660ns µP-Compatible, 8-Bit ADC with Track/Hold

MX7821

General Description

The MX7821 high-speed, microprocessor-compatible (µP), 8-bit analog-to-digital converter (ADC) is a plug-in upgrade for the industry-standard 7820. The MX7821 uses a half-flash technique, resulting in a 660ns conversion time vs. 1.36µs for the 7820. A VSS pin, not supplied by the 7820, supports dual power supplies and bipolar analog inputs.

The MX7821 has track-and-hold function capable of digitizing a 100kHz signal, and is tested for both its static and dynamic capability. The converter-µP interface appears as a memory location or input/output port that requires no external interface logic. The data outputs use latched, three-state buffered circuitry for direct connection to a µP data bus or system input port. The MX7821 has an overflow output for cascading devices to attain higher resolution. The ADC's input/reference arrangement enables ratiometric operation. For a detailed description of MX7821 operation, refer to the MX7820 data sheet.

Applications

Digital-Signal Processing

High-Speed Data Acquisition

High-Speed Servo Loops

Audio Systems

Features

- ♦ 660ns Conversion Time
- ♦ 20-Pin Narrow DIP Package
- ♦ No External Clock
- ♦ Pin-Compatible Upgrade for Industry-Standard 7820
- ♦ 100kHz Input Signal Bandwidth
- ♦ Bipolar/Unipolar Inputs
- ♦ Single +5V or Dual ±5V Supplies
- ♦ Ratiometric Reference Inputs
- ♦ Static and Dynamic Tested
- ♦ Internal Track/Hold

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
