

PRM™ Regulator PRM2313S60E54H0T00

High-Efficiency Converter

Features & Benefits

- 48.0V input (38.0 – 60.0V), non-isolated ZVS buck-boost regulator
- 30.0 – 54.0V adjustable output range
- Single-ended remote sense
- 800W output power
- 97.7% typical efficiency at full load
- PRM2313 SM-ChiP package

Typical Applications

- DC Power Distribution
- High-Performance Computing Systems (HPC)

Product Ratings

Product Ratings	
$V_{IN} = 38.0 - 60.0V$	$P_{OUT} = 800W$
$V_{OUT} = 48.0V$ (30.0 – 54.0V Trim)	$I_{OUT} = 16.67A$

Product Description

The SM-ChiP™ ZVS Buck-Boost Regulator is a high-efficiency regulator integrating control, power FETs, magnetics and support components within a high density SM-ChiP package. By utilizing a Zero-Voltage Switching (ZVS) topology, the regulator is able to provide a high efficiency over the line and load range for a large step-down voltage range.

Minimal external components are required for operation, making this product ideal for driving high-efficiency non-isolated NBMs to power low-voltage rails to run low-power regulators, LDOs, as well as loads that require precise regulation such as hard drives or bias rails.

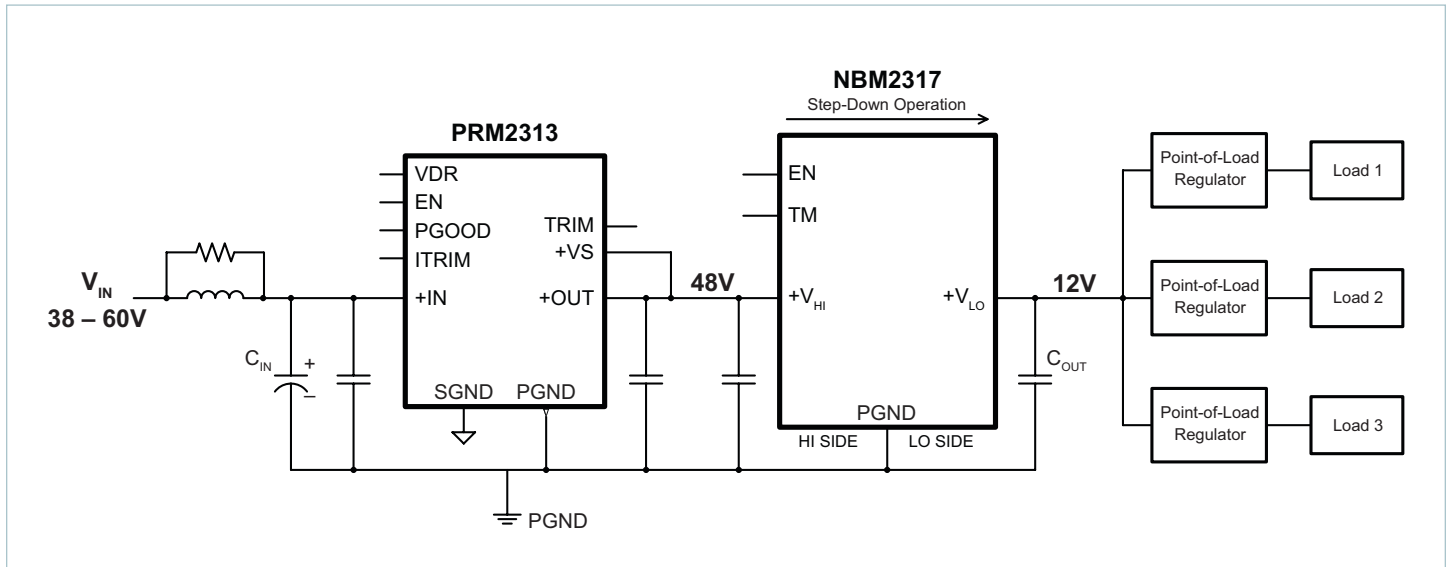

The SM-ChiP package is compatible with standard pick-and-place and surface-mount assembly processes. In the application, it provides superior thermal management with simple cooling methods.

Package Information

- 22.8 x 13.8 x 7.4mm SM-ChiP™
- Weight: 9.0g

Note: Product images may not highlight current product markings and cosmetic features.

Typical Application

Typical application: 48V to 12V regulator

Terminal Configuration

Terminal Descriptions

Terminal Number	Signal Name	Type	Function
1	SGND	Signal	Signal Ground: reference for control signals; internally connected to PGND
2	TRIM	Signal	Trim: output voltage trim adjust
3	EAO	Signal	Error Amplifier Output: load-share connection; EAOs are interconnected for parallel operation
4	+VS	Signal	Voltage Sense: positive voltage sense; connect to the PRM output
5	+OUT	Power	Positive Output: power terminal
6	VDR	Signal	Bias Supply Output: see Application Description for important considerations
7	PGOOD	Signal	Power Good: Open drain with internal pull-up; high when regulator is operating and V_{OUT} is in regulation, otherwise pulls low
8	EN	Signal	Enable: when input asserted active or left floating, regulator is enabled
9	SCL	Signal	Factory use only
10	SDA	Signal	Factory use only
11	+IN	Power	Positive Input: power terminal
12	ITRIM	Signal	Current Trim: current limit adjust input
13 ^[c]	PGND	Power	Power Ground: power return for +IN and +OUT current

^[c] Terminal 13 represents the package top and bottom conductive plating. Refer to product outline for additional details.

Part Ordering Information

Part Number	Temperature Grade	Option	Tray Size
PRM2313S60E54H0T00	T = -40 to 125°C	0 = 48.0V nominal output	66 parts per tray

Storage and Handling Information

Note: For compressive loading refer to [Application Note AN:036](#), "Recommendations for Maximum Compressive Force of Heat Sinks."
For handling and assembly processing, and for rework considerations refer to [Application Note AN:701](#), "SM-ChiP Reflow Soldering Recommendations."

Attribute	Comments	Specification
Storage Temperature Range		-40 to 125°C
Operating Internal Temperature Range (T _{INT})		-40 to 125°C
Weight		9.0g
Package Plating		ENiG: 100 – 300µm Ni, 2 – 5µm Au
MSL Rating		MSL 4, 245°C maximum reflow temperature
ESD Rating	Human Body Model ANSI/ESDA/JEDEC JS-001-2017	Class 1C (>1kV to 2kV) HBM
	Charged Device Model ANSI/ESDA/JEDEC JS-002-2014	Class 1C (>200 to 500V) CDM

Reliability and Agency Approvals

Attribute	Comments	Value	Unit
MTBF	Telcordia Issue 2, Method I Case 3, Gound Benign, Controlled	15.9	MHrs
	MIL-HDBK-217Plus Parts Count - 25°C Ground Benign, Stationary, Indoors / Computer Profile	6.84	
Agency Approvals/Standards	cTÜVus, UL 62368-1, CAN/CSA No. C22.2 62368-1, EN 62368-1		
	UKCA, electrical equipment (safety) regulations		
	CE Marked to the Low Voltage Directive and RoHS Recast Directive, as applicable		

Absolute Maximum Ratings

The ABSOLUTE MAXIMUM ratings below are stress ratings only. Operation at or beyond these maximum ratings can cause permanent damage to device. Electrical specifications do not apply when operating beyond rated operating conditions. Operating beyond rated operating conditions for an extended period of time may affect device reliability. Positive terminal currents represent current flowing out of the terminal.

Parameter	Comments	Min	Max	Unit
+IN to PGND	Continuous, non-operating	-0.3	75	V
+OUT to PGND	Continuous, non-operating	-0.3	60	V
VDR to SGND		-0.3	5.5	V
			+150 / -0	mA
PGOOD to SGND		-0.3	5.5	V
			±20	mA
EN to SGND		-0.3	5.5	V
SCL to SGND		-0.3	5.5	V
SDA to SGND		-0.3	5.5	V
TRIM to SGND		-0.3	5.5	V
ITRIM to SGND		-0.3	5.5	V
EAO to SGND		-0.3	5.5	V
+VS to SGND		-0.3	60	V
SGND			±0.5	A
Output Current			40	A

Electrical Specifications

Specifications apply over all line and load conditions, and trim from 30.0 to 54.0V, unless otherwise noted.

Boldface specifications apply over the temperature range of $-40^{\circ}\text{C} \leq T_{\text{INT}} \leq 125^{\circ}\text{C}$. All other specifications are at $T_{\text{INT}} = 25^{\circ}\text{C}$ unless otherwise noted.

Attribute	Symbol	Conditions / Notes	Min	Typ	Max	Unit
Power Input Specifications						
Input Voltage Range	V_{IN}	Continuous, operating	38.0	54.0	60.0	v
Input Voltage Slew Rate	dV_{IN}/dt	$0\text{V} \leq V_{\text{IN}} \leq 60.0\text{V}$	0.001		1000	V/ms
No-Load Power Dissipation	P_{NL}	Enabled, $V_{\text{IN}} = 54.0\text{V}$		0.24	0.400	W
Input Quiescent Current	I_{QC}	Disabled, $V_{\text{IN}} = 54.0\text{V}$		6.9	10	mA
Input Capacitance (Internal)	$C_{\text{IN_INT}}$	Effective value, $V_{\text{IN}} = 54.0\text{V}$		4.8		μF
Input Capacitance (Internal) ESR	$R_{\text{C-IN}}$	Effective value, $V_{\text{IN}} = 54.0\text{V}$		1.0		m Ω

Terminal Descriptions

VDR Bias Regulator

The VDR internal bias regulator is an internally-generated 5V supply, which is intended primarily to power the internal controller and driver circuitry. VDR can be loaded up to I_{VDR_ON} once the device has completed start up. During start up the load on VDR must be limited to I_{VDR_STDBY} .

+IN – Input Power

The +IN terminal is the power rail input to the PRM. External filtering and decoupling techniques are application-specific. Low-ESR ceramic capacitors are recommended at the input terminal to power ground.

EAO – Modulator

EAO is the error amplifier output and is used for current sharing when parts are operated in an array.

The error amplifier is a wide-bandwidth Transconductance Amplifier (TCA). Here it is important to note that the compensation components are pre-programmed by the factory and are internal to the device.

EN – Enable

The EN terminal of the regulator is referenced to SGND and permits the user to turn the regulator on or off. The EN polarity is a positive logic assertion.

If the EN terminal is left floating or asserted high, the regulator output is enabled. When EN is asserted low, the regulator will complete the current switching cycle and enter a low-power state until EN is released.

PGOOD – Power Good

The PGOOD terminal functions as a power-good indicator. PGOOD is high when the regulator is operating and V_{OUT} is within regulation; otherwise it pulls low.

ITRIM – Current Trim

ITRIM sets the constant current limit set point.

By default constant current limit is set outside of the device ratings and a resistor must be placed from ITRIM to SGND to bring the current limit set point within the permitted current limit range. The current limit set point must be set below the rated current of the device and above the pulse-skip threshold current if used.

+VS – Positive Voltage Sense

+VS is the positive voltage sense and connects the internal voltage sense divider to the desired voltage sense location. +VS is not internally connected and a connection must be made to the PRM output.

TRIM

TRIM is the internal error amplifier inverting terminal. The output voltage is set by internal resistors, but can be adjusted by external resistors connected to TRIM.

SCL, SDA

For factory use only.

SGND – Signal Ground

SGND provides an internal Kelvin connection to PGND. SGND must be used as the reference for all signal and control terminals.

PGND

PGND is the common power return.

Thermal Design

Thermal management of PRM internal power dissipation is critical to reliable operation, and ample cooling is preferred since efficiency and reliability are better at lower internal temperatures. Figure 29 shows a thermal impedance model that can estimate the maximum temperature of the highest temperature component for a given electrical and thermal operating condition.

The circuit model assumes each of those areas identified as thermal boundaries are isothermal although not necessarily the same temperature as the other boundary areas. Use of non-conductive TIM (Thermal Interface Material) is required to prevent shorting conductive surfaces on case.

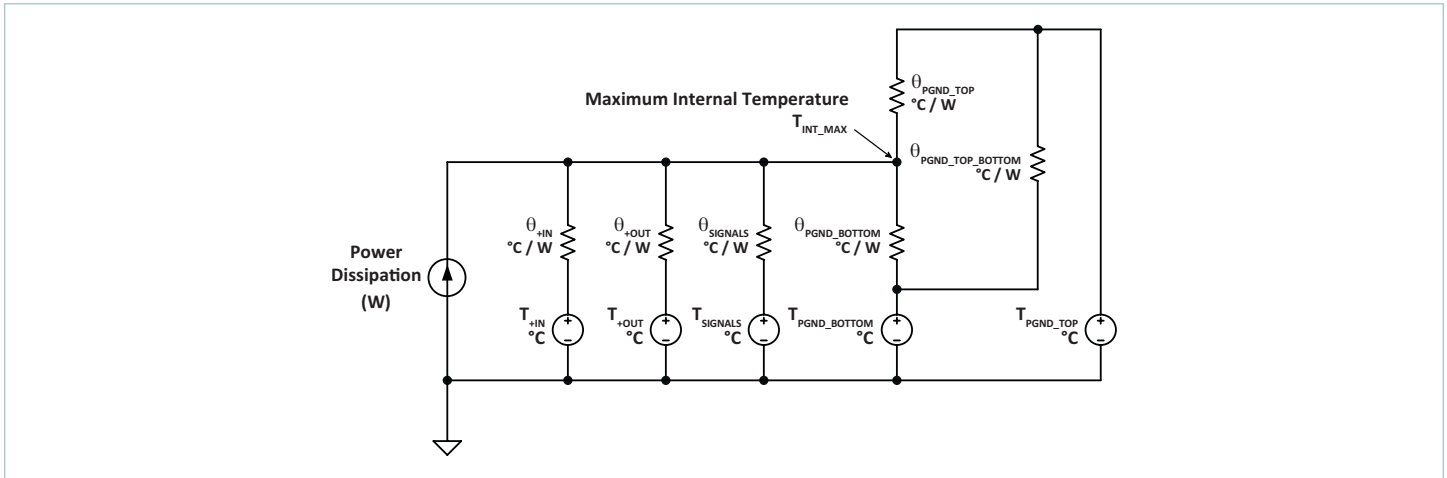

Figure 29 — Thermal model

Symbol	Thermal Impedance (°C / W)	Definition of Estimated Thermal Resistance
θ_{PGND_TOP}	3.6	from the hottest component inside the PRM to the top PGND terminal
θ_{+IN}	57	from the hottest component inside the PRM to the circuit board it is mounted on at the +IN terminal
θ_{+OUT}	61	from the hottest component inside the PRM to the circuit board it is mounted on at the +OUT terminal
$\theta_{SIGNALS}$	23	from the hottest component inside the PRM to the circuit board it is mounted on at the SIGNAL terminals
θ_{PGND_BOTTOM}	3.9	from the hottest component inside the PRM to the circuit board it is mounted on at the PGND THERMAL AND ELECTRICAL PAD
$\theta_{PGND_TOP_BOTTOM}$	17	between the top PGND terminal and the PGND THERMAL AND ELECTRICAL PAD

Vicor's Standard Terms and Conditions and Product Warranty

All sales are subject to Vicor's Standard Terms and Conditions of Sale, and Product Warranty which are available on Vicor's webpage (<https://www.vicorpower.com/termsconditionswarranty>) or upon request.

Life Support Policy

VICOR'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF VICOR CORPORATION. As used herein, life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness. Per Vicor Terms and Conditions of Sale, the user of Vicor products and components in life support applications assumes all risks of such use and indemnifies Vicor against all liability and damages.
