17.7 GHz to 19.7 GHz, Low Noise Amplifier

Data Sheet **ADL5725**

FEATURES

- Frequency range: 17.7 GHz to 19.7 GHz
- Typical gain of >25.1 dB
- Low noise input
  - Noise figure: 2.4 dB typical
- High linearity input
  - >−1.5 dBm typical input third-order intercept (IIP3)
  - −11.5 dBm input 1 dB compression point (P1dB) at 19.7 GHz
- Matched 50 Ω single-ended input
- Matched 100 Ω differential outputs
- 8-lead, 2.00 mm × 2.00 mm LFCSP microwave packaging

APPLICATIONS

- Point to point microwave radios
- Instrumentation
- Satellite communications (SATCOM)
- Phased arrays

FUNCTIONAL BLOCK DIAGRAM

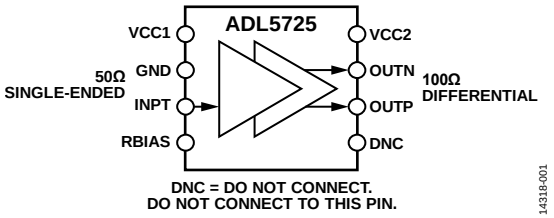

Figure 1.

GENERAL DESCRIPTION

The ADL5725 is a narrow-band, high performance, low noise amplifier (LNA) targeting microwave radio link receiver designs. The monolithic silicon germanium (SiGe) design is optimized for microwave radio link bands ranging from 17.7 GHz to 19.7 GHz. The unique design offers a single-ended 50 Ω input impedance and provides a 100 Ω balanced differential output that is ideal for driving Analog Devices, Inc., differential downconverters and radio frequency (RF) sampling analog-to-digital converters (ADCs).

This low noise amplifier provides noise figure performance that, in the past, required more expensive three-five (III-V) compounds process technology to achieve.

The ADL5721 and ADL5723 to ADL5726 family of narrow-band LNAs are each packaged in a tiny, thermally enhanced, 2.00 mm × 2 mm LFCSP package. The ADL5721 and ADL5723 to ADL5726 family operates over the temperature range of −40°C to +85°C.

Output Return Loss (S22)			8		dB
FREQUENCY = 19.7 GHz					
Gain (S21)			25.1		dB
Noise Figure			2.4		dB
Input Third-Order Intercept (IIP3)	Δf = 1 MHz, P_{IN} = −30 dBm per tone		2.0		dBm
Input 1 dB Compression Point (P1dB)			−11.5		dBm
Input Return Loss (S11)			10		dB
Output Return Loss (S22)			10		dB

DC SPECIFICATIONS

Table 2.

Parameter	Test Conditions/Comments	Min	Typ	Max	Unit
POWER INTERFACE					
Voltage					
VCC1		1.65	1.8	1.95	V
VCC2		3.1	3.3	3.5	V
Quiescent Current vs. Temperature					
VCC1	T_A = 25°C		18		mA
	−40°C ≤ T_A ≤ +85°C		19		mA
VCC2	T_A = 25°C		88		mA
	−40°C ≤ T_A ≤ +85°C		89		mA

ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
Supply Voltages	
VCC1	2.25 V
VCC2	4.1 V
Maximum Junction Temperature	150°C
Operating Temperature Range	−40°C to +85°C
Storage Temperature Range	−55°C to +125°C
Lead Temperature Range (Soldering, 60 sec)	−65°C to +150°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

θ_{JA} is thermal resistance, junction to ambient (°C/W), θ_{JB} is thermal resistance, junction to board (°C/W), and θ_{JC} is thermal resistance, junction to case (°C/W).

Table 4. Thermal Resistance

Package Type	θ_{JA}[1]	θ_{JB}[1]	θ_{JC}[1]	Unit
8-Lead LFCSP	39.90	23.88	3.71	°C/W

[1] See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance for a printed circuit board (PCB) with 3 × 4 vias.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

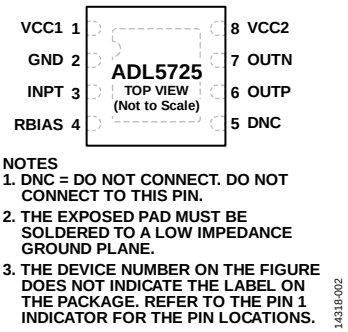

Figure 2. Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	VCC1	1.8 V Power Supply. It is recommended to place the decoupling capacitors as close to this pin as possible.
2	GND	Ground.
3	INPT	RF Input. This is a 50 Ω single-ended input.
4	RBIAS	Resistor Bias. For typical operation, connect a 357 Ω resistor from RBIAS to GND. It is recommended to place the RBIAS resistor as close to the pin as possible.
5	DNC	Do Not Connect. Do not connect to this pin.
6, 7	OUTP, OUTN	RF Outputs. These pins are 100 Ω differential outputs.
8	VCC2	3.3 V Power Supply. It is recommended to place the decoupling capacitors as close to this pin as possible.
	EPAD (EP)	Exposed Pad. The exposed pad must be soldered to a low impedance ground plane.

THEORY OF OPERATION

The ADL5725 is a narrow-band, high performance, low noise amplifier targeting microwave radio link receiver designs. The monolithic SiGe design is optimized for microwave radio link bands ranging from 17.7 GHz to 19.7 GHz.

The unique design of the ADL5725 offers a single-ended 50 Ω input impedance via the INPT pin, and provides a 100 Ω balanced differential output via the OUTP and OUTN pins.

This LNA is ideal for driving Analog Devices differential downconverters and RF sampling ADCs.

The ADL5725 provides cost-effective noise figure performance without requiring more expensive III-V compounds process technology.

The ADL5725 is available in a 2.00 mm × 2.00 mm LFCSP package, and operates over the temperature range of −40°C to +85°C.

APPLICATIONS INFORMATION

LAYOUT

Solder the exposed pad on the underside of the ADL5725 to a low thermal and electrical impedance ground plane. This pad is typically soldered to an exposed opening in the solder mask on the evaluation board. Connect the ground vias to all other ground layers on the evaluation board to maximize heat dissipation from the device package.

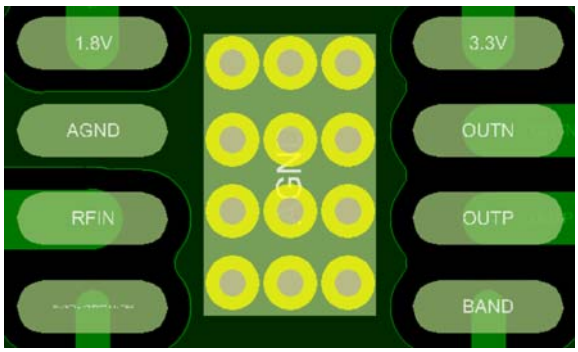

Figure 13. Evaluation Board Layout for the ADL5725 Package

DIFFERENTIAL vs. SINGLE-ENDED OUTPUT

This section provides the test results that compare the ADL5725 using a differential vs. single-ended output. When using the device as a single-ended output, use the RFOP output of the evaluation board and terminate RFON to 50 Ω. Note that the converse can be done as well; however, doing so produces slightly different results from the plots shown in this section because there is some amplitude imbalance between the two differential ports, RFOP and RFON. The output trace and connector loss were not deembedded for these measurements.

EVALUATION BOARD

The ADL5725-EVALZ comes with an ADL5725 chip. It supports a single 5 V supply for ease of use. For 5 V operation, use the 3.3 V and 1.8 V test loops for evaluation purposes only. When using a 3.3 V or 1.8 V supply, remove the R1 and R2 resistors from the evaluation board. Figure 19 shows the ADL5725-EVALZ evaluation board lab bench setup.

INITIAL SETUP

To set up the ADL5725-EVALZ, take the following steps:

1. Power up the ADL5725-EVALZ with a 5 V dc supply. The supply current of the evaluation board is approximately 111 mA, which is a combination of the VCC1 (1.8 V) and the VCC2 (3.3 V) currents.
2. Connect the signal generator to the input of the ADL5725-EVALZ.
3. Connect RFOP and RFON to a 180° hybrid that works within the 17.7 GHz to 19.7 GHz frequency range.
4. Connect the difference output of the hybrid to the spectrum analyzer. The sum port of hybrid must be terminated to 50 Ω.

See Figure 19 for the ADL5725-EVALZ lab bench setup.

RESULTS

Figure 18 shows the expected results when testing the ADL5725-EVALZ using the Rev. A version of the evaluation board and its software. Note that future iterations of the software may produce different results. See the ADL5725 product page for the most recent software version.

Figure 18 shows the results of the differential output for an input of 17.7 GHz at −15 dBm. The hybrid and board loss were not deembedded.

BASIC CONNECTIONS FOR OPERATION

Figure 20 shows the basic connections for operating the ADL5725 as it is implemented on the evaluation board of the device.

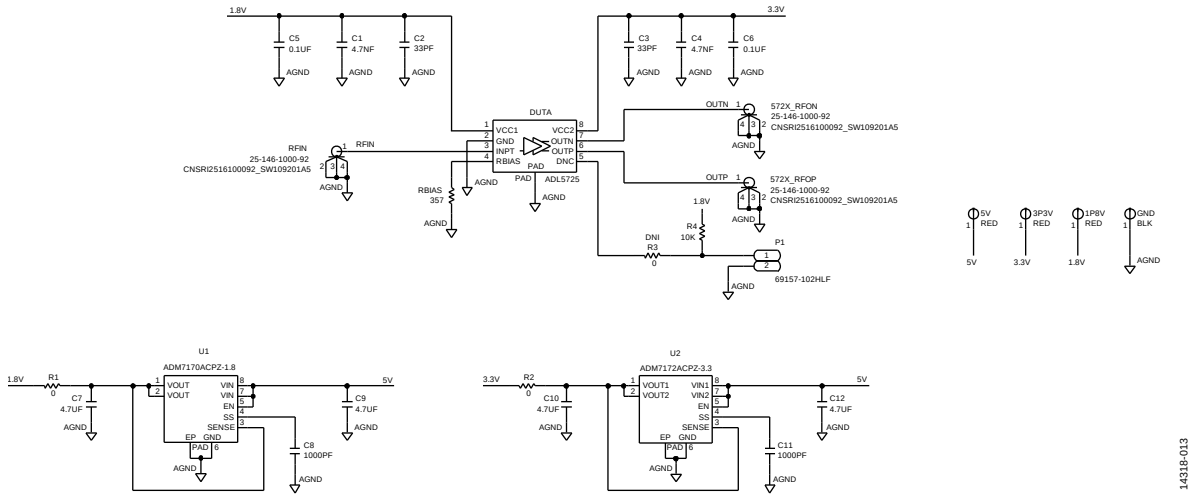

Figure 20. Evaluation Board Schematic

Table 6. Evaluation Board Configuration Options

Component	Function	Default Condition
3P3V, 1P8V, GND, 5V	Power supplies and ground.	Not applicable
RFIN, 572X_RFOP, 572x_RFON	Input, output, and data.	Not applicable
RBIAS	357 Ω for RBIAS.	RBIAS = 357 Ω (0402)
R1, R2	1.8 V and 3.3 V regulator connections.	R1, R2 = 0 Ω (0402)
R3	Do not install (DNI).	R3 = DNI (0402)
R4	Pull-up or pull-down resistor.	R4 = 10 kΩ (0402)
C1 to C12	The capacitors provide the required decoupling for the supply related pins.	C1,C4 = 4.7 nF (0402), C2, C3 = 33 pF (0402), C5, C6 = 0.1 µF (0402), C7, C9, C10, C12 = 4.7 µF (0603), C8, C11 = 1000 pF (0603)
P1	Jumper to change bands, 2-pin jumper.	Not applicable
U1	ADM7170ACPZ-1.8 1.8 V regulator.	Not applicable
U2	ADM7172ACPZ-3.3 3.3 V regulator.	Not applicable
DUTA	ADL5725 device under test (DUT).	Not applicable
