

# MAX14586/MAX14590

## High-Current Overvoltage Protectors with Adjustable OVLO

### General Description

The MAX14586/MAX14590 overvoltage protection devices feature a low  $48\text{m}\Omega$  (typ) on-resistance ( $R_{\text{ON}}$ ) internal FET and protect low-voltage systems against voltage faults up to +36V. When the input voltage exceeds the overvoltage threshold, the internal FET is turned off to prevent damage to the protected components.

The overvoltage protection threshold can be adjusted with optional external resistors to any voltage between 4V and 20V. With the OVLO input set below the external OVLO select voltage, the devices automatically choose the internal accurate trip thresholds. The internal overvoltage thresholds (OVLO) are preset to 7V typical (MAX14586) or 15V typical (MAX14590). The devices are also protected against overcurrent events by an internal thermal shutdown.

The MAX14586/MAX14590 are offered in a small, 8-pin TDFN package with exposed pad and operate over the  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  extended temperature range.

### Applications

Smartphones  
Tablet PCs  
Mobile Internet Devices

### Benefits and Features

- ◆ **Protect High-Power Portable Devices**
  - ◇ Wide Operating Input Voltage Protection from +2.2V to +36V
  - ◇ 3A Continuous Current Capability
  - ◇ Integrated  $40\text{m}\Omega$  (typ) n-Channel MOSFET Switch
- ◆ **Flexible Overvoltage Protection Design**
  - ◇ Adjustable Overvoltage Protection Trip Level
  - ◇ Wide Adjustable OVLO Threshold Range from +4V to +20V
  - ◇ Preset Internal Accurate OVLO Thresholds:
    - 7V  $\pm 2.9\%$  (MAX14586)
    - 15V  $\pm 3.3\%$  (MAX14590)
- ◆ **Additional Protection Features Increase System Reliability**
  - ◇ Soft-Start to Minimize In-Rush Current
  - ◇ Internal 15ms Startup Debounce
  - ◇ Thermal-Shutdown Protection
- ◆ **Minimize PCB Area**
  - ◇ 8-Pin TDFN (2mm x 2mm) Package

Ordering Information appears at end of data sheet.

### Typical Application Circuit

**Note 1:** Continuous current limited by thermal design.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### PACKAGE THERMAL CHARACTERISTICS (Note 2)

TDFN

Junction-to-Ambient Thermal Resistance ( $\theta_{JA}$ ) .....83.9 $^{\circ}\text{C}/\text{W}$

Junction-to-Case Thermal Resistance ( $\theta_{JC}$ ) ..... 37 $^{\circ}\text{C}/\text{W}$

**Note 2:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

### ELECTRICAL CHARACTERISTICS\*

### Pin Configuration

### Pin Description

| PIN  | NAME | FUNCTION                                                                                                                                                                                                                                                                                           |
|------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1, 2 | IN   | Voltage Input. Bypass IN with a 1 $\mu$ F ceramic capacitor as close as possible to the device to obtain $\pm 15$ kV Human Body Model (HBM) ESD protection. Connect both IN pins together for proper operation. IN is protected to $\pm 2$ kV HBM when IN is not bypassed with a capacitor to GND. |
| 3    | OVLO | External OVLO Adjustment. Connect OVLO to GND when using the internal threshold. Connect a resistor-divider to OVLO to set a different OVLO threshold; this external resistor-divider is completely independent from the internal threshold.                                                       |
| 4, 5 | I.C. | Internally Connected. Connect I.C. to GND or leave I.C. unconnected.                                                                                                                                                                                                                               |
| 6    | GND  | Ground                                                                                                                                                                                                                                                                                             |
| 7, 8 | OUT  | Output Voltage. Output of internal switch. Connect both OUT pins together for proper operation.                                                                                                                                                                                                    |
| —    | EP   | Exposed Pad. Connect EP to ground. For enhanced thermal dissipation, connect EP to a copper area as large as possible. Do not use EP as the only ground connection.                                                                                                                                |

### Functional Diagram

# MAX14586/MAX14590

## High-Current Overvoltage Protectors with Adjustable OVLO

Figure 2a. Human Body ESD Test Model

Figure 2b. Human Body Current Waveform

### External OVLO Adjustment Functionality

If OVLO is connected to ground, the internal OVLO comparator uses the internally set OVLO value.

If an external resistor-divider is connected to OVLO and  $V_{OVLO}$  exceeds the OVLO select voltage ( $V_{OVLO\_SELECT}$ ), the internal OVLO comparator reads the IN fraction fixed by the external resistor-divider.

$R1 = 1M\Omega$  is a good starting value for minimum current consumption. Since  $V_{IN\_OVLO}$ ,  $V_{OVLO\_THRESH}$ , and  $R1$  are known,  $R2$  can be calculated from the following formula:

$$V_{IN\_OVLO} = V_{OVLO\_THRESH} \times \left[ 1 + \frac{R1}{R2} \right]$$

This external resistor-divider is completely independent from the internal resistor-divider.

### ESD Test Conditions

ESD performance depends on a number of conditions.

The devices are specified for  $\pm 15kV$  (HBM) typical ESD resistance on IN when IN is bypassed to ground with a  $1\mu F$  ceramic capacitor.

### Human Body Model ESD Protection

Figure 2a shows the HBM and Figure 2b shows the current waveform it generates when discharged into a low-impedance state. This model consists of a  $100pF$  capacitor charged to the ESD voltage of interest, which is then discharged into the device through a  $1.5k\Omega$  resistor.

### Ordering Information/Selector Guide

| PART          | PIN-PACKAGE | TOP MARK | OVLO (V) |
|---------------|-------------|----------|----------|
| MAX14586ETA+T | 8 TDFN-EP*  | BNJ      | 7        |
| MAX14590ETA+T | 8 TDFN-EP*  | BNK      | 15       |

**Note:** All devices are specified over the  $-40^{\circ}C$  to  $+85^{\circ}C$  operating temperature range.

+Denotes a lead(Pb)-free/RoHS-compliant package.

T = Tape and reel.

\*EP = Exposed pad.

### Chip Information

PROCESS: BiCMOS

### Package Information

For the latest package outline information and land patterns (footprints), go to [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | OUTLINE NO.             | LAND PATTERN NO.        |
|--------------|--------------|-------------------------|-------------------------|
| 8 TDFN-EP    | T822+2       | <a href="#">21-0168</a> | <a href="#">90-0065</a> |

# MAX14586/MAX14590

## High-Current Overvoltage Protectors with Adjustable OVLO

### *Revision History*

| REVISION<br>NUMBER | REVISION<br>DATE | DESCRIPTION     | PAGES<br>CHANGED |
|--------------------|------------------|-----------------|------------------|
| 0                  | 3/11             | Initial release | —                |

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
