BLE			2.4		GHz	
Receiver sensitivity		-129		-127	dBm	
Advertising interval			1		sec	Factory default configuration
Transmit power	Max		+4		dBm	

1.6 Physical:

Parameter	Symbol	Min	Typ.	Max	Unit	Notes/Conditions
Media compatibility		External exposed surfaces: 316 stainless steel PET GF EPDM O-ring				
Weight	Max		155±10		g	without battery
Dimension			See section 7		mm	
Mounting		Wrench size: 1-7/16in or 36mm				Refer to the installation manual (Doc# 20027955-01)

1.7 Compliance/regulatory:

Compliance Type	Notes/Conditions
Bluetooth Signal Compliance	Worldwide application
FCC Certified	United States
ISED Certified	Canada
RED Compliance	Europe (EU)
RoHS Compliance	
REACH Compliance	
Explosive Atmospheres Certifications	United States, Canada, ATEX, IECEx
CE Certification	Europe (EU)
UKCA Certification	Great Britain

2 INTRINSIC SAFETY MODELS:

This Equipment is certified for Intrinsic Safety when model code “EX” is selected during the ordering process. Please see ordering information in section 8 for details:

Intrinsic Safety approval is as follows:

IS Class I, Div1, Groups A, B, C, and D;
Class I Zone 0, AEx ia IIC T4 Ga;
Ex ia IIC T4 Ga;

II 1 G Ex ia IIC T4 Ga

3 GENERAL DESCRIPTION:

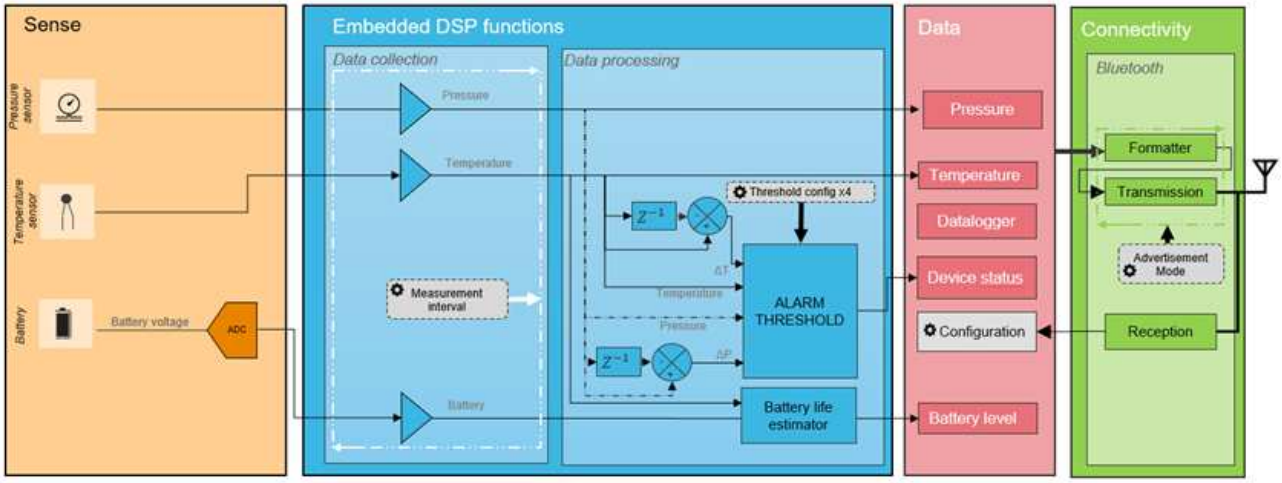
Refer to the User Manual (Doc# 20027955-12) for a detailed explanation of all sensors features and functions.

3.1 Block diagram/schematic:

The system operates as a smart device. It offers sensor acquisition, processing, analysis, and wireless communication capabilities.
Processing and analysis functions offer the end user flexibility and cover most applications.
The device computes pressure in a smart way:

- Delta detection
- raw data

In a BLE only system, the data is sent over BLE advertisement. BLE is used to configure the sensor and access to others feature as datalog, live data,...



!The temperature provided is used for internal processing and should not be used as accurate temperature data!

The product has two BLE modes:

- Advertisement Mode: provides data periodically
- Connected Mode: mode for configuration and advanced features. Each advertisement gives the user the opportunity to switch to Connected mode. It’s the only way to go into connected mode.

4 BATTERY:

4.1 Saft LS17330:

The system should be exclusively powered with an LS17330 battery.

Parameters	Typical value
Manufacturer	SAFT
Reference	LS 17330
Technology	Primary lithium-thionyl chloride (Li-SOCl2)
Nominal voltage	3.6 V
Capacity at 20°C	2100 mA

4.2 Battery life:

The 65XXN Pressure sensor is designed to use battery power in the most efficient ways possible. However, battery quality, long term ambient temperature conditions, data collection and transmission intervals, and spreading factor will impact overall battery life.

- Battery Quality – Batteries for the sensor must be acquired from authorized distributors and sources. This ensures that batteries have been stored and transported in temperature conditions that do not exceed the manufacturer's recommended limits. End users must also store batteries within these temperature limits. If batteries are exposed to temperatures exceeding recommended limits, battery life will be affected.

- Ambient Temperature Conditions – Optimum battery life can be expected when the ambient temperature is near 25ºC. In most applications, the temperature will vary within the specified limits. These variations can shorten battery life.

- Data Collection and Transmission Intervals – The sensor consumes the most power when it is taking measurements, processing the data, and transmitting the information via radios. The user can select the intervals for these actions. Longer intervals will consume less battery power and result in longer battery life.

- Under the most ideal conditions, a battery life of 8 years is expected. However, each application will have conditions that are something less than ideal.

4.3 Battery replacement:

The 65XXN's battery must be replaced if depleted.

N.B.: It is only allowed to replace the battery in non-hazardous areas.

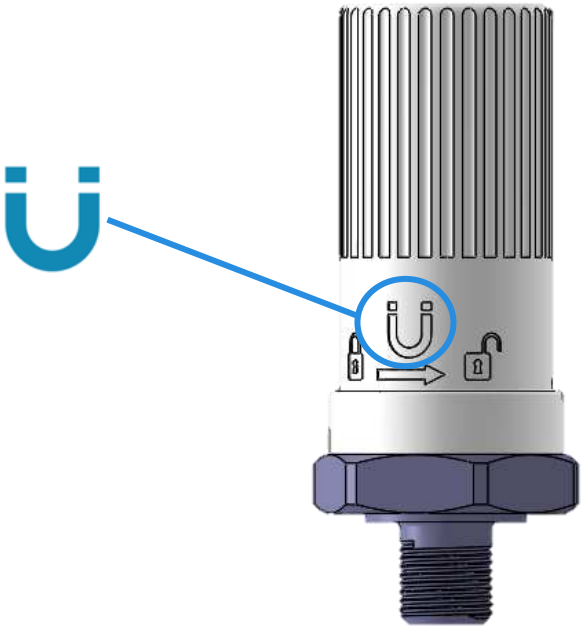
- Remove the plastic cover following the opening direction
- Use the orange ribbon to pull out the battery
- Put the orange ribbon back in the cavity before installing the new battery. Note that it MUST be replaced by the same battery reference 3.6 V SAFT battery LS17330.
- Put the spacer on the negative terminal and install the battery positive upward
- Pull the spacer out
- Install the plastic cover and tighten it following the locking direction. Refer to the Installation Manual or the Quick start guide specific details regarding battery installation and replacement.

Once the battery replacement is completed, the battery life estimator in the firmware must be reset to a "full" battery status. The battery status can be reset using the TE SensorConnect App available from Apple App Store or Google Play Store.

!This action is mandatory otherwise the battery level will stay at 0%!

5 MAGNETIC SWITCH:

If the user wants to make an asynchronous data acquisition, or access to BLE connected mode, they can use the magnet. The magnet event will trigger a measurement, then the sensor will be in Preliminary Phase.
The magnetic switch location is indicated by the magnet drawing on the plastic cover.



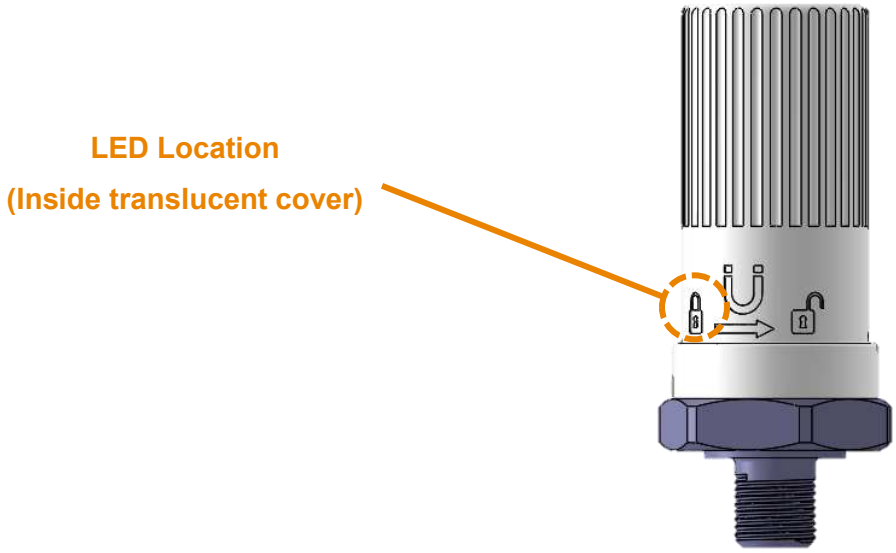
The magnet must be of sufficient strength and proximity to create a magnetic field of 25 mT at the switch location.
Two different functions are available depending on the user action:

Function	User action	LED
Activates BLE for another one hour plus triggers a new measurement.	Short tap	One fast blink. If user holds the magnet close to the switch for a longer duration, the LED will blink faster. Remove the magnet to only initiate a transmission, or else a sensor reset will be initiated.
Resets the sensor.	Hold the magnet for 10 seconds.	Wait for at least 10 seconds, to see the very fast blink. Release the magnet once a very long orange LED appears

6 LED:

A yellow LED is used to indicate user some specific event:

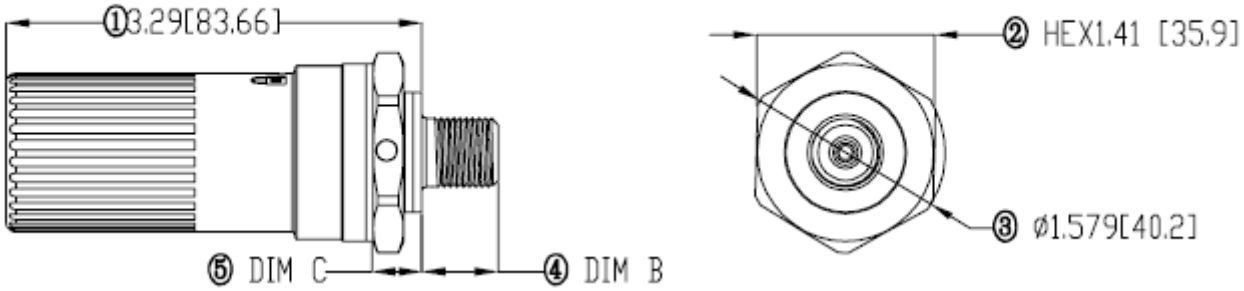
		Led Behavior
Battery insertion		ON for 2s
Magnet event		ON for 200ms
Maintaining Magnet	<3s	Slow blinking
	[3s-10s]	Fast blinking
	>10s	OFF -> reboot



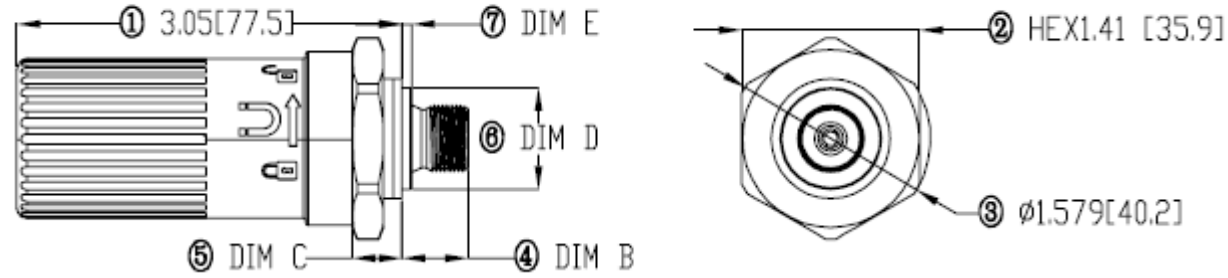
7 DIMENSIONS:

Dimensions units: Inches [Millimeter]

COMPOUND TYPE CRITICAL DIMENSIONS



ABSOLUTE TYPE CRITICAL DIMENSIONS

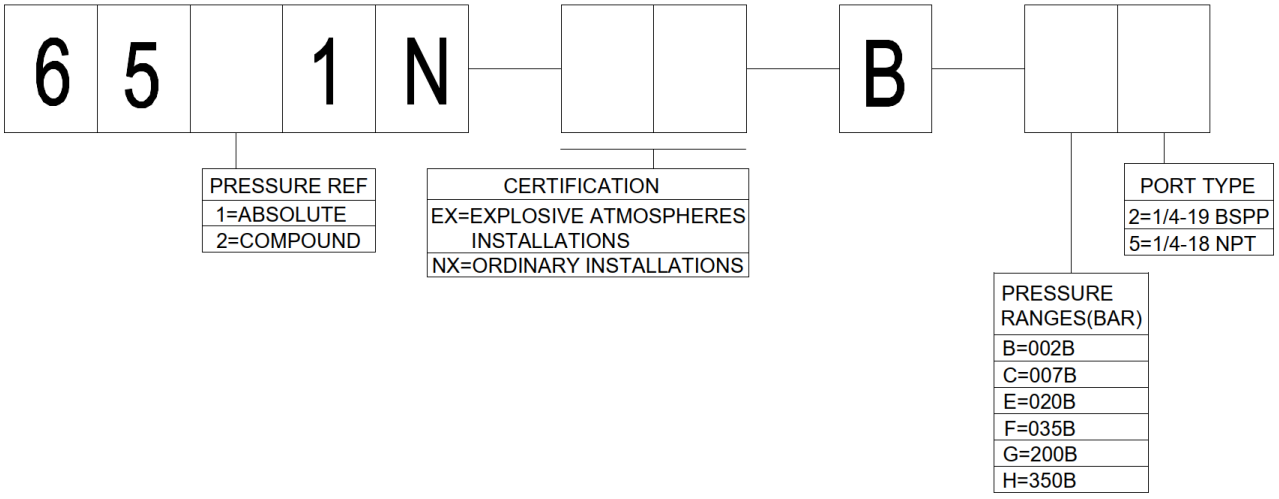


PORT TYPE	PRESSURE RANGE	DIM B TYP.	DIM D TYP.	DIM E TYP.
1/4-18 NPT	2 BAR	0.60 [15.24]	NA	NA
	7 BAR			
	20 BAR			
	35 BAR			
	200 BAR			
	350 BAR			
1/4-19 BSPP	2 BAR	0.526 [13.36]	0.80 [20.32]	0.075 [1.905]
	7 BAR			
	20 BAR			
	35 BAR			
	200 BAR			
	350 BAR			

Pressure Range	PRESSURE REF	DIM C TYP.
2, 7, 20, 35 BAR	ABSOLUTE	0.397[10.08]
	COMPOUND	0.391[9.92]
200, 350 BAR	ABSOLUTE COMPOUND	0.397[10.08]

8 ORDERING INFORMATION:

BLE Sensor Model Number



9 PART NUMBERING KEY:

The 65XXN is packaged in kits that contain battery and a battery insertion tool. Use the TCPN number when ordering to ensure that you receive the proper kit.

Order TCPN	Sensor Model Number	Sensor Description	Battery (Saft 17330)	Battery Insert Tool
