### PJT-40 W Series / PJT-□□V40WBA□

# **PJT**

### **Highlights & Features**

- Universal AC input voltage
- Standard industrial foot print of 2" x 3"
- Low leakage current < 0.1 mA
- Convection cooled operating temperature range from -10°C to +70°C
- High MTBF > 700,000 hrs as per Telcordia SR-332
- Multiple connector source options

### **Safety Standards**

CB Certified for worldwide use

**Model Number:** PJT-□□V40WBA□ **Unit Weight:** 0.08 kg (0.18 lb)

**Dimensions (L x W x H):** 76.2 x 50.8 x 22.9 mm [2" x 3"]

### **General Description**

The PJT open frame power supply series offers choices of 12 V, 15 V, 18 V and 24 V nominal output voltages. The single output products are designed with small standard industrial foot prints at 2" x 3". The highly efficient convection cooling designs enable optimum thermal management for high power efficiency. The PJT series of products can operate from -10°C to +70°C across the entire input voltage range of 90 to 264 Vac and are certified for safety standard according to IEC/EN/UL 62368-1 and for EMI standard according to EN/BS EN 55032, Class B.

### **Model Information**

### PJT Open Frame Power Supply

Model Number	Input Voltage Range	Rated Output Voltage	Rated Output Current
PJT-12V40WBA□	90-264 Vac	12 Vdc	3.33 A
PJT-15V40WBA□		15 Vdc	2.67 A
PJT-18V40WBA□		18 Vdc	2.22 A
PJT-24V40WBA□		24 Vdc	1.66 A

### **Engineering Data**

### Output Load De-rating VS Surrounding Air Temperature

Fig. 1 De-rating for Horizontal Mounting Orientation > 50°C de-rate power by 2.5% / °C

### Note

- Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.
- 2. If the output capacity is not reduced when the surrounding air temperature >50°C, the device will run into Over Temperature Protection. When activated, the output voltage will go into bouncing mode and will recover when the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition.
- Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!
- If the device has to be mounted in any other orientation, please contact info@deltapsu.com for more details.

### Output Load De-rating VS Input Voltage

- No output power de-rating for the input voltage from 90 Vac to 264 Vac
  - L Frame / Enclosed

# PJT-40 W Series / PJT-□□V40WBA□

### **Assembly & Installation**

Any excessive twisting or bending may damage the device's PCB. Please handle the device with care.

Use cable of AWG No. 22-18. Please refer to Table 1 for the recommended Mating Connector and Terminal.

Table 1	Input / Output	Power Supply Header	Mating Connector	Terminal
A – JST connector	Input	B2P3-VH (LF)(SN)	VHR-3N	SVH-21T-P1.1
	Output	B4P-VH (LF)(SN)	VHR-4N	SVH-21T-P1.1
B - Molex connector	Input	26-62-4030	09-50-3031	08-52-0071
	Output	26-60-4040	09-50-3041	08-52-0071
C – JWT connector	Input	A3963WV2-3P-D	A3963H02-3P	A3963TOP-2
	Output	A3963WV2-4P	A3963H02-4P	A3963TOP-2

### Safety Instructions

- If the device has to be mounted in any other orientation, please contact info@deltapsu.com for more details.
- The device is not recommended to be placed on surface with low thermal conductivity, such as plastics, for example.
- For safety reasons, please ensure the mounted device is kept at ≥ 4 mm (0.16 inch) safety distance at all sides from other components and equipments. Please insert an insulation sheet between the system and product, if the safety distance is less than 4mm. In addition, to ensure sufficient convection cooling, always maintain a distance of ≥ 20 mm (0.79 inch) from ventilated surfaces while the device is in operation.
- Note that the device can become very hot depending on the ambient temperature and load of the power supply. Do not touch the device while it is in operation or immediately after power is turned OFF. Risk of burning!
- Do not touch the terminals while power is being supplied. Risk of electric shock.
- Prevent any foreign metal, particles or conductors from entering the device through the openings during installation. It may cause: Electric shock; Safety Hazard; Fire; Product failure
- The power supply must be mounted by metal screws onto a grounded metal surface. It is highly recommended that the Earth terminal on the connector be connected to the grounded metal surface.

## PJT-40 W Series / PJT- UV40WBA U

#### **Functions**

### Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

#### Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

### Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

#### ■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

### **Inrush Current**

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

#### Dynamic Response

The power supply output voltage will remain within  $\pm 5\%$  of its steady state value, when subjected to a dynamic load from 0 to 100% of its rated current.

### PJT-40 W Series / PJT-□□V40WBA□

### Overload & Overcurrent Protections (Auto-Recovery)

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated when output current exceeds 140% of  $I_{\rm O}$  (Max load). In such occurrence, the  $V_{\rm O}$  will start to droop and once the power supply has reached its maximum power limit, the protection is activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition of the OLP and OCP is removed and  $I_{\rm O}$  is back within the specifications.

It is not recommended to prolong the duration of  $I_{\rm O}$  when it is <140% but >100%, since it may cause damage to the PSU.

### Short Circuit Protection (Auto-Recovery)

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

### Overvoltage Protection (Latch Mode)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 3 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

#### The power supply should be latch.

### Over Temperature Protection (Auto-Recovery)

As described in load de-rating section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at 100% load, the power supply will run into OTP when the operating temperature is beyond what is recommended in the de-rating graph. When activated, the output voltage will go into bouncing mode until the temperature drops to its normal operating temperature as recommended in the de-rating graph.
