- Notes:
- 1. Electrical specifications measured at 25°C
 - 2. Rated Current - The current when the coil temperature increases up to max. $\Delta T = 15^{\circ}\text{C}$ ($T_A = 20^{\circ}\text{C}$)
 - 3. Operating Temperature: -40°C to 125°C

PART NUMBER KEY

* Note: Inductance expressed by three figures. The unit is micro henry (nH). The first and second figures are significant digits, the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "N" (3N9 = 3.9 nH). In that case, all figures are significant digits.
