LED Driver

EUCO ARENA SPORT 2.1KW Series

EUCO ARENA SPORT

Highlights & Features

- 3 independent output channels: 2100W – max 700W per channel
- Nominal input voltage: 220-400VAC
- Ultra high Efficiency (97.8%)
- Control method: DALI2/D4i and DMX-RDM
- Programmable output current range 700-2000 mA
- Output voltage range from 250-550Vdc per channel
- Very low peak-to-peak current ripple (typ.1%) for HDTV broadcasting
- DALI-2 and DMX-RDM configurable single channel or multi-channel (up to 3 x DT6 or 3 x DMX)
- High-accuracy integrated power metering
- Constant Light Output (CLO) function
- Autonomous dimming via Midnight Centric Timer
- Wide dimming range 0.1-100% or 0.4-100%
- Input surge protection: DM 10kV; CM 10kV
- IP66 & IK08 enclosure
- Max remote distance 200 meters

General Description

Delta EUCO ARENA SPORT 2K1 series with DALI 2 & D4i or RDM / DMX control functions are constant current non-isolated LED drivers. Compatible with wide input voltage range 220~400Vac from any system manufacturer for indoor and outdoor applications. With IP66 ingress protection and wide ambient operating temperature range from -40°C to +50°C, the driver can fulfill any harsh condition. The extremely low output current ripple makes the driver a typical application for outdoor stadium lighting.

Model Information

Model Number	Input Voltage Range	Rated Output Power	Output Current Channel	Control Interface
EUCO-2K1200GIA	220/400Vac(typical) 198~440Vac(range)	2100W	3	DALI 2 & D4i
EUCO-2K1200GDA		2100W	3	RDM/DMX

*Default setting is a single address. Optionally, user could be able to assign a dedicated address per each channel via GUI programming tool for both DALI2 and DMX models.

Auxiliary Power Supply Ratings / Characteristics[3]

Specification	Min.	Typ.	Max.	Conditions
Integrated 24V Auxiliary Power Supply				
Operating Voltage	21.6V	24.0V	26.4V	0.1W~6.0W, reference to "DA-".
High frequency ripple of operating voltage	-	-	1.0 V_{pp}	21.6V~26.4V, f_{ripple} > 10kHz
Voltage in no-load condition	-	-	30.0V	Output power < 0.1W
Average output power capability	-	3.0W	-	CC mode load: 4.0mA~125mA (0.1W~3W).
Pulsed output power capability	-	6.0W	-	Dynamic CC mode load: peak load = 250mA/2.2ms and avg load = 4.0mA~125mA/3.8ms.
Start-up time	-	-	0.6s	From AC power on to Vaux increases and reaches 21.6 V, Mains is applied at any phase angle.
Integrated DALI-2 Bus Power Supply				
DALI-2 Bus voltage	12V	-	22.5V	CC load: 0~50mA, DALI2 bus power supply is disabled by default, and it can be activated via GUI or DALI controller.
Over Current Protection	50mA	-	62.5mA	Auto recovery and no component damaged. Limits output current to 50~62.5mA when output is short-circuited.

Additional Dimming Features

Specification	EUCO-2K1200GIA	EUCO-2K1200GDA
Autonomous dimming middle of the night	3 different configurable dimming profiles over the night are available for users to select and set in GUI. Details refer to GUI manual.	
Constant lumen output(CLO)	CLO function is to compensate the ageing of the light source, and so to get constant Lumen Output over the lifetime of the product. It's available in GUI to set starting dimming level (for example 90%) and end of life of the product (for example 50,000hrs), so that the driver by counting its functioning hours can do a linear interpolation in between starting dimming level at t=0hrs, and go to 100% at t=end of life. Details refer to GUI manual.

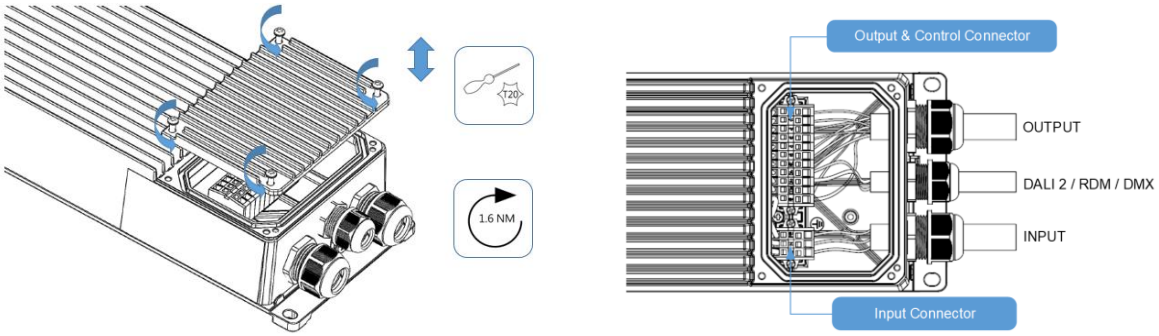
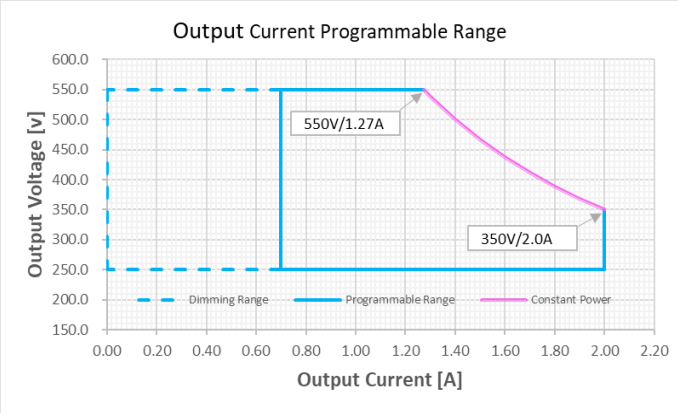
The Feature of Junction Box



Note: The cap and fastening 4 screws all have the function of anti-falling off.

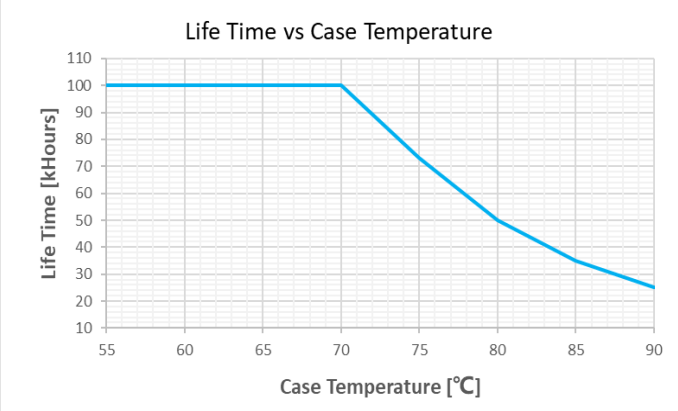
Appendix

1. Operating Range Curve



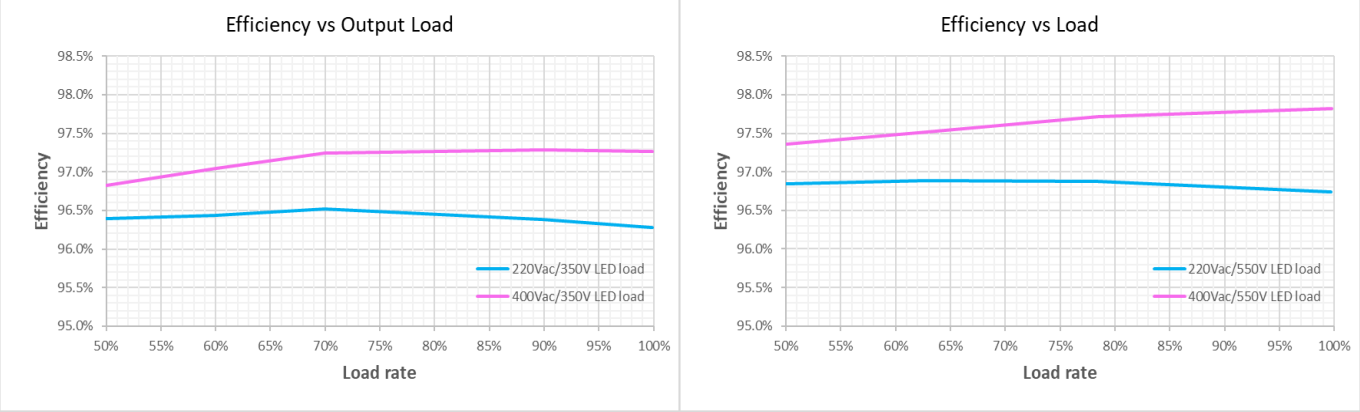
Note: EUCO ARENA SPORT 2K1 series can be programmed with wide output current through computer and programming tool. For more details, please refer to DALI programming User Manual or RDM/DMX programming User Manual.

2. Life Time versus Case Temperature Curve

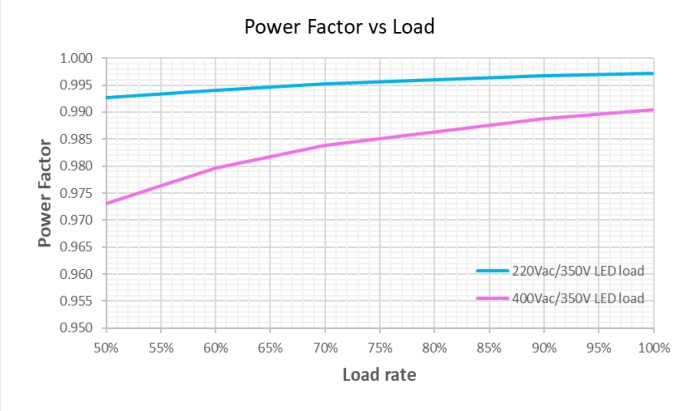


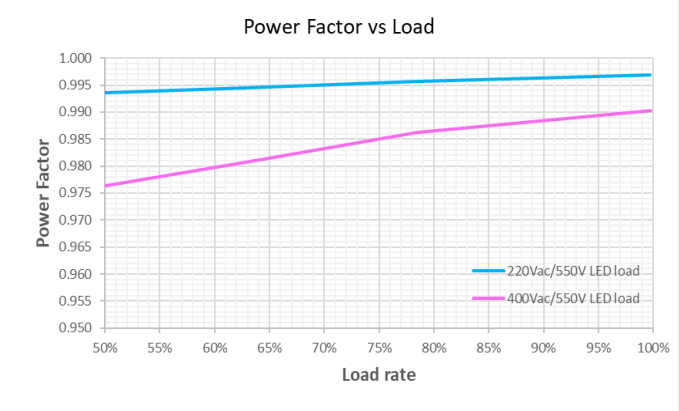
Note: Test at input voltage 220Vac & 400Vac, at full Load with each channel 2.0A/350V.

3. Efficiency versus Load

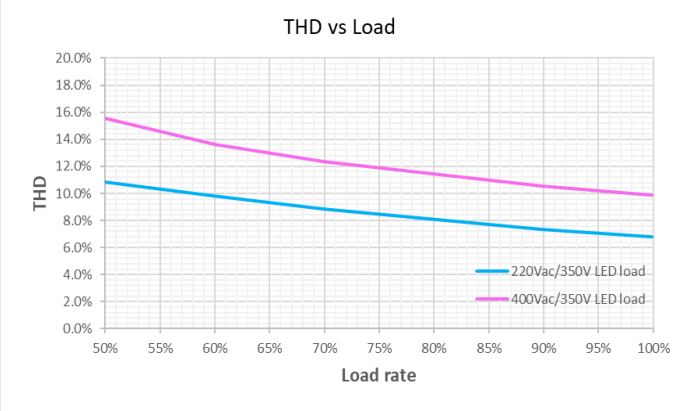


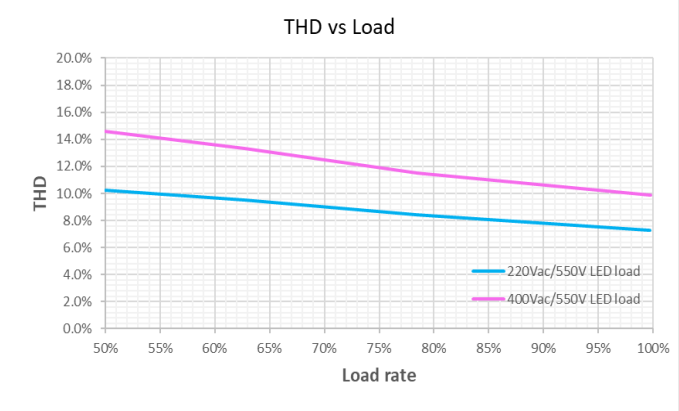
4. Power Factor versus Load





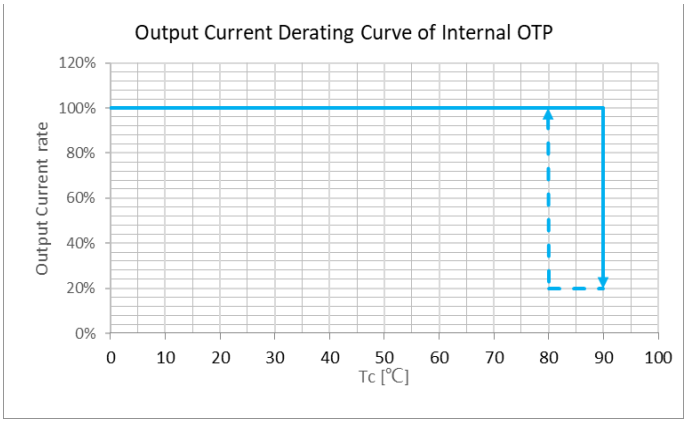
5. THD versus Load





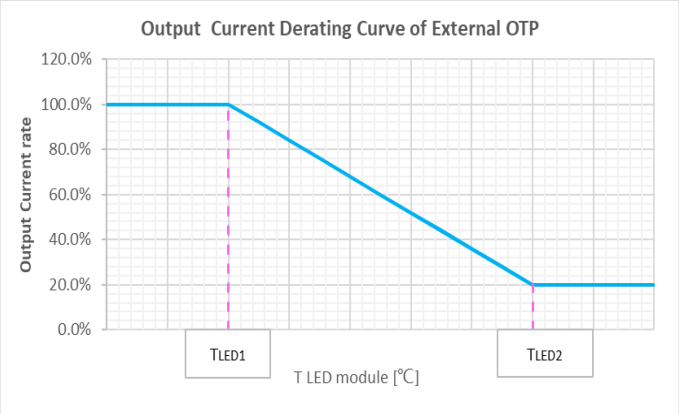
6. Internal Over Temperature Protection

This function ensures that the driver works under safe operating temperature condition. When the ambient temperature exceeds a fixed threshold (T_{c1} = 90°C typical), the output current of each channel will decrease to 20% automatically to reduce the internal temperature of the driver. The minimum output current ratio is 20% of the value before the internal OTP enabled. The output current will recover to 100% when the internal temperature is below recovery threshold (T_{c2} = 80°C typical).



7. Programmable External Over Temperature Protection

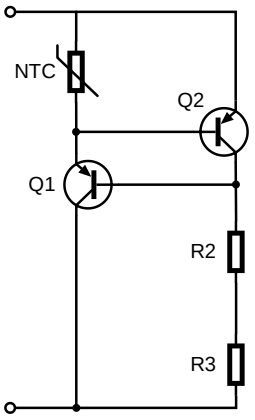
This protection is an optional feature and user can ignore it without connecting to NTC connector in the junction box. The driver monitors the temperature of the LED module through NTC terminal. The output current will be reduced smoothly and linearly at OTP status and return to normal when the fault condition is removed.



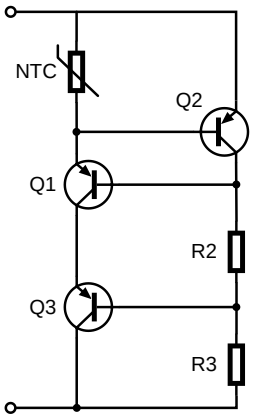
The trigger point of this protection can be set easily according to the actual conditions of the LED fixtures, the user can set the trigger point between 80°C and 110°C by the Delta programming tool, and the default value is 100°C. When the temperature exceeds the triggering point, the output current will decrease automatically to bring the temperature of the LED module back to safe value. More details about parameter setting please refer to DALI programming User Manual or RDM/DMX programming User Manual.

An external temperature sensing circuit is required to achieve the NTC terminal function to prevent the LED fixture from overheating.

The default setting is for a 33Kohm NTC, the circuits shown as both (a) and (b) below are acceptable.



(a)

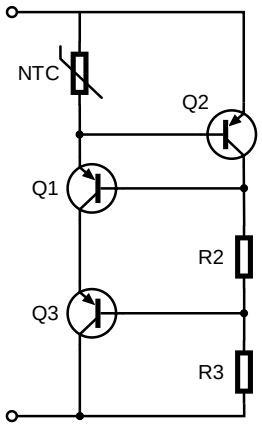


(b)

Parameter	Part	Manufacturer	Description
NTC	TSM1A333F3952RZA	THINKING	RES NTC 33Kohm F 3950K +/-1% SMD 0603 TP
R2 / R3	RC1206FR-07 5M1L	YAGEO	RES SMD 1/4W 5.1Mohm F 1206
Q1 / Q2 / Q3	PBHV9050T	NEXPERIA	-500V -250 mA PNP high-voltage low VCEsat transistor

Note: The circuits of above (a) and (b) have same OTP performance by using the same parts listed in the table, and to achieve good accuracy of OTP, Q2 should be placed close to NTC to make them have same temperature.

This product is also compatible with the circuitry for a 10Kohm NTC, this version could be selected and activated by “OTP on Fixture” section of GUI (Select “10K” in this section). The circuit and BOM table are shown as below.



Parameter	Part	Manufacturer	Description
NTC	B57371V2103H060	TDK	RES NTC 10Kohm F 4480K +/-3% SMD 0603 TP
R2/R3	RC1206FR-07 1ML	YAGEO	RES SMD 1/4W 1Mohm F 1206
Q1/Q2	PBHV9050T	NEXPERIA	500V 150 mA PNP high-voltage low VCEsat transistor

Note: The output voltage need to be over 300V to be effective by using this 10Kohm NTC version. And to achieve good accuracy of OTP, Q2 should be placed close to NTC to make them have same temperature.

8. Effect of Parasitic Capacitance in LED Fixture

The simplified structure of LED fixtures and leakage current effect are illustrated as following figures. As the driver is non-isolated between input and output, there could be an inevitable leakage current path through LED and equivalent parasitic capacitor C_p (C_{p1} and C_{p2}) to the PE (protective earth) in case that Heat Sink of the LED fixture grounds to the PE. This leakage current ip could impact on the output current ripple and the performance at low dimming level or dimming OFF. The equivalent C_p should be kept as low as possible for low leakage current and accordingly optimized performance of the driver.
