Telemecanique
Sensors

1 January, 2016

Hyde Park is now Telemecanique

Dear customer,

In 2006, we became part of Telemecanique. During these past few years, we have joined forces with the Telemecanique Sensors team to add the ultrasonic technology to their diverse portfolio of safety sensors, switches and other sensing technologies. Through this collaboration, we have found a huge interest, both internally and externally, in our two teams becoming one. Recently, we have taken the final steps to make that happen.

On January 1, 2016, we migrated to the Telemecanique brand. This transformation was the final step in our successful integration process. So what can you expect as a result?

- You can expect the same world-class sensors and customer service that you have always received from us. The changes will be branding-related only — such as a new name, a new logo, and new corporate colors — your current sensors and the people who support them will remain unchanged.
- The Telemecanique logo will appear instead of the Hyde Park logo on the product labels & packaging stickers of the sensors. The part numbers or references will remain the same. ‘Hyde Park’ will continue exist as a range name under the Telemecanique brand, which will be reflected in our product literature.
- In the future, we will be able to deliver various technologies of sensors other than the ultrasonic technology made possible through our synergies, collective strengths, and a stronger investment in R&D and innovation.

You may have more questions regarding this change. If you have specific questions, please let your Hyde Park representative know, and they will do their best to assist you.

While our brand has changed, the heart of our business and its focus remains the same: to help you meet your greatest challenges and provide you with the world-class customer support that you have always enjoyed from us. We hope you will like our new brand and the strength and opportunities it will provide you.

Thank you for your trust and confidence in us.

Sincerely,

Philippe Guitton
Senior Vice-President
Telemecanique Sensors

Table of Contents

Table of Contents, cont.

Hyde Park Range Overview

18 mm, 30 mm, and Dual-mount Ultrasonic Sensors

VIRTU™ VM Series Sensors

This new sensor features 18 mm* and 30 mm* barrel-type and dual-mount body styles, a first for ultrasonics. Ranges include 20 in and 39 in. versions, available in connector or cable styles. Small size makes it easy to mount them in many applications.

** 30mm not available in cable style*

12 mm and Flat-profile Ultrasonic Sensors

SUPERPROX® SM300 Series Sensors

The world's first ultrasonic proximity sensor to offer an extended sensing range up to 102 mm (4") enables detection of objects of any material in harsh environments. Models are available in either field programmable, or fixed field at the factory versions.

Switch Selectable Ultrasonic Sensors

SUPERPROX® SM500 Series Sensors

Easy push-button setup teach mode provides sensing ranges up to 2 meters, for use in the harshest environments. Models are available with or without alarms, no delay, dual-level, on/off delay, synchronized and gate-controlled, container motion, and analog output(with or without alarms). Both AC and DC models are available.

18 mm and Flat-profile Ultrasonic Sensors

SUPERPROX® SM600 Series Sensors

Mounting easily in limited spaces to detect objects as small as 0.127 mm diameter, these models have narrow beams and fast response. Available versions include small object, analog, and edge detection. Models include stainless steel and plastic housings, and a DeviceNet model is available in the SM600FP package. SC600 models provide field configurable features.

30 mm Ultrasonic Sensors

SUPERPROX® SM900 Series Sensors

As powerful as the larger SM500 series, with sensing ranges of 1, 2, and 8 meters these are available in factory-configured SM900 versions, or the SC900 field-configurable versions. Models include proximity with on/off output, dual-level, and analog output . A stainless steel-faced transducer or detection in severe, corrosive environments is available as well.

Hyde Park Range Overview, cont.

Configuration Package for Field Programming of SUPERPROX® Sensors

SUPERPROX+™

Combined with the Model AC441A configurator interface, it enables user to load either standard or custom sensing configurations into the SUPERPROX SC300, SC600, and SC900 sensor field-programmable series. Easy to use software can be operated in "virtual mode" to simulate changes to sensor operation before downloading into the sensor.

Ultrasonic Thru-beam Sensors

MICROSONIC® SM100 Series Sensors

Detect nearly any object and are compatible with most logic systems, and programmable controllers. No sensitivity adjustments are needed, and they are. available as a remote version for applications where space is an issue.

Ultrasonic Thru-beam Sensors

MICROSONIC® SM400 Series Sensors

Our smallest thru-beam series, available in 12 mm threaded barrel and flat-profile housings. Mount in limited space with sensing range up to 8 inches. Ideal for intricate edge and gap sensing applications and fast response option available.

Ultrasonic Thru-beam Sensors

MICROSONIC® SM800 Series Sensors

Mount in limited space and detect objects as small as 12.7 mm diameter with sensing ranges up to 40 inches. Small object version is available as well as a stainless steel and plastic housing version.

Python Power

AC/DC Power Supply/Output Converter

Accessory that allows a DC sensor to be installed where only AC power is available. Includes an in-line AC/DC power supply and an integral TRIAC switch.

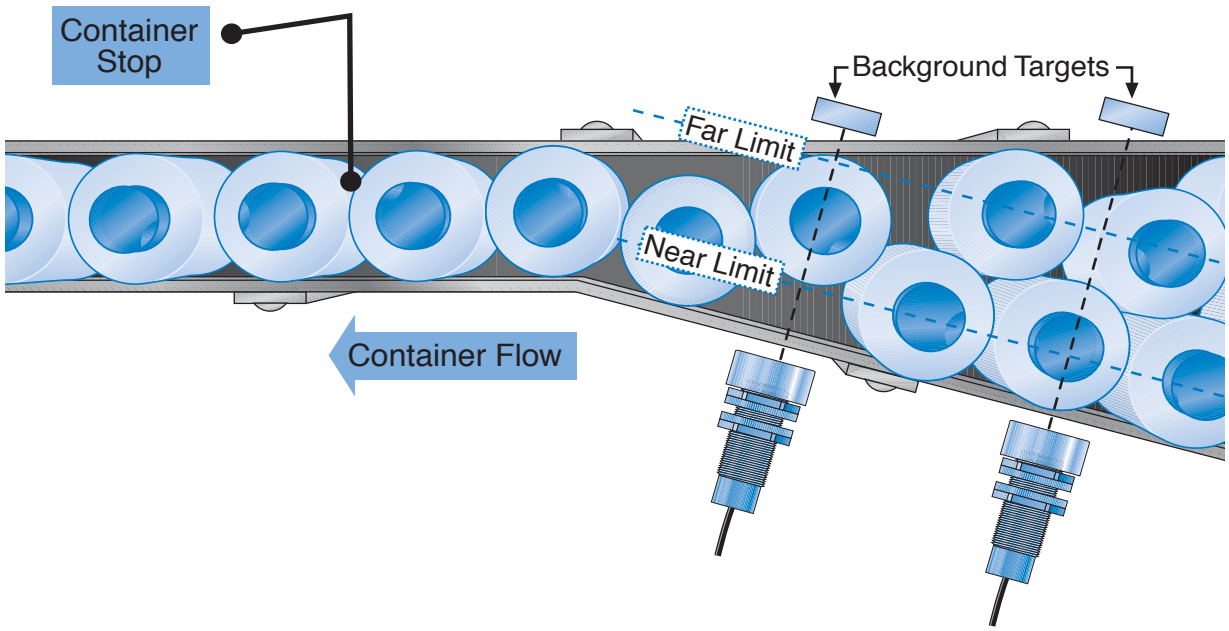
SUPERPROX® Model SM902A
Dual Level Latch Control Sensor



To Calculate:

Maximum container rate (MCR) on conveyor in containers per minute

Given: CP = container pitch (container-to-container spacing) in inches
RP = recommended sample pitch (distance resolution) in inches
SP = sampling period of sensor (cycle time) in seconds

Formula: $\frac{RP \times 60 \text{ seconds}}{CP \times SP}$ = MCR containers per minute

Example: CP = 4 inches
RP = 0.25 inch
SP = 0.003 seconds

Calculation: $\frac{0.25 \times 60 \text{ seconds}}{4 \times 0.003}$ = 1250 containers per minute

To Calculate:

Required sensor sample period (SP)

Given: CS = conveyor speed in inches per second
RP = recommended sample pitch (distance resolution) in inches

Formula: $\frac{RP}{CS}$ = SP seconds

Example: CS = 100 inches/sec.
RP = 0.25 inches

Calculation: $\frac{0.25}{100}$ = 0.0025 sec. (or 2.5ms)

To Calculate:

Sample pitch (SD) or distance between samples

Given: CS = conveyor speed in inches per second
SP = sensor sample period in seconds

Formula: CS x SP = SD inches

Example: CS = 100 inches/sec.
SP = .0005 seconds

Calculation: 100 x .0005 = .05 inches

To Calculate:

Window edge drift (WS) due to temperature change.
(SM600, SM607 only. SM606 is temperature compensated)

Given: The window edges will drift at the rate of 1.7% per 10°C
WE = window edge in question given as distance from sensor face in inches
TD = temperature shift in degrees Celsius

Formula: $\frac{0.017 \times TD \times WE}{10}$ = WS in inches

Example: WE = 2 inches
TD = 20°C

Calculation: $\frac{0.017 \times 20 \times 2}{10}$ = .068 inches

Note: The speed of sound increases as the temperature rises therefore the window edges will appear to move toward the sensor as the temperature increases.

To Calculate:

Object distance (D) from inner window edge using 0-10V analog sensor, indirect type.

Given: VOUT = output in volts
WW = window width in inches

Formula: $\frac{VOUT \times WW}{10}$ = D in inches

Example: VOUT = 3.3 volts
WW = 4.625 inches

Calculation: $\frac{3.3 \times 4.625}{10}$ = 1.526 inches from the inside window edge

To Calculate:

Object distance (D) from inner window edge using 4-20mA analog, indirect type sensor.

Given: IOUT = output in milli-Amps
WW = window width in inches

Formulas, con't

Formula: $\frac{(IOUT-4) \times WW}{16}$ = D in inches

Example: IOUT = 15mA
WW = 4.625 inches

Calculation: $\frac{(15-4) \times 4.625}{16}$ = 3.18 inches from the inside window edge

To Calculate:

Sonic beam diameter (D)*

Given: L = distance of sensor in inches
BS = beam spread in degrees

Formula: 2 x L x tan(BS/2) = D in inches

Example: L = 4 inches
BS = 7 degrees (SM600)

Calculation: 2 x 4 x tan(7/2) = 0.489 inch diameter

*NOTE: Since the beam spread in degrees changes with distance from the sensor, this calculation is approximate. For more accurate calculation, ask your distributor or Hyde Park for a beam plot.

To Calculate:

Minimum hole-size diameter (D) through which to detect*

Given: L = distance of hole from sensor in inches
BS = beam spread in degrees
S = safety factor

Formula: S x 2 x L x tan(BS/2) = D in inches

Example: L = 4 inches
BS = 7 degrees (SM600)
S = 1.2 (20% safety factor)

Calculation: 1.2 x 2 x 4 tan(7/2) = 0.587 inch diameter

*NOTE: Since the beam spread in degrees changes with distance from the sensor, this calculation is approximate. For more accurate calculation, ask your distributor or Hyde Park for a beam plot.

absorbent materials

Object materials that absorb some or all of the transmitted ultrasonic energy rather than reflect it back to the sensor. For example, granular products, foam rubber materials, and certain textiles and papers may need a stronger transmitted signal for reliable detection. Detection of foam surfaces from soaps and similar products is also difficult and should be tested prior to installation.

accuracy

In ultrasonic analog sensing specifications, the relationship between output magnitude and actual object position, expressed in terms of the span. Using the Model SM506 analog sensor with a 4 to 20 mA output as an example: If the sensor is set up with a 20" span between the near and far limit and the sensor's output current reads 12 mA, the object is expected to be 10" from the near limit. The accuracy specification indicates a possible maximum object position error of ±0.50% of the span, or 0.1" (0.005 x 20). This means the distance at 12 mA can vary between 9.9" and 10.1" in that span.

acoustic interference

An intense acoustical noise generated near the sensor which may interfere with the sensor's operation. Offending noise sources are usually well above the range of hearing. Common sources of this type of acoustical interference may be: air nozzles, machine vibration, and sliding friction. Another source of acoustic interference, known as "cross talk," can result when an ultrasonic sensor responds to the signal from an adjacent ultrasonic sensor. While this can be eliminated by repositioning the sensors, the Hyde Park Model SM504 sensors are designed to operate adjacent to other SM504 sensors without cross talk interference.

air movement and densities

See Sensing Considerations section on 2-21.

air pressure

See Sensing Considerations section on 2-21.

ALARMS push-button

A push-button on the alarm models of the Hyde Park Model SM500 family of sensors is used to set two discrete alarm set points (near/far, high/low) anywhere within the sensing range where alarm outputs are required to protect equipment from potential damage. The Model SM502 dual-level series and SM506 analog series have this push-button.

ALARM set point

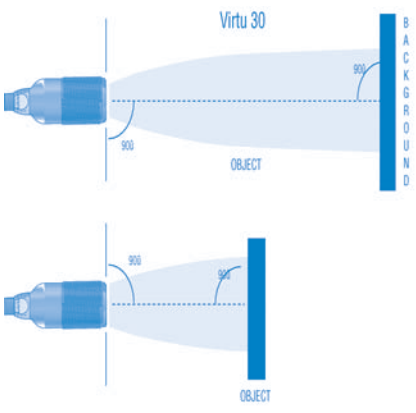
In using either the Hyde Park Model SM502/SM602/SM902 dual-level or SM506 analog series sensors, the point within the sensing range where an alarm output is generated by the unit.

alignment

The positioning of a sensor so that the maximum amount of the emitted sound energy reaches the receiving sensor. For pulse-echo types of sensors in object and background mode, the transmitted beam of the sensor should be perpendicular to the object or background target, respectively. For thru-beam types of sensors, alignment refers to the extent to which a line, perpendicular to the face of both transmitter and receiver, passes through the center of each face. In some situations, perfect alignment is not desirable and better results are obtained if the receiver is tilted about 10 degrees out of alignment.

alternating current (AC)

An electric current that periodically reverses direction of electron flow. The rate at which a full cycle occurs in a given unit of time (usually a second) is called the frequency of the current. A sinusoidal current rated at a given frequency, usually 50 Hz or 60 Hz.



ambient

The environmental conditions in and around the sensing area (e.g., humidity, light intensity, temperature, air speed).

ambient acoustical noise

See Sensing Considerations section 2-21.

ambient temperature

The temperature (in Celsius or Fahrenheit) of the environment in which the sensor is operating.

ampere (Amp)

A standard unit of current. It is defined as the amount of current that flows when one volt of emf (electromotive force) is applied across one Ohm of resistance. An Ampere of current is produced by one Coulomb of charge passing a point in one second.

analog

A representation of data by continuously variable quantities, e.g., voltage or current.

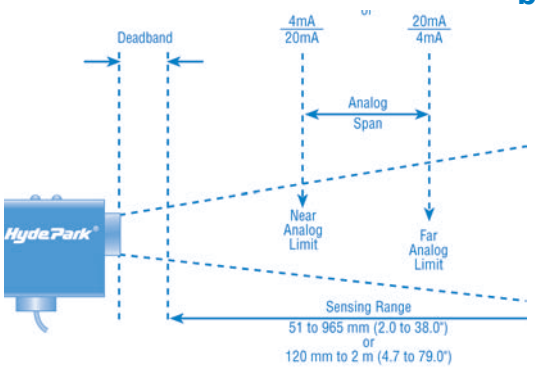
analog limits

In Hyde Park's analog sensors, the near and far boundaries that are set with the LIMITS push-button, within which the object detection and control take place. In the SUPERPROX® Model SM506 series, these limits are identified by the analog output selected: 0 to 10 VDC or 4-20 mA. The position of maximum output is determined by the configuration Switch 1 position. In the DIR position, the maximum analog output occurs at the limit (Near) closest to the sensor. In the INV position, the maximum analog output occurs at the limit (Far) farthest from the sensor.

analog response

The speed at which the continuously variable quantity (output voltage or current) follows the object position. Two methods are typically used to measure this: step response and frequency response. Step response is the time (typically in ms) required for the voltage or current to change

to a certain percent of the final value. Frequency response is another way to measure analog response. Imagine a SUPERPROX® analog sensor monitoring a rotating cam. As the cam rotates faster and faster, the unit becomes less accurate in its measurement. The frequency where the measured value of the difference between minimum and maximum is one-half the true difference is often used as a measure of frequency response. In Hyde Park's analog sensors, it is the change in analog output relative to the change in position of an object sensed within the near and far span limits of the Model SM506, SM606, SM906, and VM analog series.



attenuation

The lessening of sensing energy caused by environmental elements such as dirt, dust, moisture, or other contaminants in the sensing area. Attenuation is measured as a ratio or as the logarithm of a ratio (decibel).

background sensing mode

For Hyde Park's SUPERPROX® ultra-sonic sensors, this sensing mode is recommended when detecting objects with round or irregular shapes and non-perpendicular pro-files. The background mode, using a unique secondary echo lock-out function, enables the sensor, with a fixed, background target, to operate as a universal, all-materials-type, break-beam detector.

After setting the window limits on the fixed target (See Figure 1 below), make sure the ultrasonic transmission path between the sensor and the target is clear of obstructions.

Once set, the sensor accepts only the first (primary) ultrasonic pulse echo received from the target within the window limits as shown in Figures 1 and 2. In this mode, the echo is received and detected as an object not present. Object presence is detected when the object interrupts the sonic pulse transmission path between the sensor and the fixed target, as shown in Figures 2 , 4, and 5.

As a result of the secondary lock-out function, the sensor is permitted to receive only the primary echo after each sonic pulse. All subsequent secondary echoes are "locked out". If the first echo received from the object travels a lesser distance than the first echo from the fixed target window, that object is detected as being present.

As shown, if the echo off an object is not received (Object #1, Figure 4), or if the first echo is received off an object that is outside the window limits (Object #2, Figure 5). the object is detected as being present.

background suppression

An ultrasonic sensor's capability to disregard any or all pulse-echo returns from objects located outside or beyond where the far sensing window limit is set.

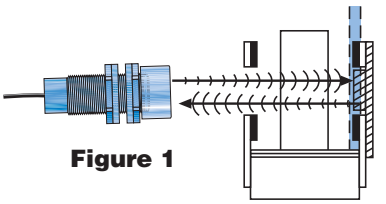


Figure 1

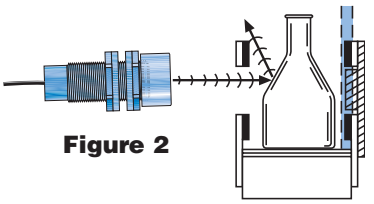

Figure 2

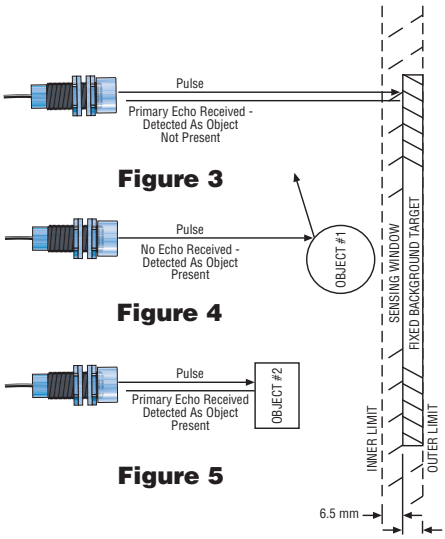

Figure 3

Figure 4

Figure 5

backup detection

An application in which the sensor is used to detect either the presence of objects (e.g., containers, that have accumulated at a particular point in the conveyor line) or when the movement of back-to-back containers is such that a backup condition is determined.

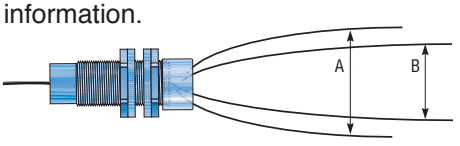
beam

Ultrasonic waves emitted from the sensor's transmitter. The waves diverge, approximating a cone shape until environmental attenuation "pinches off" the cone. The beam cone angle is included in the sensor's specification.

beam angle

The angle at which the pulses of sound energy expand from the transmitter, thus defining the cone of the sonic beam. Illustrated below are angle A of 20° for the Hyde Park Model SM900 2 meter range series and angle B of 10° for the SM500 1 meter range series.

The stated included angle of the Hyde Park sensors' sonic beams ranges from 7° to 20° depending upon the model and is only an approximation. The beam plot (below) of a particular sensor model provides more accurate information.



A = 20 degrees
B = 10 degrees

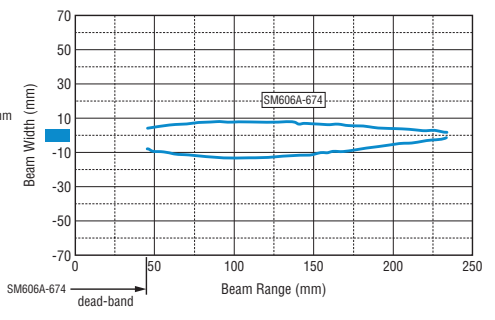
beam plot

Developed from data collected at 20° C and zero air flow, the points defining the boundaries and shape of the Hyde Park sonic beam. Shown above is the beam plot for the SM606 analog sensor. The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") object "target" positioned parallel to the sensor face. The plot is valid for targets equal to or larger than 10 cm x 10 cm. Points defining the boundaries of the plot are represented by the target edge closest to the beam axis. These and other plots are available from the SCC upon request.

break-beam sensing

See thru-beam sensing on 2-19.

SM606A SONIC BEAM BOUNDARY



"CE" mark

The CE mark on Hyde Park sensor products indicates a guarantee of conformity to entry requirements for products sold in the European market.

chemical compatibility

The capability of a sensor to avoid damage to its components caused by chemicals. Hyde Park's SUPERPROX®, MICROSONIC®, and VIRTU®, ultrasonic sensors will resist most chemicals including most food/beverage products. An optional fluorosilicone rubber face is available on some models to resist petroleum-based hydrocarbons and a variety of other chemicals.

coincidental secondary echo condition

This is a condition associated with using the Hyde Park ultrasonic proximity sensors in the object mode (Figure 1).

When an object is properly positioned between the sensor and the window (See Figures 2 and 3), the ultrasonic pulse from the sensor will reflect repeatedly between the sensor and the object, thus creating a series of secondary echoes. A coincidental secondary echo condition exists when the distance traveled by the primary echo of an object at or within the window limits is a multiple of (most likely twice) the distance traveled by a secondary echo off the foreground object. As shown in Figure 3, Object #3 is properly positioned halfway between the sensor and the inner window limit and is mistakenly detected as if it were Object #1. Exercise caution when considering a SUPERPROX® application to avoid this "false echo" condition.

common

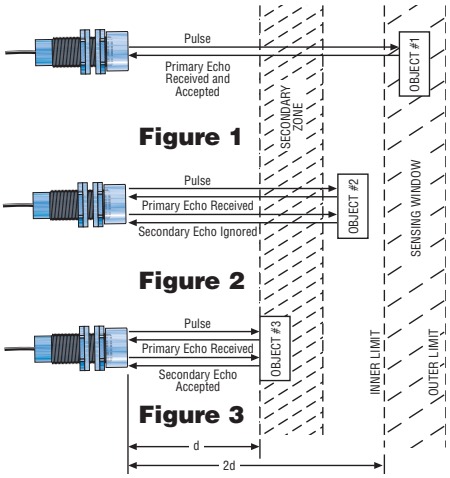
A circuit ground, the return path of charge to a power supply. Frequently, this point has the same potential (voltage) as a true earth ground, but this is not guaranteed.

cone diameter

The diameter of the sonic beam cross section at a specific distance out from the sensor and beyond the dead band.

configuration switches

A set of dip switches, located in the control compartment of the SM500 SUPERPROX® ultrasonic sensors, used to set up the sensor for its intended application. See the Product Information section.



connector

A device used to join or break two circuits quickly and easily when required. This Hyde Park sensor connection style provides a quick connect and disconnect service for the user.

continuous load current

The flow of charge from an output to an external unit.

continuous wave

The type of ultrasonic sensing used in Hyde Park's thru-beam sensors, MICROSONIC® , in which a separate transmitter generates ultrasonic energy continuously with very short interruptions of the transmitter beam easily detected by a separate and properly aligned receiver. See thru-beam (or break-beam) sensing on page 2-19.

control compartment

The area in the back of the SUPERPROX® Model SM500 family sensors, behind the square cover, that contains a variety of configuration switches, push-buttons, and a potentiometer used to set up the sensor for a given application. See Product Information section.

coupler

The silicone or glass epoxy material, which when attached to the piezoelectric crystal in the Hyde Park sensor, serves as the face of the sensor and is used to amplify the sound wave signal and "push" it through the air. This coupler provides a link that transports the sound energy or signal from the crystal to the outside air. This is necessary because air presents a resistance that would greatly inhibit the sensing range were it not for the boost provided by the coupler.

crosstalk

See acoustic interference on 2-11.

crystal

An electronic device made of quartz and having crystalline piezoelectric properties. In ultrasonic terminology, crystal refers to the piezo element, a ceramic made of lead, zirconium, and titanate which is used as part of the basic element of the transducer.

current consumption

Amount of flow required from the power supply by the unit in order to operate properly.

current loop or signal current loop (4-20 mA)

A type of analog sensor output that impresses a current across the connected load. The impressed current ranges from 4-20 mA. This type of output is less susceptible to electrical noise.

current pulse

A burst of electrical energy. A rapid increase in the flow of charge followed by a return to the original rate of flow.

current sinking output

See NPN current sinking output on 2-16.

current sourcing output

See PNP current sourcing output on 2-17.

cycle time

See response time on 2-18.

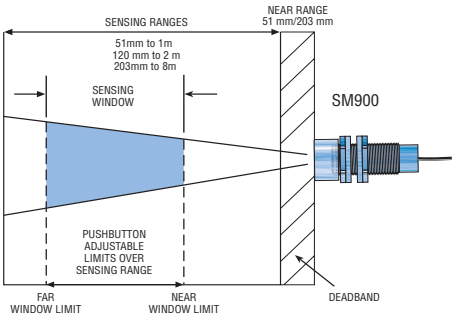
Dairy 3A Sanitary Standards

A set of voluntary standards formulated by joint government, supplier, and consumer effort to ensure that all dairy equipment can be thoroughly cleaned to prevent unsanitary conditions. Sensor housings, made of NORYL® plastic meet these standards for Hyde Park sensors and are available in gray to distinguish them from the standard blue ULTEM® housing.

deadband

The minimum allowable distance out from the sensor for reliable object detection. It is determined by a time period beginning when the transducer is energized, producing a sound wave, and when the resulting oscillations from that sound wave diminish to the point where it is possible for the transducer to accurately receive its echo. This space or "blind zone" in front of the sensor is not reli-

able for object detection. For Hyde Park ultrasonic sensors, the deadband can extend from 14 mm (0.75") to 203 mm (8") from the sensor, depending on the model selected.



delay on/off control

The output of a sensor may be delayed until a fixed time after the event occurred that triggered the output. Generally, the state of the sensor must stay constant or the timer will restart. Delay on refers to the time interval between when the sensor detects the object and when the output changes state. Delay off refers to the time interval between when the sensing ceases and when the output changes state.

DELAYS push-button

A push-button on the Model SM503 series sensors used to set on and off delay times.

DeviceNet Capability

Hyde Park's SM600FP flat-profile and SM900 sensors are available with a DeviceNet interface. DeviceNet is a 4-wire, which all draw their operating power from the bus. A master device, usually a PLC, coordinates communication activities on the bus: polling sensors and controlling actuators. The benefits of this type of interconnect scheme include: alpha-numeric-based information exchange between Hyde Park sensors and the DeviceNet network, universal sensor hardware for a multitude of applications, and improved error/fault reporting capability.

differential height inspection

A sensing application in which an array of Hyde Park Model SM504 series sensors are programmed to simultaneously detect various specific heights and produce an output when a specific height is not detected.

digital output

A discrete output that is always in one of two stable states.

diode

A two-layer semiconductor that allows current to flow in only one direction - from anode to cathode.

dip switch

One or more switches housed in a "dual in-line package" and soldered into a circuit board, thus providing a small and economical switch. In Hyde Park ultrasonic sensors, these are tiny switches in the control compartment of the Model SM5XX series sensors used to configure the sensor for a given application. See Product Information section.

direct current (DC)

Electrical current in which electrons flow in one direction only. It may be constant or pulsating as long as its movement is in the same direction.

direct/inverse output

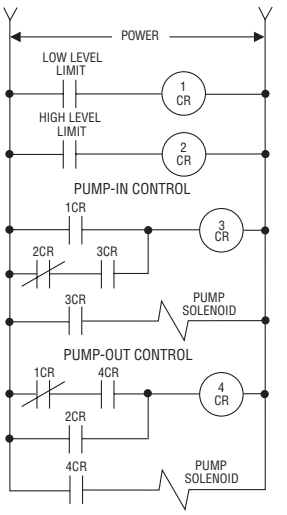
Refers to the polarity of the analog out-put. "Direct" output means that the voltage or current decreases as an object moves away from the sensor. "Inverse" output means that the voltage or current increases as an object moves away from the sensor.

dual-level on/off latch

A logic function in which an input signal to the latch module causes the module's output to turn on. The output remains on until a signal is applied to a second input to reset the latch. The "latch" function is usually implemented in a hardware module or PLC software. The on-board microprocessor in the Model SM502/SM602/SM902, and VM Virtu series dual-level control sensor models performs a stand-alone on/off logic latch control with respect to a preset high and low limit switch point. This eliminates the need for any external control relay or programmable controller program logic to perform either a pump-in or a pump-out level control application. In the pump-in mode, the sensor output latches on when the level drops to the low level limit and latches off when the level rises to the high level limit. In the pump-out mode, the sensor output latches on when the level rises to the high level limit and latches off when the level drops to the low level limit. The preceding diagram illustrates the on/off relay latch control logic emulated by a dual-level control sensor.

dual-level sensing

One of several sensing techniques within the capabilities of Hyde Park ultrasonic sensors, where the user sets



two limits, a high level and a low level, within which the level of a product is to be controlled through a discrete on/off output. See information on the Model SM502/ SM602/SM902, and VM Virtu series sensors for a full explanation of the three versions available.

echo

The ultrasonic energy which reflects off an object and returns to the detector.

electrostatic

Refers to motionless electrical charges. Charges exert mechanical forces on each other which can be used to generate ultrasonic waves.

environmental compatibility

Hyde Park sensors are capable of operating in a variety of environments and conditions, including selected acids, bases, salts, hydrocarbons, oils, solvents and food products among others.

ESD (electrostatic discharge)

The sudden discharge of electrical charge. The charge is commonly built up as a result of sliding friction between dissimilar materials (shoes and carpet). The potentials may reach 50 kilovolts (kv) in dry environments. This phenomenon may cause destruction of electrical equipment that is not protected.

ETL safety label

The label which guarantees that advertised Hyde Park AC-powered sensors have been approved by a nationally recognized laboratory and they comply with federal law.

false echo

See Coincidental Secondary Echo Condition on 2-13.

far (low) limit

The boundary of the sensing "window" farthest from the Hyde Park sensor.

fixed sensing window (width)

A defined space in front of the sensor within which object detection takes place. The Hyde Park Model SM300/660 family of proximity sensors have fixed sensing window widths.

fluorosilicone rubber

An elastomer that is resistant to all food products and several chemicals, including many solvents and petroleum-based products found in industry. Many of Hyde Park's sensors use this material as an ultrasonic coupling material (see coupler on 2-13).

foreground suppression

An ultrasonic sensor's capability to disregard any or all pulse-echo returns from objects located between the sensor and where the near sensing window limit is set.

frequency

The number of times a periodic action occurs in a unit of time. The number of hertz (Hz, the unit of frequency, one cycle per second) that an electric current completes in one second.

frequency drift

A percent of deviation from a specific number of cycles per second (Hz) for a given sonic or ultrasonic waveform.

gain adjustment

Determines the degree of sensitivity for a sensor.

gain setting

The amount of amplification of the input signal. Several sensor models are capable of operating at high or low gain. Higher gain can overcome signal loss due to poor reflective surfaces, high environmental temperature, etc while low gain is used if stray echo or secondary echo problems occur.

gap detection

Sensing for either voids or spaces between containers on a conveyor line system. Upon sensing a gap, the sensor can be used to automatically start, stop, or modulate speed of associated in-line conveyors and machinery.

gate-controlled sensing

A unique feature of the Model SM504 series sensors in which they perform periodic sensing of multiple objects or locations. Depending on the application, one or more of these sensors is triggered with a switching device to prevent possible false sensor outputs due to changing foreground object conditions.

ground

Referring to earth ground, used as a return for electric currents and as an arbitrary zero of potential. It is important at high power levels mainly for safety reasons. It also refers to the electronic chassis or enclosure ground or to DC common (voltage reference to the negative side of a DC power supply).

hermetic seal

An air-tight seal. All Hyde Park sensors are hermetically sealed to withstand harsh environments.

hertz (Hz)

The international unit of frequency, equal to one cycle per second. Hyde Park sensors operate at a frequency of 75 kHz, 180 kHz, 200 kHz, 300 KHz and 500 kHz.

hysteresis

Means "to lag behind". An electronic design consideration for ultrasonic sensors such that the point at which the sonic echo is received by the sensor is different than the release point of the output. This differential prevents the output of a sensor from oscillating near switching points. It is also a function of the number of echoes that must come from either inside or outside the window to switch the sensor's output.

impedance

Measured in Ohms. This is the total opposition a circuit, cable, or component offers to alternating current (AC) at a given frequency. Impedance includes resistance, inductive reactance, and capacitive reactance.

input

The signal (voltage or current) applied to a circuit to cause the output of that circuit to change state. It includes the terminal, jack, or receptacle provided for reception of the input signal.

input voltage

The power source required by an electric or electronic device (e.g., a self-contained sensor) in order for the device to operate properly.

intrinsic safety

A design technique applied to electrical equipment (e.g., sensors and switches) and wiring for hazardous locations. The technique involves limiting electrical and thermal energy to a level below that required to ignite a specific hazardous atmosphere. Intrinsic safety design often eliminates the requirement for expensive and awkward explosion-proof enclosures.

IP rating

A rating system which defines the suitability of sensor and sensor system enclosures for various environments. Similar to NEMA ratings for enclosures. Hyde Park ultrasonic sensors are rated IP66 and IP67 and carry the following protection levels:

IP66 - dust tight, strong jets of water (hose down)

IP67 - dust tight, submersion in water for up to 30 minutes at 1m

isolated output (or input)

A type of input or output that floats electrically from its host circuit. This type of circuit may be used to break ground loops.

jam detection

Sensing for a backup of containers on a conveyor line system due to either down-stream container jams or machinery stop conditions. Upon sensing a jam, the sensor can be used to automatically alert an operator or stop associated up-stream conveyors and machinery until the jam is clear.

kHz

Kilohertz, 1000 Hertz

latch (latching logic)

See dual-level on/off latch on 2-14.

LED (light emitting diode)

A semiconductor device that emits incoherent light formed by the P-N junction. Light intensity is roughly proportional to electrical current flow. LED's are used in Hyde Park sensors to indicate power on, object in view, output status, etc.

limit adjustment resolution

The smallest allowed distance that a limit can be changed.

LIMITS push-button

A push-button in the SUPERPROX® family of sensors used to set the position of limits, within which the detection of objects and levels takes place.

linearity

The deviation from a best-fit straight line representing the slope of an analog output. Using the Model SM906 with 4 to 20 mA output as an example, the linearity is ± 0.10% of the span. If the span is 30", the linearity is a ± 0.03" deviation above or below the best-fit straight line representing the slope of the output.

linear output

Characteristic of analog ultrasonic sensors such as the SM506, SM606, SM906, and VM Virtu, the output has a "straight-line" relationship to the sensing distance between the near and far sensing limits.

line transients

Voltage or current fluctuations on power conductors or input/output conductors. The transients are usually caused by noisy electrical equipment such as frequency-modulated motor drives or electromechanical relays. The noise may be conducted into the wires or induced magnetically or capacitively.

load

A device through which current flows producing, a voltage drop across it.

load resistance

Resistance is the ratio of voltage to current flow, V/I, measured in Ohms. Load resistance is that resistance seen by current from an output. Most sensors have a limit on how small resistance can be, since small resistance leads to excessive current flow and possible damage. Sensors with a 4-20 mA output have a limit on how large the load resistance can be since the sensor may not have enough voltage to impress a current.

logic/actuation

The capability of the sensor to make decisions and control actuation. Hyde Park's Model SM500/600/900 and VM families of "smart" sensors have this capability.

loss of echo

Occurs when the sensor does not receive echoes from an object within its sensing range for more than one second. When this occurs, the sensor's output automatically holds, switches off, or goes to a predetermined state for that model. When the sensor again receives echoes from the object it will either switch or remain in the same state depending on where the echoes are received relative to the control limits. Some models allow one or several cycles to pass before indicating a loss of echo.

mA

Abbreviation for milliAmpere. 1/1000 of an Ampere.

microprocessor-based intelligence

Noteworthy advance in ultrasonic technology which has given ultrasonics such features as error compensation, power, amplification, and timing adjustments, and computer interface capability that open the door to new control applications. For Hyde Park ultrasonic "smart" sensors, it is the capability to "learn" their surroundings, ignore non-target objects in the sensing range, make decisions, and control actuation consistently, operation after operation.

MICROSONIC®

The registered trademark of the Hyde Park line of ultrasonic thru-beam sensors.

motion detection

Sensing for a slowdown or stopping of back-to-back containers on a conveyor line system due to either down-stream machinery slowdown or stop conditions. Upon sensing a slowdown or stop in motion, the sensor can be used to automatically alert an operator or stop associated up-stream conveyors and machinery until the back-to-back containers begin moving again.

multiplexing

A design in which an electronic control circuit interrogates each sensor of an array in sequence. Different functions share the same hardware, usually each function having exclusive use for a limited, but recurring time.

near (high) limit

The boundary of the sensing "window" nearest to the sensor.

NEMA (National Electrical Manufacturers Association) Enclosure Standards

A set of guidelines established by NEMA to determine levels of physical protection that an enclosure, like a sensor housing, needs for various environments. Such a surrounding case is constructed to provide a degree of protection to personnel against incidental contact with the enclosed equipment during specified environmental conditions.

A brief description of the NEMA enclosure standard types used in the manufacture of Hyde Park ultrasonic sensors follows:

NEMA 1 intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment.

NEMA 3 intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet, and external ice formation.

NEMA 4 intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose-directed water.

NEMA 4X intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water.

normally closed (N.C.)

For a relay output, this implies the two contacts are connected, with connection broken only when the "sensing event" occurs. Other outputs are similar: NPN output at ground floats when event occurs. PNP output at voltage floats when event occurs.

normally open (N.O.)

Similar to normally closed (N.C.) except "not" connected.

NORYL®

Optional to the user, the plastic material used in the housing (case) of Hyde Park sensors which has been approved for USDA-Dairy 3A Sanitary Standards. Hyde Park sensor housings made of NORYL® are gray to distinguish them from the blue ULTEM® housings.

NPN

A type of transistor which requires a positive power supply. NPN refers to the structure of a transistor, i.e., excess hole (P) "sandwiched" between two excess electron (N) materials. This transistor has the characteristic that current injected into the base (P) allows current flow from collector to emitter as long as the base voltage is about 1/2 V higher than the emitter. In practice, NPN outputs are used to connect loads to ground.

NPN current sinking output

The output of a DC device that switches ground (DC common) to a load. The load is connected between the output of the device and the positive side of the power supply. The switching component is usually an open collector NPN transistor, with its emitter tied to the negative side of the supply voltage.

object (target)

The material, liquid, solid, transparent, moving or static that is being detected by the sensor in a given application.

object sensing mode

One of two operational modes (the other is background) in which the

Model SM300, 500, 600, 900, and Virtu VM sensors operate as a universal, all-materials type proximity sensor. Sensing in this mode is done by first setting the window limits as shown in the illustration and ensuring that the object surface is properly positioned in-line and parallel with the sensor face. In this mode, the sensor accepts all ultrasonic pulse echoes received off objects that are either at or within the window limits shown in blue. All other echoes, excluding coincidental secondary echoes received off objects outside the window limits, are ignored.

object surface area versus distance to sensor

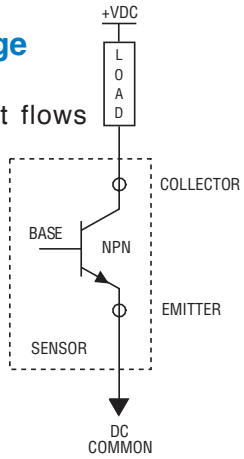
See Sensing Considerations section on 2-21

off-delay time

Refers to the time delay between when the sensor stops sensing an object and when the output state switches inactive. The Hyde Park SUPERPROX ®Model series sensors provide both on- and off-delays.

off-state leakage current

The current that flows even when an output is off. For most transistors, this is in the μA range and is negligible. But solid state AC relays can allow μA to flow which sometimes causes problems with PLC inputs.



on-delay time

Refers to the time delay between when the sensor starts sensing an object and when the output state switches active. The Hyde Park SUPERPROX Model series sensors provide both on-and-off time delays.

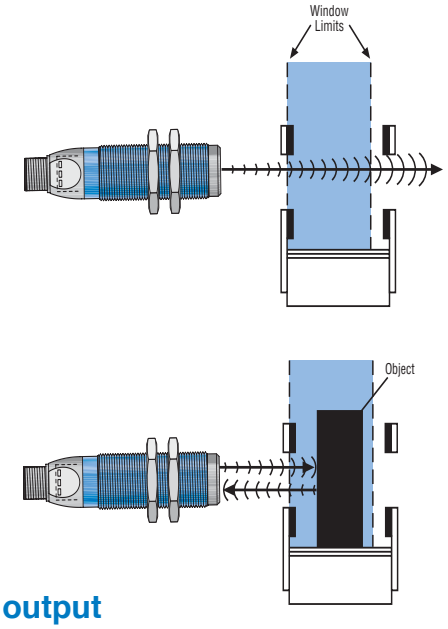
open collector

Open collector NPN describes a transistor output that sinks load current to common when the output is “on” (energized). When the output is “off”, no current flows. A pull-up resistor or other type of load is usually provided by the user.

Open collector PNP describes a transistor output that sources current from the sensor supply when the output is “on”. A pull-down resistor or other type of load is usually provided by the user.

oscillate

Change state in a regular, periodic fashion similar to, for example, a sine wave.



output

The useful power or signal delivered by a circuit or device.

output load range

The set of all values of impedance or resistance which can be connected to an output.

piezo

Literally, related to pressure. Used to refer to a material which exhibits the piezoelectric effect.

piezoelectric

The phenomenon of expansion along one axis when subjected to an electric field or production of an electric field when mechanically strained along an axis. Used to generate and sense ultrasound.

PNP

A type of transistor which sources current, PNP refers to the structure of a transistor, that is a thin layer of excess electron (N) semiconductor “sandwiched” between two layers of excess hole (P) semiconductor. This transistor has the characteristic that current injected into the base (N) allows current flow between the emitter and the collector (the two Players) as long as the base is about a 1/2 V lower than the emitter. In a sensor with a PNP output, this emitter is usually internally connected to the sensor power pin. In practice, PNP outputs are used to provide power to loads which are connected to ground. See the diagram under “PNP current sourcing output".

PNP current sourcing output

The output of a DC device that switches positive DC to a load. The load is connected between the output of the device and the ground (DC common) side of the power supply. The switching component is usually an open collector PNP transistor, with its emitter tied to the positive side of the supply voltage.

potentiometer

A variable resistor directly controlled by a dial, knob, or lever and used most commonly to produce a voltage proportional to a variable such as time delay, rate, etc. On the Hyde Park Model SM505 series motion sensor, the rate potentiometer sets the minimum threshold rate at which the sensor output switches either off or on, depending whether there is a decrease or an increase in the container motion rate. The "delay on" potentiometer on the same model series sets the minimum delay time before the output switches from off to on after container movement resumes at or above the setting of the rate potentiometer.

potting

Sealing by filling with a substance to exclude moisture. Hyde Park sensors are potted with an epoxy.

power/connection type

The second numerical digit in the Hyde Park sensor model number which indicates the AC or DC voltage range and the type of connection, connector, or cable style.

power consumption

The product of current and voltage(normally measured in watts) used by a device such as a Hyde Park sensor.

power supply

A device that provides the source of power (current and voltage). Regulated supplies are recommended for use with Hyde Park products.

proximity sensing

The technique used to determine whether an object has come close enough to a sensor to trigger an output. For Hyde Park sensors, it is the detection of object presence when the object is in front of the sensor and within the sensing range and sensing “window” of the sensor.

pull-up resistor

Load resistor connected between NPN open-collector (sinking) output and load voltage (usually supply voltage). This creates an output voltage. Lower values will help reduce electrical noise pick-up on the output cable.

pull-down resistor

Load resistor connected between PNP open-collector (sourcing) output and common. This creates an output voltage. Lower values will help reduce electrical noise pick-up on the output cable.

pulse

A current or voltage which changes abruptly from one value to another and then back to the original value in a finite length of time. It is used to describe one particular variation in a series of wave motions.

push-button configuration

The arrangement of push-buttons that are used to set up a Hyde Park ultrasonic sensor for a specific sensing application.

PVC

Polyvinyl Chloride, a popular plastic used extensively in sanitary plumbing, automotive, and household applications. Hyde Park's sensor cable is jacketed with PVC and meets FDA requirements for intermittent contact with food.

rate potentiometer

A potentiometer whose position is proportional to a speed. A sensor on a can line might trigger when the speed exceeds a certain value set by the rate potentiometer.

reflector angle

The angle between the reflective surface of a target and the beam-axis of the sensor. The optimum angle for sensor performance is 90°.

remote type sensor

A sensor where the small piezo elements are far from the sensor. Hyde Park sensors with the remote sensing heads are typically used in extremely tight areas where it is impossible to mount and use a regular style sensor.

repeatability

Describes the error in reporting the position of an object (or the position of a window edge) as the object is removed to another location and then returned to exactly the same location.

resistance

In DC circuits, the opposition a material offers to current flow, measured in Ohms. In AC circuits, it is the real component of impedance, and may be higher than the value measured at DC. (Note that "real" is used in the mathematical sense of "not imaginary.")

resolution

The smallest change capable by an analog output. Resolution may appear in a specification in several ways: as inches of a set span or, depending upon the type of output, in volts or current of an analog output level. This specification does not indicate accuracy.

response potentiometer

A potentiometer whose setting is proportional to the delay and filtering applied to an output.

response time (also called sensing rate or cycle time)

In ultrasonic sensing, the elapsed time between the transmission of a pulse and the pulse echo reception. The response times for Hyde Park ultrasonic sensors vary from 0.5 milliseconds for the Model SM600 series to 200 milliseconds for the Model SM500 series. The faster the response time, the greater the sensor's capability of detecting a quickly changing object position and the shorter the sensing range. The Model SM606 analog sensor, with a response time of 0.5 ms, samples at the rate of 2,000 times every second within a fixed window of 1.5 to 2 inches from the sensor.

retroreflective

Energy which contacts an object and is reflected back toward the source.

reverse polarity

Interchanging the connections, usually power connections, so that what was connected to the higher voltage is now connected to the lower voltage.

RS-232

An ANSI standard for serial communication which defines voltages, signals, and connections. The most common "standard," ilt is used on most personal computers and is simple to implement. A Hyde Park sensor with the RS-232 feature means that the sensor can communicate with a terminal, laptop, or desktop computer.

sensing limits

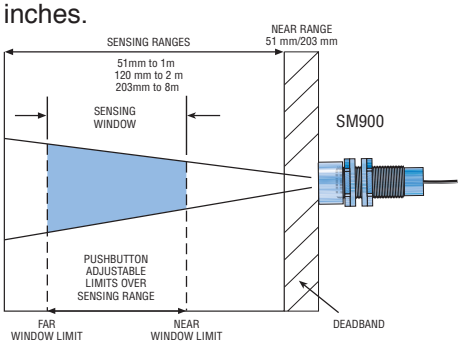
The boundaries, near and far, high level and low level, that define the sensing window. See "sensing window".

sensing mode

The arrangement of the Hyde Park sensors, through a simple dip switch, or microprocessor configuration to function or operate in a particular manner. (See object sensing mode on 2-16 and background sensing mode on 2-12.)

sensing range

The total possible sensing capability of the sensor, beginning after the dead-band, and extending out as far as the sensor is able to reach effectively. Hyde Park SUPERPROX® sensors have sensing ranges up to 315 inches. Hyde Park MICROSONIC® thru-beam sensors have sensing ranges up to 72 inches.



sensing window

The area of space in front of the sensor within which the object detection takes place. This space is defined two-dimensionally by two limits, near and far or high and low. Suitable objects that are present at or within these limits, and reflect sound energy back to the receiver, will cause the sensor's output to change (shortest and longest elapsed time for valid echo returns). Windows are fixed in standard SM300/600 sensors and adjustable in SM500/SM900, VM Virtu, and certain SM600 models.

sensor angle (with respect to a smooth, flat surface)

The angle created by the beam axis and its perpendicular, the latter represented by a smooth flat surface of an object. Hyde Park specifications call for this angle to be 90° ± 10°. If the flat-object surface is severely tilted away from the perpendicular of the beam axis, the echo is deflected away from the sensor, preventing the object from being detected.

sensor functionality

Refers to what the user wants the sensor to do. The five recognized functions are: presence/absence, positioning, inspection, condition measurement, or identification.

serial communications

A method of passing information sequentially, one bit at a time.

shape of the object

See Sensing Considerations section on 2-21.

shield

A conductive envelope around the primary conductors that provide an electronic barrier to electromagnetic interference. All Hyde Park sensors are shielded to limit the amount of RF energy emitted by the sensor, a requirement for CE approval. They are also shielded to prevent unwanted external noise from affecting sensor operation.

shielded cable

A cable that is protected against electrical and magnetic noise pickup. Cable may be shielded by a variety of methods and materials. Aluminum foil is most common but is less effective at lower frequencies than the braid-type of shield.

silicone rubber

An elastomer that is resistant to all food products and many chemicals found in industry. Many of Hyde Park's sensors use it as an ultrasonic coupling material (see "coupler" on 2-13). It's pliable yet damage-resistant nature makes it ideal for coupling ultrasonic energy to the air.

single file conveyor sensing mode

The setup configuration of a Hyde Park SUPERPROX® Model SM505/SM955 motion sensor to detect the movement of containers on single file conveyors.

sinking

Current flows into the connection. NPN transistors are usually current sinking outputs.

"smart" sensor

A sensor that uses the information or data it has detected and, through its microprocessor, actuates a specific outcome in a specific application setting. For example, Hyde Park's "smart" sensors use a discriminating microprocessor and push-button setup program to detect only the designated object within the sensing window while ignoring other foreground, lateral, and background objects. Another example is the Hyde Park dual-level sensor that detects the level at which a pump is to be turned on or off and outputs a signal causing the pump to turn either on or off. The same sensor can be configured to sound an alarm at a specific level.

sonic frequency

Frequency of the acoustic wave expressed in thousands of cycles-per-second (kHz). Generally, higher frequencies have higher attenuation rates in air. Ex:

SM900-8 m	75 kHz
SM100/700	180 kHz
SM500/900-1,2 m	200 kHz
VM Virtu	300 kHz
SM400/600/800	500 kHz

sourcing

Current flows out of the connection. PNP transistors are usually current sourcing outputs.

span

The distance between the set sensing limits (near and far) of a sensor with an analog output (e.g., Model SM506, SM606, SM906, and VM Virtu analog series.

step response

Refers to the time it takes a sensor output to respond to an instantaneous change in object position.

SUPERPROX®

The registered trademark of the Hyde Park line of ultrasonic proximity sensors.

Surface-to-beam angle

See Sensing Considerations section on 2-21.

surface reflection properties

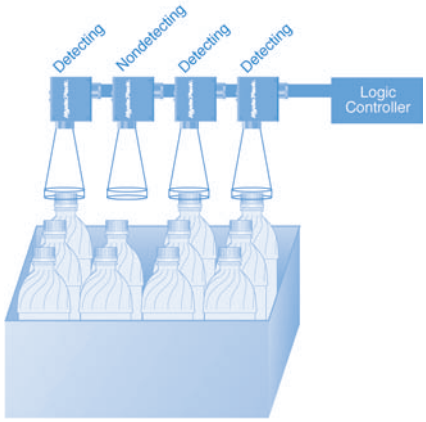
See Sensing Considerations section on 2-21.

switching rate

The frequency of a binary signal.

synchronized sensing

Coordinating the sampling time of one sensor to other events. It is frequently used with multiple sensors to eliminate interference occurring according to a common schedule. An example of synchronized sensing is the use of an array of SUPERPROX® Model SM504 series sensors to detect a full-case condition.



temperature

See Sensing Considerations section on 2-21.

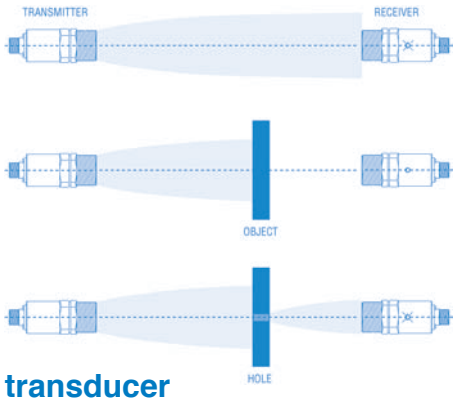
temperature dependence

A specification that indicates the amount of apparent position drift with respect to temperature drift. For example, if the span is set to 20" and the temperature drifts 8°C, then the sensor's output will drift and the apparent object position will shift by 0.0096" (0.006% of span/ °C or 0.00006 x 20" x 8). The Model SM5X6, SM6X6, 9X6, and VM Virtu analog sensor series have a temperature sensor embedded in the housing which compensates for changes in ambient temperature.

thru-beam (or break-beam) sensing

A sensing technique in which the object to be detected passes between an aligned transmitter and the receiver. The Hyde Park MICROSONIC® sensors, used in this technique, are defined as continuous-wave devices in which the transmitter emits a continuous ultrasonic beam which is picked up by the receiver. When an object passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches.

Also, when a hole allows the beam to pass through to the receiver, the output of the receiver switches.



transducer

A device used to convert one form of energy into another form of energy. The transducer in the Hyde Park SUPERPROX® sensors converts electrical energy into transmitted sound energy and then, through its receiver, converts the reflected sound energy (echo) into electrical energy. The MICROSONIC® sensor transmitters convert electrical energy into sound energy and the receivers convert sound energy into electrical energy.

TRIAC

A solid state device used to switch AC currents. The SM52X, SM57X, and PM100 Python have an AC switch output.

Turbulence

Motion of air which rapidly fluctuates in direction and velocity (with reference to sensing, the unstable condition of the air in and around the sensing application). This condition can cause dispersion and deflection of the transmitted sound energy. The maximum sensing range is reduced by the weakened or diverted energy due to this condition and thus should be tested prior to operation.

ULTEM®

A trademark for a high temperature, high strength plastic (polyetherimide) manufactured by the General Electric Company and used in the housings of Hyde Park ultrasonic sensors.

ultrasonic operating principle

Ultrasonic sensors have an acoustic transducer which is vibrating at ultrasonic frequencies. The pulses are emitted in a cone-shaped beam and aimed at a target object. Pulses reflected by the target to the sensor are detected as echoes. The device measures the time delay between each emitted and echo pulse to accurately determine the sensor-to- target distance. The Hyde Park SUPERPROX® sensor determines this distance by measuring the elapsed time between the transmission of a pulse and the pulse echo reception. The transmitted pulse begins a time clock; the first returned pulse echo stops the clock.

Given the elapsed time, the sensor software calculates the distance traveled by the pulse from the sensor to the object, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between transmission and reception of an energy pulse; and Vs = velocity of sound …. approximately 1100 feet per second. During operation, the calculated distance (D) between the sensor and the object is compared to the distance associated with the sensing window limits (see definition on 2-19). If D is at or within these limits, an output is generated. The output remains on until the echo either does not return or it returns from outside the window limits at which time it switches off.

ultrasonic sound

Pressure waves with a frequency that is above the range of human hearing, or above approximately 20,000 cycles per second (20 kHz). Ultrasonic technology uses electrical energy and a ceramic crystal (transducer) tuned to a specific frequency, to produce and to detect mechanical energy in the form of waves of energy. Hyde Park ultrasonic sensors use a piezoelectric-type crystal that is tuned to a specific, optimum frequency for the sensor model series:

- **75 kHz** for the Model SM900-8m series
- **180 kHz** for the Model SM100 / 700 series and Virtu VM30 / 80 series
- **200 kHz** for the Model SM500/900-1, 2 m series, and Model SM800 24-40" range thru-beam series
- **300 KHz** for VM1 and VM18 series
- **500 kHz** for the Model SM300 / SM600 proximity series and Model SM800 4-12 range thru-beam series

VAC

Voltage, alternating current

volt (v)

A unit of electrical pressure. One volt is the electrical pressure that will cause one Ampere of current to flow through one Ohm of resistance.

voltage

Electrical potential or electromotive force expressed in volts.

warranty

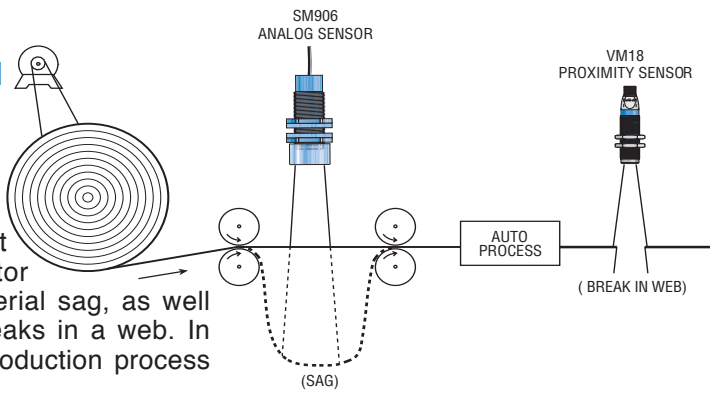
An assurance by the seller of property that the goods or property are as represented or will be as promised. See Hyde Park's Warranty information in the Warranty section of this catalog.

watt

A unit of electrical power. One watt is equivalent to the power represented by one Ampere of current with a pressure of one volt in a DC circuit.

Web break detection and material sag control

In this application, the manufacturer must constantly monitor and control material sag, as well as check for breaks in a web. In the automatic production process illustrated here, a machine draws material from the roll, processes it, then transfers it to the next stage. In the event of a process slowdown or machine jam, the material between the rollers will sag. Model SM506, 606, 906, and VM analog sensors with analog output detect the change in sheet-to-sensor distance and provide a linear and proportional output in mA or VDC. The output of the sensor instructs the variable speed drive controlling the feed roll to slow down. The SM500 proximity sensor monitors material as it exits the process, and detects breakage. When a break occurs, the process must stop and the roller be re-fed. By locating the sensor at the outlet side, a break can be stopped before the rollers downstream run themselves empty and have to be re-fed.



window

See sensing window on 2-18.

window-edge accuracy

Dimensional point of repeatability to detect an object at either near or far sensing window limit set points.

When considering a SUPER-PROX® sensor for a particular application, certain ultrasonic sensing fundamentals should be understood to ensure top performance.

Shape of the Object

Almost all object shapes can be sensed, provided enough reflected ultrasonic energy reaches the sensor. Smooth, flat objects, positioned perpendicular to the beam axis, are easier to detect than round objects. A cylindrical object can be detected at a greater distance than a spherical object with the same diameter. It is best to determine the sensing suitability of a given object under actual conditions.

Object Surface Area versus Distance to Sensor

The amount of ultrasonic energy reflected back to the sensor from the object depends largely on the object surface area and its distance from the sensor. If an object is positioned, for example, 200 mm (8") from the sensor, the received echo is approximately 4 times stronger than if the object is at 400 mm (16"). Thus, it is possible that the echo strength from an object with a small surface area, placed at the maximum sensing distance, may be too weak to detect.

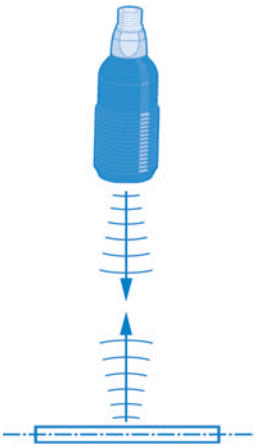
Surface Reflection Properties

Almost all materials reflect ultrasonic energy and can be detected. Ultrasonic energy, striking a flat, hard, smooth surface, perpendicular to the transmitted sonic beam, is the ideal condition for reliable detection.

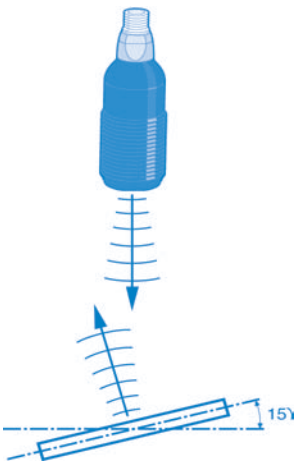
Conversely, materials with coarse, textured surfaces diffuse or absorb much of the transmitted energy. For example, granular products, foam rubber materials, and certain textiles and papers may need a stronger transmitted signal for reliable detection. Detection of foam surfaces from soaps and similar products is also difficult and should be tested prior to installation.

Surface-to-Beam Angle

If a smooth, flat-object surface is severely tilted away from the perpendicular of the beam axis, the echo is deflected away from the sensor, preventing the object from being detected.



Correct



Incorrect

Environmental Factors

The environment in which the sensing application takes place must also be considered.

Ambient Acoustical Noise

Intense acoustical noise generated near the sensor may interfere with its operation. Offending noise sources are usually well above the range of hearing. Common sources of this type of noise may be: air nozzles, machine vibration, and sliding friction.

Temperature

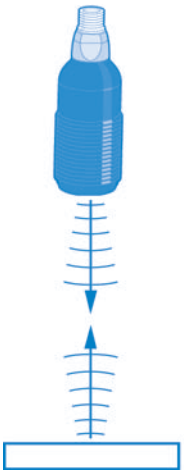
The velocity of sound in air is temperature dependent. The higher the temperature, the higher the velocity of sound. While the sensor is designed to compensate for gradual changes in temperature, acute ambient temperature changes can adversely affect the sensor's performance. This includes causing a sudden shift in the sensing window. If a hot object is to be detected, experiment by positioning the sensor so it is aimed at a cooler portion of the object. Also make sure the sensor is not sensing through hot air currents generated by the object as illustrated below.

Air Pressure

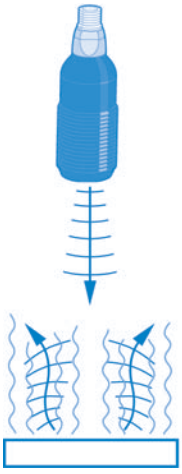
Ultrasonic sensors are not intended for use in differential pressure environments. Normal atmospheric pressure changes have no significant effect on the performance of the sensors.

Air Movement and Densities

Air currents, turbulence, and layers of different air densities can cause dispersion and deflection of the transmitted energy. The maximum sensing range is reduced by the weakened or diverted energy due to unstable air conditions.



Stable



Unstable
(May consider loss of echo feature or longer range sensor)

Object Sensing Mode

The object mode enables the SUPERPROX® sensor to operate as a universal, all materials-type, proximity detector.

Sensing in this mode is done by first setting the window limits as shown in Figure 1 and ensuring that the object surface is properly positioned in-line and parallel (See Figure 2) with the sensor face.

In this mode, the sensor accepts all ultrasonic pulse echoes received from objects that are either at or within the window limits as shown in Figures 2 and 3a. All echoes, excluding coincidental secondary echoes (explained below), received from objects outside the window limits (See Figure 3b) are ignored.

Coincidental Secondary Echo Condition

When an object is properly positioned between the sensor and the window (See Figures 3b and 3c), the ultrasonic pulse from the sensor will reflect repeatedly between the sensor and the object, thus creating a series of secondary echoes.

A coincidental secondary echo condition exists when the distance traveled by the primary echo from an object at or within the window limits is a multiple of (most likely twice) the distance traveled by a secondary echo from the foreground object. As shown in Figure 3c, object #3 is properly positioned halfway between the sensor and the inner window limit and is mistakenly detected as if it were object #1. Exercise caution when considering a SUPERPROX® application to avoid this condition.

Background Sensing Mode

This mode is recommended when detecting objects with round or irregular shapes and non-perpendicular profiles.

The background mode, using a unique secondary echo lock-out function, enables the SUPERPROX® sensor, with a fixed background target, to operate as a universal, all-materials-type, break-beam detector.

After setting the window limits on the fixed target (See Figure 4), make sure the ultrasonic transmission path between the sensor and the target is clear of obstructions.

Once set, the sensor accepts only the first (primary) ultrasonic pulse echo received from the target within the window limits as shown in Figures 4 and 6a. In this mode, the echo is received and detected as an object not present. Object presence is detected when the object interrupts the sonic pulse transmission path between the sensor and the fixed target, as shown in Figures 5, 6b, and 6c.

As a result of the secondary lock-out function, the sensor is permitted to receive only the primary echo after each sonic pulse. All subsequent secondary echoes are “locked out”.

If the first echo received from the object travels a lesser distance than the first echo from the fixed target window, that object is detected as being present.

As shown, if the echo of an object is not received (Figure 6b, object #1),or if the first echo is received from an object that is outside the window limits (Figure 6c, object #2), the object is detected as being present.

VIRTU™

Ultrasonic Proximity Sensors

- **Sensing range of 50.8 mm (2") up to 508 mm (20")**
- **Dual-mount flat-profile body style and 18 mm barrel**
- **Sinking (NPN) or sourcing (PNP) output available**
- **Rugged duty design for harsh enviroments**
- **Simple remote push-button accessory available for teaching of sensing limits**
- **NEMA 4X (indoor use only), IP67**
- **CE certified**

The next generation compact ultrasonic proximity sensor outperforming many other sensor types in both application and cost.

The new Virtu™ ultrasonic sensor developed by Hyde Park features sensing ranges from 50.8 mm (2") up to 508 mm (20"). This versatile, powerful proximity sensor mostly sells for under $100, a price breakthrough for superior ultrasonic technology.

Virtu's dual-mount body style, with its M18 x 1 threaded snout 0.89" long and a 1.49" rectangular body for a total length of only 2.38", and tough VALOX® housing make it not only ideal for many OEM applications but also an unfailing performer for an array of packaging applications, including food and beverage. Available in cable or connector style, Virtu is the first sonic compact sensor to offer a dual mounting feature. It operates on 12 to 24 VDC and provides either a sinking (NPN) or a sourcing (PNP) output. Virtu also has teach-in window capability, and no downtime is required for sensor recalibration when colors, materials, or shapes change.

With protection ratings of NEMA 4X (indoor use only) and IP67, this CE certified sensor is resistant to dust, 100% humidity, most acids and bases, and high pressure wash-downs that often leave water buildup on the sensing face. This sleek sensor is virtually impervious to the effects of splashing food, caustic cleaning solutions, and changing light conditions or colors. Shielding and filtering make the fully encapsulated sensor resistant to radiated or conducted energy.

Operation

The Virtu Model VM series is a self-contained, pulse-echo, proximity sensing device that both transmits and receives sonic energy within a 508 mm (20") maximum sensing range. Operating on 12 to 24 VDC, and employing the latest piezoelectric and microprocessor technology, Virtu sensors detect only those designated objects within a set “window” and ignore all surrounding sonic interference.

Prior to operation, a simple and easy “teach” function is used to set the sensing window limits through either a remote or in-line cable push-button. A near and far limit for a desired sensing window can be set anywhere within the sensing range and may be set to either encompass the full sensing range or be as small as 6 mm (0.25").

The sensor is equipped with a two-color status LED to show the state of the output. When the output is active, the LED is amber, regardless of whether the output is normally open or closed. When the output is not

active, the LED is green. The LED also serves to show the sensing status of the sensor.

With a normally open output and an object in the sensing window, the LED will be amber and switch to green when the object leaves the sensing window, switching off the output. With a normally closed output and an object in the sensing window, the LED will be green and switch to amber when the object leaves the sensing window, switching on the output.

Setting the Window Limits

Before operating the sensor, you should teach the sensor the sensing window. The sensing window is the distance between the near and far limits. To teach the limits, press and hold the push-button. The LED fast flashes amber and then after 3 seconds, the LED slowly flashes green indicating the sensor is in teach mode. Release the push-button, and the LED continues slowly flashing green indicating the sensor is waiting for the first limit. Place a target at either limit, and press and release the push-button. While the push-button is pressed with a target present, the LED turns amber indicating a valid echo is being detected. After the first limit is successfully taught, the LED slowly flashes amber indicating the sensor is waiting for the second limit. Place a target at the second limit, then press and release the push-button. While the push-button is pressed with a target present, the LED turns amber indicating a valid echo is being detected. After the second limit is successfully taught, the two limits are saved in non-volatile memory. The LED fast flashes green for 3 seconds to indicate the limits were successfully saved. The limits can be set in either order.

To teach the default window of 25.4 mm (1.0"), while the sensor is in teach mode requesting the first limit (LED slowly flashing green), place a target parallel to the sensor face at the center of the desired window. Press and release the push-button twice in succession within one second. The LED fast flashes green indicating the limits were successfully saved. This sets the limits 12.7 mm (0.5 in.) in front of and behind the front surface of the target.

If not using an optional push-button, the process is similar. The white teach wire (pin 2) can be grounded to the blue DC return wire (pin 3) to simulate the pushing of the button. All LED indications and the teach sequence are identical to the previously detailed process.

While setting either limit, if no echo is detected, the LED fast flashes green and amber indicating no object is detected. After 5 seconds, the sensor resumes operation with the old limits. If either limit is not set in 30 seconds, a limit time out occurs and the LED flashes green and amber for 3 seconds indicating the error. The sensor then resumes operating with the old limits.

How Does It Work?

During teach and operation, the Virtu sensor continually and accurately measures the elapsed time from the first pulse echo received after each pulse transmission. The transmitted pulse begins a time clock to register the elapsed time of the first received pulse echo. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula D=TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its first received echo; Vs = the velocity of sound, approximately 335 meters (1100 feet) per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances associated with the window limits. These limits are shown in the illustration as Dwi and Dwo. If D is within these limits, an output is activated or deactivated, depending whether normally open or normally closed. The output remains in such state until the echo does not return or it returns from outside the window limits.

Beam Plots

The following plots, developed from data collected at 20°C and zero air flow, define the boundaries and shape of the sonic beam for the Virtu series sensors.

The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. The plot for each sensor series is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis.

In each sensor series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin.

These and other plots are available from the SCC upon request.

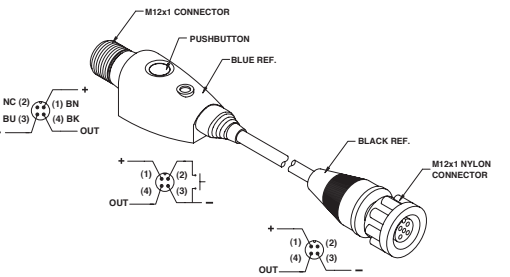
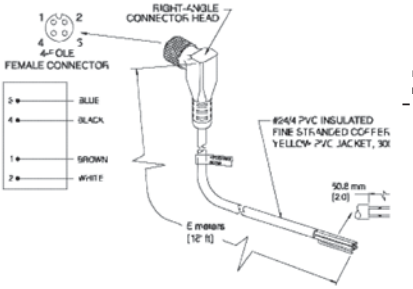
PB100 In-line accessory push-button for teaching window limits (for Virtu series sensors).





AC132 Right-angle, M12 micro, 4-conductor, connector/ cable assembly, 5 m (16') (for flat-profile connector-style sensors)

General Specifications

Sensing [T_A = 20° C (68° F)]

Sensing Range:
50 mm (2") to 508 mm (20") (large flat objects)
Sonic Frequency:
300 kHz
Minimum-size Detection:
2.5 mm (0.098") diameter rod or 1.0 mm (.039") bar at a distance of 200 mm (8")
Note: Smaller object may not be detected at closer distances
Maximum Angular Deviation:
± 5° on a 100 mm x 100 mm (4" x 4") flat target at a distance of 508 mm (20")
Sonic Cone Profile:
see beam plot on page 3-3
Limit Position Accuracy:
± 1.6 mm (0.062") max.
Repeatability:
± 0.7mm (0.027") or better

Power Requirements

Supply Voltage:
12VDC to 24VDC ± 10%, regulated supply
Current Consumption:
40 mA max. (excluding load)
Power Consumption:
1.0 W max. (excluding load)

Output

Sinking Output (NPN Model VM1-NXX):
Maximum on-state voltage:
0.75 V @ 100 mA
Maximum load current:
100 mA
Maximum applied voltage:
30 VDC
Sourcing Output (PNP Model VM1-PXX):
Maximum on-state voltage drop:
1.10 V@100mA
Maximum load current:
100mA
Output voltage:
V_{Supply} - 1.10 V @ 100mA

Input-Teach Setup

Contact Closure (push-button) to common.
Internal 115KW pull-up to 5V
Input Voltage Range
Setup Input Active 0V to 1V
Setup Input Inactive 2.5V to 5V
Max Voltage without Damage -30V to 30V

Response Time

15.0 ms on / 15.0 ms off max

Indicators

Green LED: Illuminated if output is off
Amber LED: Illuminated if output is on
Note: Green and Amber LEDs are never illuminated simultaneously

Connections

Cable style models:
24 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3m (10') long
Connector style models:
12 mm, circular 4-pole, male micro connector

Protection

Power Supply:
Current-limited over-voltage, ESD, reverse polarity
Output:
Current-limited over-voltage, ESD, reverse polarity
Input:
Current-limited over-voltage, ESD, reverse polarity

Environmental

Operating Temperature Range:
-30° to 70°C (-22° to 152°F)
Storage Temperature Range:
-40° to 85°C (-40° to 185°F)
Operating Humidity:
100% non-condensing
Protection Ratings:
NEMA 4X (indoor use only), IP67
Chemical Resistance:
Resists most acids and bases, including most food products

Agency Approvals

CE Mark: CE conformity is declared to:
EN60947:1998 (proximity sensors)
EN61010-1 (general safety)
EMC:FCC 47 CFR Part 15 Class A (USA)

VIRTU™

Ultrasonic Dual-Level Sensors

NEW

- **Sensing range of 50.8 mm (2") up to 508 mm (20")**
- **Dual-mount flat-profile body style and 18 mm barrel**
- **Pump-in/Pump-out Latch Capabilities**
- **Rugged duty design for harsh environments**
- **Simple remote push-button accessory available for teaching of sensing limits**
- **NEMA 4X (indoor use only), IP67**
- **CE certified**

The next generation of the Virtu ultrasonic sensor family stays true to being a low-cost application solution.

The newest edition of the Virtu™ ultrasonic sensor was developed by Hyde Park to feature pump-in/pump-out functionality.

Virtu's dual-mount body style, with its M18 x 1 threaded snout 0.89" long and a 1.49" rectangular body for a total length of only 2.38", and tough VALOX® housing make it not only ideal for many OEM applications but also an unfailing performer for an array of packaging applications, including food and beverage. Available in cable or connector style, Virtu is the first sonic compact sensor to offer a dual mounting feature. Iit operates on 12 to 24 VDC and provides either a sinking (NPN) or a sourcing (PNP) output. Virtu also has teach-in window capability, and no downtime is required for sensor re-calibration when colors, materials, or shapes change.

With protection ratings of NEMA 4X (indoor use only) and IP67, this CE certified sensor is resistant to dust, 100% humidity, most acids and bases, and high pressure wash downs that often leave water buildup on the sensing face. This sleek sensor is virtually impervious to the effects of splashing food, caustic cleaning solutions, and changing light conditions or colors. Shielding and filtering make the fully encapsulated sensor resistant to radiated or conducted energy.

Operation

The Dual Level VM series is a self-contained, pulse-echo, proximity sensing device that both transmits and receives sonic energy within a 508 mm (20") maximum sensing range. Operating on 12 to 24 VDC, and employing the latest piezoelectric and microprocessor technology, Virtu sensors detect only those designated objects within a set “window” and ignore all surrounding sonic interference.

Prior to operation, a simple and easy “teach” function is used to set the sensing window limits through either a remote or in-line cable push-button. A near and far limit for a desired sensing window can be set anywhere within the sensing range and may be set to either encompass the full sensing range or be as small as 6 mm (0.25").

When selecting by model number from several factory-programmed, dual-limit parameters (near limit and far limit), the sensor can be set up to perform an on/off latch control function.

The sensor is equipped with a two-color status LED to show the state of the output. When the output is active, the LED is amber, regardless of whether the output is normally open or closed. When the output is not active, the LED is green. The LED also serves to show the sensing status of the sensor. With a normally open output and an object in the sensing window, the LED will be amber and switch to green when the object leaves the sensing window, switching off the output. With a normally closed output and an object in the sensing window, the LED will be green and switch to amber when the object leaves the sensing window, switching on the output.

Setting the Window Limits

Before operating the sensor, you should teach the sensor the sensing window. The sensing window is the distance between the near and far limits. To teach the limits, press and hold the push-button. The LED fast flashes amber and then after holding the push-button for 3 seconds, the LED slowly flashes green indicating the sensor is in teach mode. Release the push-button, and the LED continues slowly flashing green indicating the sensor is waiting for the first limit. Place a target at either limit, and press and release the push-button. While the push-button is pressed with a target present, the LED turns amber indicating a valid echo is being detected. After teaching the sensor the first limit successfully, the LED slowly flashes amber indicating the sensor is waiting for the second limit. Place a target at the second limit, then press and release the push-button. While the push-button is pressed with a target present, the LED turns amber indicating a valid echo is being detected. After teaching the sensor the second limit, the two limits are saved in non-volatile memory. The LED fast flashes green for 3 seconds to indicate the limits were successfully saved. The limits can be set in either order.

To teach the default window of 25.4 mm (1.0"), while the sensor is in teach mode requesting the first limit (LED slowly flashing green), place a target parallel to the sensor face at the center of the desired window. Press and release the push-button twice in succession within one second. The LED fast flashes green indicating the limits were successfully saved. This sets the limits 12.7 mm (0.5 in.) in front of and behind the front surface of the target.

If not using an optional push-button, the process is similar. The white teach wire (pin 2) can be grounded to the blue DC return wire (pin 3) to simulate the pushing of the button. All LED indications and the teach sequence is identical to the previously detailed process.

While setting either limit, if no echo is detected, the LED fast flashes green and amber indicating no object is detected. After 5 seconds, the sensor resumes operation with the old limits. If either limit is not set in 30 seconds, a limit time out occurs, the LED flashes green and amber for 3 seconds indicating the error. The sensor then resumes operating with the old limits.

How Does It Work?

During teach and operation, the Virtu sensor continually and accurately measures the elapsed time from the first pulse echo received after each pulse transmission. The transmitted pulse begins a time clock to register the elapsed time of the first received pulse echo. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula D=TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its first received echo; Vs = the velocity of sound, approximately 335 meters (1100 feet) per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances associated with the window limits. These limits are shown in the illustration as Dwi and Dwo. If D is within these limits, an output is activated or deactivated, depending whether normally open or normally closed. The output remains in such state until the echo does not return or it returns from outside the window limits.

Level-Control Functions

The level-control output can be configured for one of different operating functions. Using the Model Reference Guide, the sensor can be selected to perform either a pump-in level-control function or pump-out level-control function.

Pump-in Level Control

When the level moves beyond the far limit, the sensor level control output switches state and latches, starting a pump-in process. The sensor level control output does not change state until the level moves back beyond the near limit to stop the pumping or filling process.

Pump-out Level Control

When the level moves beyond the far limit, the level control output switches state and latches, stopping a pump-out process. The sensor level control output does not change state until the level moves back beyond the near limit to restart the pump-out process.

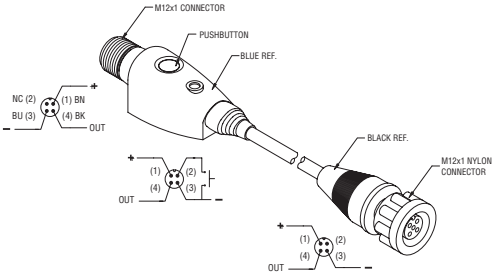
PB100 In-line accessory push-button for teaching window limits (for Virtu series sensors).



General Specifications

Sensing [T_A = 20° C (68° F)]

Sensing Range:
50 mm (2") to 508 mm (20")
(large flat objects)
Sonic Frequency: 300 kHz
Minimum-size Detection:
2.5 mm (0.098") diameter rod or 1.0 mm (.039") bar at a distance of 200 mm (8")
Note: Smaller object may not be detected at closer distances
Maximum Angular Deviation:
± 5° on a 100 mm x 100 mm (4" x 4") flat target at a distance of 508 mm (20")
Sonic Cone Profile:
see beam plot on page 3-3
Limit Position Accuracy:
± 1.6 mm (0.062") max.
Repeatability:
± 0.7mm (0.027") or better
Loss of Echo:
Echo Loss off after 200 cycles

Power Requirements

Supply Voltage:
12VDC to 24VDC ± 10%, regulated supply
Current Consumption:
40 mA max. (excluding load)
Power Consumption:
1.0 W max. (excluding load)

Output

Sinking Output (NPN Model VM1-NXX):
Maximum on-state voltage: 0.75 V @ 100 mA
Maximum load current: 100 mA
Maximum applied voltage: 30 VDC
Sourcing Output (PNP Model VM1-PXX):
Maximum on-state voltage drop: 1.10 V @ 100mA
Maximum load current: 100mA
Output voltage: V_{Supply} - 1.10 V @ 100mA

Input-Teach Setup

Contact Closure (push-button) to common. Internal 115KW pull-up to 5V
Input Voltage Range
Setup Input Active 0V to 1V
Setup Input Inactive 2.5V to 5V
Max Voltage without Damage -30V to 30V

Response Time

15.0 ms on/ 15.0 ms off max

Indicators

Green LED: Illuminated if output is off
Amber LED: Illuminated if output is on
Note: Green and Amber LEDs are never illuminated simultaneously

Connections

Cable style models:
24 AWG, foil shield, lead-free, PVC jacket
4-conductor, 3m (10') long
Connector style models:
12 mm, circular 4-pole, male micro connector

Protection

Power Supply: Current-limited over-voltage, ESD, reverse polarity
Output: Current-limited over-voltage, ESD, reverse polarity
Input: Current-limited over-voltage, ESD, reverse polarity

Environmental

Operating Temperature Range:
-30° to 70°C (-22° to 152°F)
Storage Temperature Range:
-40° to 85°C (-40° to 185°F)
Operating Humidity: 100% non-condensing
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products

Agency Approvals

CE Mark: CE conformity is declared to:
EN60947:1998 (proximity sensors)
EN61010-1 (general safety)
EMC:
FCC 47 CFR Part 15 Class A (USA)
EN5022:1994 / A2:1997 Class A ITE (EU)
VCCI Class A ITE (Japan)
ASNZS 3548:1995 / CISPR 22 Class A ITE (Australia)
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel (snout): 18 mm (0.709") x 1 mm-6g thread x
22.23 mm (0.875") long
Flat-profile: 43.74 mm (1.722") x
18 mm (0.709") x
59.69 mm (2.354")
Overall length: 59.69 mm (2.354")
Housing:
Shock and vibration resistant
Dual-mount style: VALOX®* plastic (FDA Approved)
18 mm barrel style: PBT
Transducer Face: Epoxy
Sensor Cable: PVC jacketed, black
LED: Polycarbonate

* VALOX® is a registered trademark of The General Electric Co.

Accessories

Model PB100, In-line push-button switch (for teaching window)

Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for micro-connector sensors

Model AC132, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for micro connector sensors

Model AC228, Right-angle bracket

See page 7-1 for accessory photos.

Temperature Compensation is enabled by default.
All possible sensor configurations are not listed here.

VIRTU™ Analog Ultrasonic Sensors

- **Auto Slope, direct and inverse output versions**
- **Sensing range of 50.8 mm (2") up to 508 mm (20")**
- **Dual-mount flat-profile and 18 mm barrel body styles**
- **Rugged duty design for harsh environments**
- **Simple remote push-button accessory available for teaching of sensing limits**
- **NEMA 4X (indoor use only), IP67**
- **CE certified**

The next generation of compact ultrasonic analog sensors that outperforms many other sensor types in all types of applications.

The new Virtu™ Analog ultrasonic sensor developed by Hyde Park features sensing ranges from 50.8 mm (2") up to 508 mm (20").

Virtu's dual-mount body style, with its M18 x 1 threaded snout 0.89" long and a 1.49" rectangular body for a total length of only 2.38", and tough VALOX® housing make it not only ideal for many OEM applications but also an unfailing performer for an array of packaging applications, including food and beverage. Available in cable or connector style, Virtu™ is the first sonic compact sensor to offer a dual mounting feature. It operates on 15 to 24 VDC. Virtu™ also has teach-in window capability, and no downtime is required for sensor re-calibration when colors, materials, or shapes change.

With protection ratings of 4X and IP67, this CE certified sensor is resistant to dust, 100% humidity, most acids and bases, and high pressure wash downs that often leave water buildup on the sensing face. This sleek sensor is virtually impervious to the effects of splashing food, caustic cleaning solutions, and changing light conditions or colors. Shielding and filtering make the fully encapsulated sensor resistant to radiated or conducted energy.

Operation

The Virtu™ Analog series is a self-contained, pulse-echo, analog sensing device that both transmits and receives sonic energy within a 508 mm (20") maximum sensing range. Operating on 15 to 24 VDC, and employing the latest piezoelectric and microprocessor technology, Virtu™ sensors detect only those designated objects within a set “window” and ignore all surrounding sonic interference.

Prior to operation, a simple and easy “teach” function is used to set the sensing window limits through either a remote or in-line cable push-button. A near and far limit for a desired sensing window can be set anywhere within the sensing range and may be set to either encompass the full sensing range or be as small as 6 mm (0.25").

The sensor is equipped with three LED's to show the sensing status. The amber LED is off when an object is within the sensing window. The amber LED is on when an object is being sensed within the range of the sensor. The orange LED indicates the relative value of the analog output and varies in intensity according to the output. The higher the cur-

rent or voltage output, the brighter the orange LED.

Setting the Window Limits

Before operating the sensor, you should teach the sensor the sensing window. The sensing window is the distance between the near and far limits. To teach the limits, press and hold the push-button. The amber LED fast flashes and then after holding the push-button for three seconds, the green LED slowly flashes indicating the sensor is in teach mode. Release the push-button, and the green LED continues slowly flashing indicating the sensor is waiting for the first limit. Place a target at the distance corresponding to the analog minimum (0 V or 4 mA), then press and release the push-button. While the push-button is pressed with a target present, the amber LED turns on indicating a valid echo is being detected. After the first limit is taught successfully, the amber LED slowly flashes indicating the sensor is waiting for the second limit. Place a target at the distance corresponding to the analog maximum (10 V or 20 mA), then press and release the push-button. While the push-button is pressed with a target present, the amber LED turns on indicating a valid echo is being detected. After the second limit is taught, the two limits are saved in non-volatile memory. The green LED fast flashes for 3 seconds to indicate the limits were successfully saved.

While setting either limit, if no echo is detected, the green and amber LED fast flashes indicating no object is detected. After 5 seconds, the sensor resumes operation with the old limits. If either limit is not set in 30 seconds, a limit time out occurs, the LED flashes green and amber for 3 seconds indicating the error. The sensor then resumes operating with the old limits.

If not using an optional push-button, the process is similar. The white teach wire (pin 2) can be grounded to the blue DC return wire (pin 3) to simulate the pushing of the button. All LED indications and the teach sequence is identical to the previously detailed process.

How Does It Work?

During teach and operation, the Virtu™ sensor continually and accurately measures the elapsed time from the first pulse echo received after each pulse transmission. The transmitted pulse begins a time clock to register the elapsed time of the first received pulse echo. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula D=TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its first received echo; Vs = the velocity of sound, approximately 335 meters (1100 feet) per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the analog span limits. These limits are shown in the illustration as Dwi and Dwo. If D is at or within the analog span limits, an output value for D, relative to the analog span limits is generated.

Beam Plots

The following plots, developed from data collected at 20°C and zero air flow, define the boundaries and shape of the sonic beam for the Virtu series sensors.

The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. The plot for each sensor series is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis.

In each sensor series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin.

These and other plots are available from the SCC upon request.

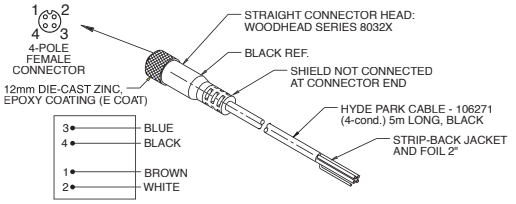
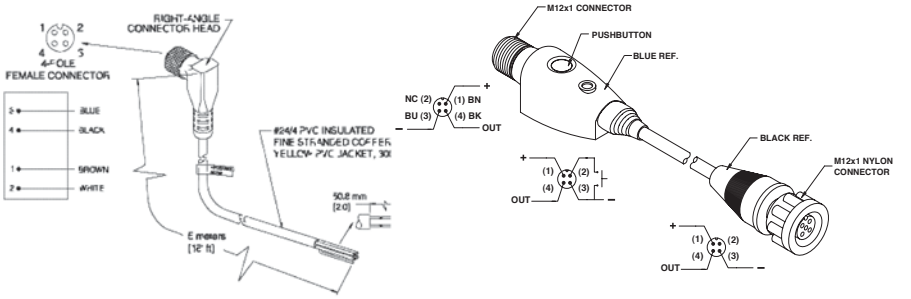
Accessories

AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for barrel and flat-profile micro sensors)



PB100 In-line accessory push-button for teaching window limits (for Virtu series sensors).



AC132 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)

General Specifications

Sensing: [T_A=20°C (68°F)] -Large Flat Target
Range: 50.8 mm (2.0 in.) to 508 mm (20 in.)
Maximum plane-reflector angle: ±5°
Sonic Cone Angle: See beam plot

Window-edge accuracy: ±1.27 mm (0.050 in.) @ constant temperature

Minimum object size Rod: 2.5 mm (0.098in) at 254.0 mm (10.0") range, 0°tilt
Factory Set sensing window 50.8 mm (2.0 in.) to 508 mm (20 in.)
Temperature Compensation Temperature Compensated

Power Requirements:
Supply Voltage: +15 to 24 VDC (±10%) @ 40 mA max (including output load)
Protection: ESD and reverse-polarity

Analog Output:

CA Models:
Output Range: 4-20 milliamps
Load resistance: 10 to 350 ohms
Protection: ESD and short circuit

VA Models
Output Range: 0-10 volts
Load resistance: 2K ohms minimum
Protection: ESD and short circuit

Pushbutton Input:
Active voltage level: < 1.0 volt
Inactive voltage level: > 2.5 volts
Activation On/Off time: > 25 ms (3 seconds to arm for limit setup)

Response Time: 50 ms to 95% of final output value

Indicators:
Green LED: Off when object is within range
Amber LED: On when object is within window
Red LED: Intensity varies directly with output magnitude

Connections
Cable style models: (VM1 only)
24 AWG, foil shield, lead-free, PVS jacket
4-conductor, 3m (10') long
Connector style models:
12mm, circular 4-pole, male micro connector

Protection
Power Supply: Current-limited over voltage, ESD, reverse polarity
Output: Current-limited over voltage, ESD, over current
Input: Current-limited over voltage, ESD, reverse polarity

Environmental:

Operating Temperature: -30°C to 70°C (-22°F to 158°F)

Storing Temperature Range: -40°C to 85°C (-40°F to 185°F)

Operating Humidity: 100% non-condensing

Protection Ratings: NEMA 4X (indoor use only), IP67

Chemical Resistance: Resists most acids and bases, including most food products.

Accessories

12 mm & Flat-Profile Ultrasonic Sensors

SUPERPROX® Model SM300 Series
Proximity Sensing

Model SM302 Series
Dual-level Sensing

- ***Field programmable capability***
- ***CE certified***

Tiny, ultrasonic sensors second to none in efficient, fast response proximity sensing

For the first time in sensing history, Hyde Park makes available to OEMs and end users in almost every industry, a prox sensor that combines small size and with fast response to detect virtually any material without adjustment of any kind. This new SUPERPROX® 300 series represents the first reliable, "install-it-and-forget-it" replacement for inductive and fixed-field photoelectric sensors in solving industry-wide proximity sensing problems.

The threaded, 12 mm diameter and flat-profile housing allows the sensor to be easily embedded in a machine where larger, longer-range proximity sensors may not fit. Like other Hyde Park sensors, the SM300 series is not affected by such contaminants as oil, dirt, water, powder, splashing food, dust, caustic cleaning solutions, and frequent wash-downs in the reliable detection of all materials. Objects of different and changing colors, shapes, and composition are all candidates for these tiny sensors whether they are transparent or opaque, liquid or solid. All this with no sensor adjustment of any kind required.

Field Programmable Sensor

SUPERPROX+® software combined with the Model AC441A configurator interface module enables the SUPERPROX® SC300 series sensors to be programmed by the user with either standard or custom sensing configurations. These field programmable sensors use an 'SC' prefix in the model number to designate and differentiate the sensors from factory configured SM300 series models.

All the unique sensing capabilities and functions available in the SM300 sensor series are also available in field programmable SC300 models. An even greater sensing capability in functionality is realized with these field programmable sensor models through the user-friendly SUPERPROX+™ software to allow customization for specific applications.

For more details on the Model SC300 series and other field programmable sensor models along with the Model AC441A configurator interface module go to the SUPERPROX+™ section found on page 4-143 in the catalog.

Operation

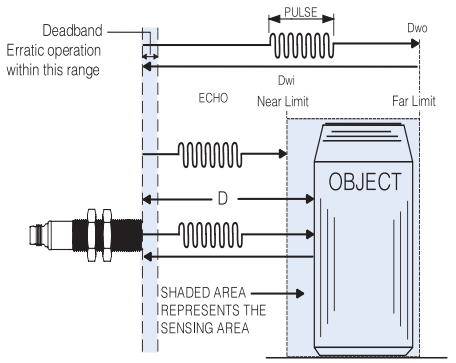
Combining the latest piezoelectric and microprocessor technology, the SUPERPROX® 300 series sensors are self-contained, pulse-echo devices that both transmit and receive sonic energy within a set extended sensing range. During operation, the sensor continuously transmits to and receives sonic pulses from objects in front of it. Pulse echoes received from objects within the fixed sensing window limits are confirmed as detected objects by a discriminating microprocessor while all other objects are ignored.

Easy to Set Up

Setting up the SUPERPROX® 300 series of proximity sensors for operation requires but a few moments. Once mounted in a bracket and properly aligned with the object to be detected, the sensor is ready to detect. It is truly a "set and forget" series of proximity sensors.

How does it work?

During setup and operation, the SUPERPROX® 300 series sensors continually and accurately measure the elapsed time of every pulse transmission. The transmitted pulse begins a time clock to determine the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = velocity of sound, approximately 1100 feet per second.



During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the fixed window limits. These limits are shown in the illustration as Dwi and Dwo. If D is at or within the limits, an output change takes place and remains unchanged until the echo either does not return or it returns from outside the fixed limits.

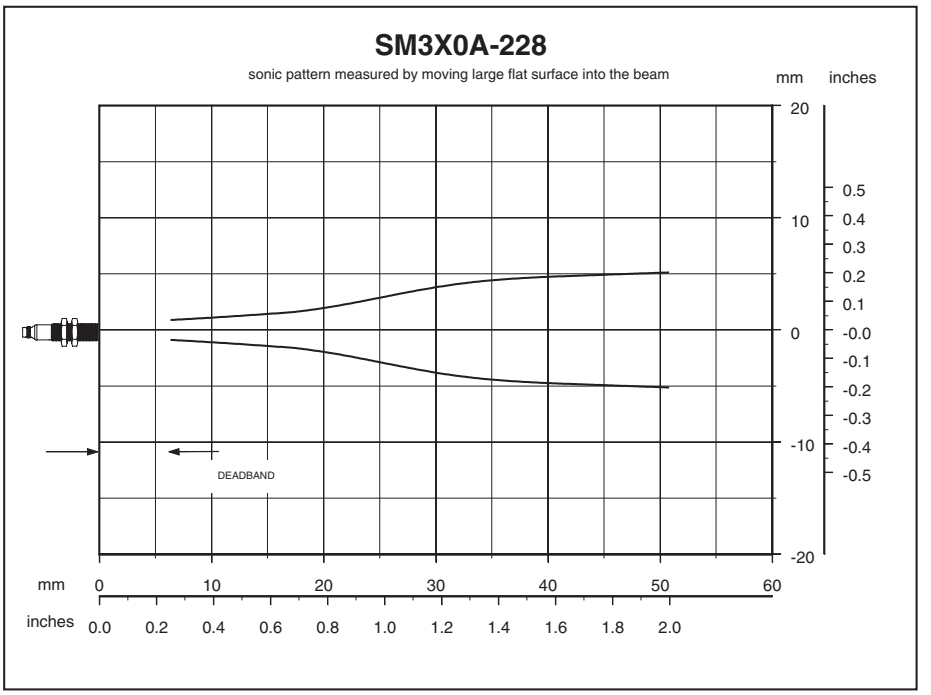
Applications

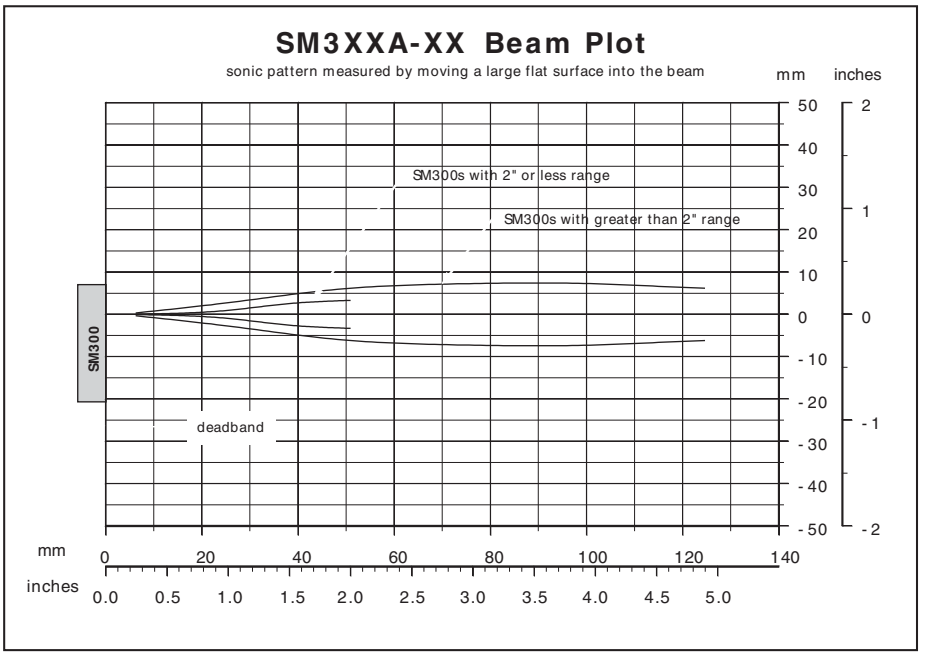
For applications specific to the SUPERPROX® 300 series sensors, see either the product information sections that follow or the Application/Sensor Selection Chart on Page 2-1.

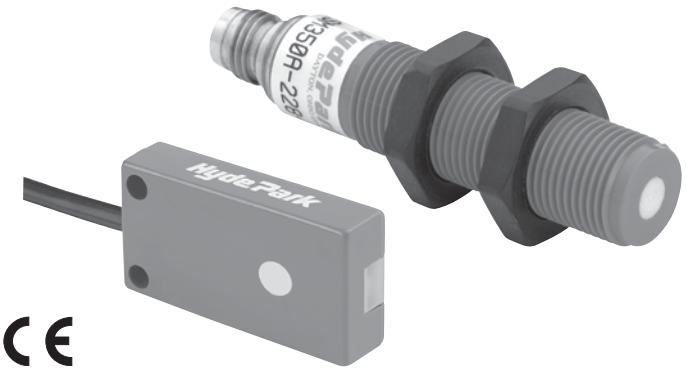
Beam Plot

The following plot developed from data collected at 20°C and zero air flow, defines the boundaries and shape of the sonic beam for the SUPERPROX® 300 series sensors.

The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. This plot is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis. In this sensor series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin. This and other plots are available from the SCC upon request.







SUPERPROX® Ultrasonic Proximity Sensors

Extended-range Proximity Sensing

- ***Self-contained, 12 mm, threaded barrel or flat-profile housing***
- ***Extended sensing range of 102 mm (4")***
- ***Field programmable capability***
- ***All-material, proximity sensing capability***

The world's first 12 mm and flat-profile, fast response, multi-material ultrasonic, proximity sensor… the efficient solution to close-up sensing

Use the highly versatile SUPERPROX® Model SM300 series of proximity sensors as a replacement for inductive proximity sensors and fixed-field photoelectric sensors. Its long range, small size, fast response, performance, reliability, and low cost, offers a simple, easy to use,once-and-for-all solution to many of the proximity sensing problems encountered daily in almost every industry.

The SM300 proximity sensor provides reliable detection of objects up to 102 mm (4") from the sensor face, performance unmatched by other proximity sensors of the same size or larger. At this distance, the sensor is safely out of harms way, that is an especially important cost savings benefit. Easy to install, the SM300 is available in two different housing styles: the 12 mm threaded barrel or the flat-profile housing both available in ULTEM® plastic. As with all SUPERPROX® sensors, cable and connector styles are available.

The SM300 is inherently capable of automatically detecting all materials regardless of color, shape, and composition (transparent or opaque, liquid or solid) including clear glass, mirrors, wood, powder, ink, ferrous and nonferrous metal, plastics, and objects that change colors. While some sensors require adjustment (through the use of a sensitivity potentiometer) to the material they are detecting, the SM300 detects most materials automatically. With protection ratings of NEMA 4X (indoor use only) and IP67, the sensor resists most acids and bases and is compatible with many chemicals, cleaning solutions, and chemical-based products. The SM300 sensor series is CE certified.

These are just a few of the benefits of this new, small, multi-material, extended-range proximity sensor from the world leader in ultrasonic sensing technology.

The applications suited to the SM300 proximity sensor are as broad as the benefits just mentioned. And because of the sensor's versatility, it is a solid candidate for a large number of y proximity sensing and non-contact switching needs in the plant. The SM300 can detect positive stop and true home positions for servo-control systems and tool and parts presence in automated CNC centers and assembly equipment. It is an ideal solution for sensing part and pin presence and punch-through verification in stamping dies. Other applications include die open and close detection in stamping, plastic injection molding, die casting applications, and many other applications where traditional proximity sensing methods cannot reliably detect the large variety of materials running through the process or they are limited by sensing range.

Operation

The SM300 series is a self-contained, pulse-echo, proximity sensing device that both transmits and receives sonic energy within an operating distance of

6 mm (0.25") to 102 mm (4"). The sensor combines the latest piezoelectric and microprocessor technology for the best possible performance in almost any sensing application.

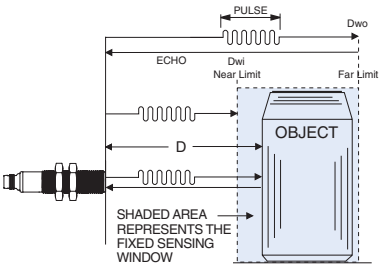
This 500 kHz proximity sensor operates on 12 to 24 VDC and is equipped with both sinking (NPN) and sourcing (PNP) outputs. The sensor has two status LEDs: a green LED indicates "power on" when no object is present, and an amber LED indicates object presence, regardless of output state (N.O. or N.C.). Just one LED is illuminated at any given time.

During operation, the sensor transmits to and receives sonic pulses from objects in front of it without interruption. A discriminating microprocessor makes it possible for the sensor to accept only those pulse echoes received from objects within the fixed sensing window limits and ignore all other objects. An object is detected when it is within the fixed sensing window.

How does it work?

During setup and operation, the SM300 series sensor continually and accurately measures the elapsed time of every pulse echo reception after each pulse transmission. The transmitted pulse starts a time clock to register the elapsed time for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled to the object or surface and back to the sensor, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo reception; Vs = the velocity of sound, approximately 1100 feet per second.

While the sensor is in operation, the calculated distance (D) between the sensor and the object is compared to the distances associated with the fixed window limits. These limits are shown in the illustration above as Dwi and Dwo.



If D is within these limits, an output is generated. The output remains on until the echo does not return or it returns from outside the window limits.

Mounting & Setting up the SM300 Proximity Sensor

The SM300 series proximity sensor should be mounted in a bracket that allows it to be adjusted for proper alignment with the object. Set up for optimum object sensing and sensitivity merely involves positioning the sensor so the sonic beam is aligned with and perpendicular to the surface of the object being detected and the object is at or near the center of the sensing window. Once the sensor is mounted, no other adjustments are required.

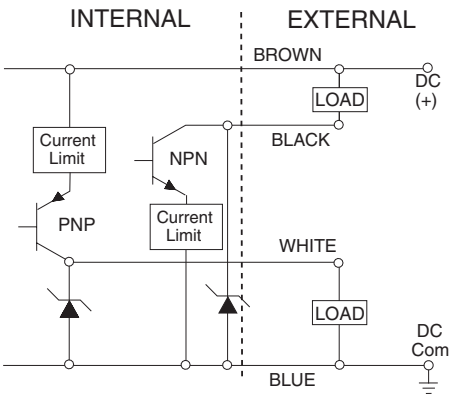
Note: Small objects are best detected at 38 mm (1.5").

Electrical Wiring

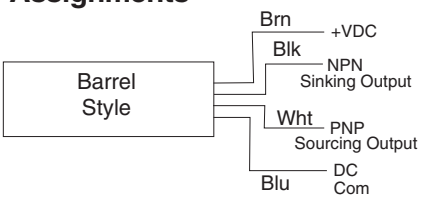
The sensor cable must be run in conduit, free of any AC power or control wires.

Outputs

NPN Sinking and PNP Sourcing

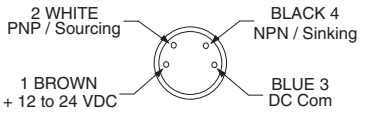


Cable Style Wire Assignments



Connector Style Pin Assignments

SM350



Note: Sensor view: Pico connector

SM380

General Specifications

Sensing [T_A = 20° C (68° F)]

Sensing Range:6.4 mm (0.25") to 102 mm (4.0") (large flat objects) Highest sensitivity over the range 38.1 mm (1.5") to 102 mm (4.0")
Sonic Frequency: 500 kHz
Minimum-size Detection: 2.5 mm (0.098") diameter rod or 1.0 mm (0.039") wide flat bar at a distance of 38 mm (1.5")
Note: Smaller object may not be detected at closer distances
Maximum Angular Deviation: ± 8° on a 100 mm x 100 mm (4" x 4") flat target at a distance of 89 mm (3.5") (4" range flat-profile)
Sonic Cone Profile: see beam plot on page 4-2
Limit Position Accuracy: ± 1.6 mm (0.062") max.
Repeatability: ± 0.7 mm (0.027") or better

Power Requirements

Supply Voltage: 12VDC to 24VDC ± 10%, regulated supply
Current Consumption: 25 mA max. (excluding load)
Power Consumption: 0.5 W max. (excluding load)

Output

Sinking Output (NPN):
Maximum on-state voltage: 0.75 V @ 100 mA
Maximum load current: 100 mA
Maximum applied voltage: 30 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop: 1.10 V @ 100mA
Maximum load current: 100mA
Output voltage: V_{Supply} - 1.10 V @ 100mA

Response Time

2.0 ms on/ 2.0 ms off (2" range barrel unit)
3.0 ms on/ 3.0 ms off (2" range flat-profile unit)
4.0 ms on/ 4.0 ms off (4" range flat-profile unit)

Indicators

Green LED: Illuminated if power applied and no object detected
Amber LED: Illuminated if object is detected within the window, regardless of output polarity (N.O./N.C.) style.
Note: Green and amber LEDs are never illuminated simultaneously

Connections

Cable Style Models: 28 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3M (10') long
Connector Style Models: 8 mm, circular 4-pole, male Flat-profile pigtail 152 mm (6.0") long micro-connector

Protection

Power Supply: Current-limited over-voltage, ESD, reverse polarity
Outputs: Current-limited over-voltage, ESD, reverse polarity, over-current

Environmental

Operating Temperature Range:
-30° to 70°C (-22° to 152°F) @ 12V supply
-30° to 65°C (-22° to 149°F) @ 24V supply
Storage Temperature Range:
-40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X, IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: CE conformity is declared to:
EN60947:1998 (proximity sensors)
EN61010-1 (general safety)
EMC: FCC 47 CFR Part 15 Class A (USA)
EN5022:1994 / A2:1997 Class A ITE (EU)
VCCI Class A ITE (Japan)
ASNZS 3548:1995 / CISPR 22 Class A ITE (Australia)
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model: 12 mm (0.472") dia. x 1 mm-6g threaded housing x 53.3 mm (2.10") long
Connector Model: 12 mm (0.472") dia. x 1 mm-6g threaded housing x 55 mm (2.17") long; Overall length, including right angle, connector/cable assembly: 67.6 mm (2.66")
Flat-profile
Cable/Connector Model: 33.0 mm (1.3") H x 7.62 mm (0.3") W x 19.05 mm (0.75")L
Housing: Shock and vibration resistant
Case: ULTEM® plastic (FDA Approved)
Transducer Face: Epoxy
Sensor Cable: Lead-free, PVC jacketed, black
LED light ring: Polycarbonate

SUPERPROX® Ultrasonic Dual-Level Sensors

- *High resolution 500 kHz ultrasonic frequency*
- *Self-contained, 12 mm barrel or flat-profile housing styles*
- *Dual-level on/off latch*
- *Field programmable capability in 12 mm and flat-profile models*
- *CE certified*

Two styles of reliable ultrasonic sensors offer short range sensing solutions for dual-level control applications where mounting space is very limited

Functionality of the versatile, industry-proven SUPERPROX® Model SM502 series is now part of the Model SM302 series of 12 mm or flat-profile, dual-level sensors. Utilizing the same world-leading, ultrasonic technology, these two styles of "smart" sensors can be selected for specific on/off latch control functions. Other model selections include a variety of output types, response times, sensing ran-ges, and functionality to provide the sensing solution for a wide assortment of non-contact, short-range, dual-level control applications.

Operation

Hyde Park's 12 mm barrel and flat-profile style of self-contained, dual-level sensors monitor and control most nonhazardous liquid or dry material levels within a sensing range of 31.7 mm (1.25") to 101 mm (4").

When selecting by model number from several factory-programmed, dual-limit parameters (near limit and far limit), the sensor can be set up to perform an on/off latch control function.

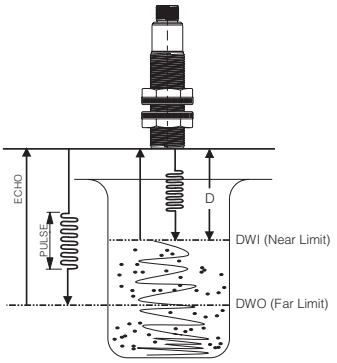
The 12 mm threaded barrel and the flat-profile style housing are available in ULTEM® plastic. Both provide ease-of-installation convenience, particularly in applications with hard-to-mount or limited-space mounting areas. All models in this sensor series operate on 12 to 24 VDC regulated power.

The Model SM302 sensor series offers dependable operation and compatible integration with most programmable logic controllers. Each sensor is epoxy sealed to withstand harsh, wet, messy, and dusty environments typically associated with level-control applications. With protection ratings of NEMA 4X (indoor use only) and IP67, both sensor styles are impervious to changing light conditions, colors, noise, noncondensing humidity, caustic chemicals, and other hostile environments. They are resistant to most acids and bases, including most food products. The sensing transducer is made of silicone rubber and the sensors carry the CE mark.

How does it work?

During setup and operation, these SM302 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula, D = TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echoreceptions, Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object (e.g., level) is compared to the distance between the sensor and the near and far span limits. These limits are shown in the illustration below as Dwi and Dwo. When D is equal to one of the two span limits, according to the level-control functions, an output change takes place.



Level-Control Functions

The level-control output in the Model SM302 series can be configured for one of two different operating functions. Using the Model Reference Guide, the sensor can be selected to perform either a pump-in level-control function or pump-out level-control function.

Pump-in Level Control

When the level moves beyond the far (low) limit, the sensor level control output switches state and latches, starting a pump-in process. The sensor level control output does not change state until the level moves back beyond the near (high) limit to stop the pumping or filling process.

Pump-out Level Control

When the level moves beyond the far (low)limit, the level control output switches state and latches, stopping a pump-out process. The sensor level control output does not change state until the level moves back beyond the near (high) limit to restart the pump-out process.

Loss of Echo Operation

Output Off on Loss of Echo

Loss of echo occurs when the sensor does not receive echoes from an object within its sensing range for more than one second. When this occurs, the sensor's output automatically switches OFF. When the sensor again receives echoes, the output assumes the state relative to the control limit setpoints.

Output Holds on Loss of Echo ("LE" Option)

The "LE" suffix indicates an available option for users who do not prefer the standard response to loss of echo.

With the LE option, when loss of echo occurs, there is no change in the output state of the sensor. When the sensor again receives echoes, the output assumes the state relative to the control limit setpoints.

Mounting

The Model SM302 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment. Hyde Park offers the:

Model AC235 right angle, stainless mounting bracket

Model AC236 stainless and polya mide conveyor-rail clamp/bracket set

Model AC237 stright, stainless, mounting bracket.

All are illustrated with dimensions on Pages 4-14 and 4-15.

Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

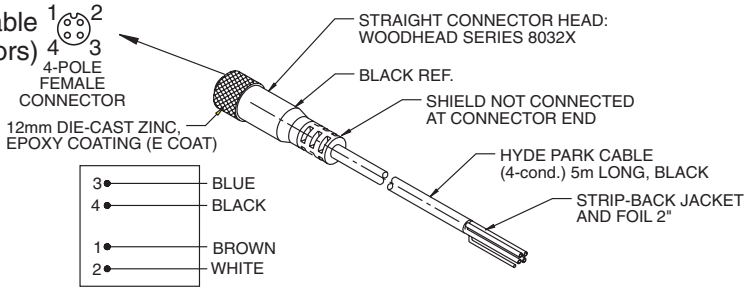
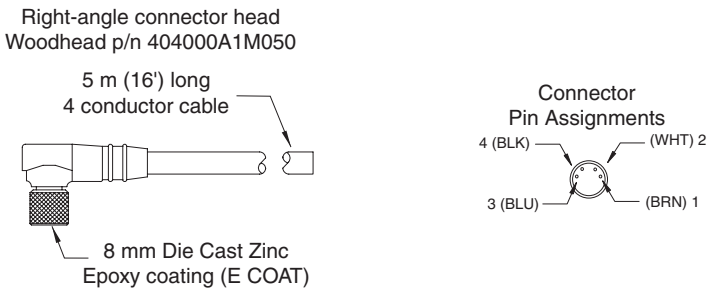
Accessories

AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for barrel and flat-profile micro sensors)



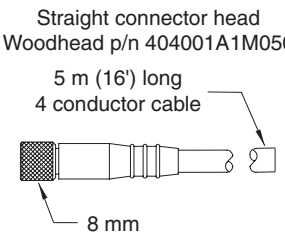
AC134

Right-angle, M8 pico, 4-conductor cable/ connector assembly, 5 m (16').



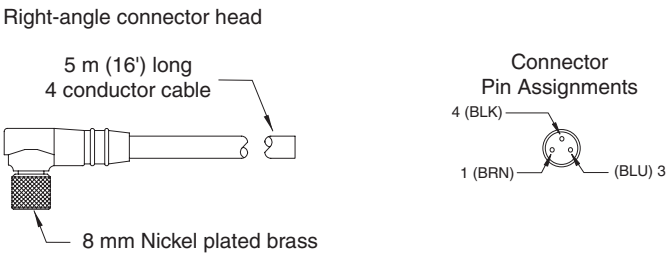
AC135

Straight, M8 pico, 4-conductor cable/ connector assembly, 5 m (16').



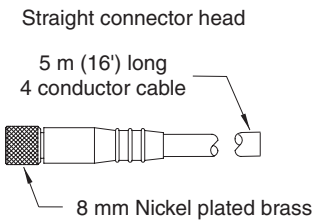
AC141

Right-angle, M8 pico, 3-conductor cable/ connector assembly, 5 m (16') (for barrel connector-style sensors)



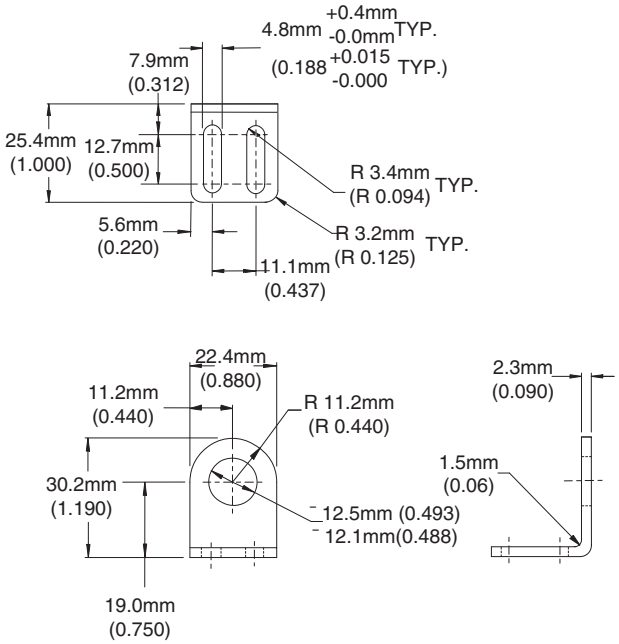
AC142

Stright, M8 pico, 3-conductor cable/connector assembly, 5 m (16') (for barrel connector-style sensors)



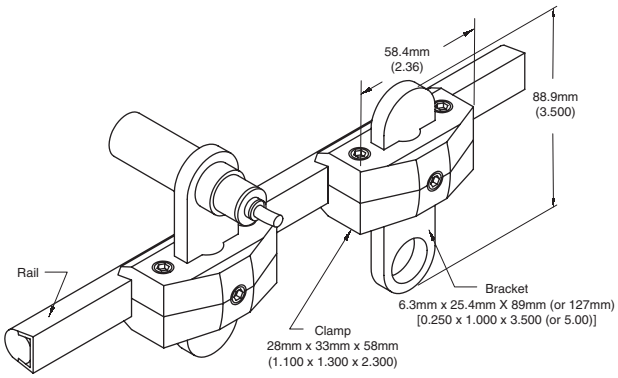
AC235

Right-angle, stainless, mounting bracket (for 12 mm barrel sensors)



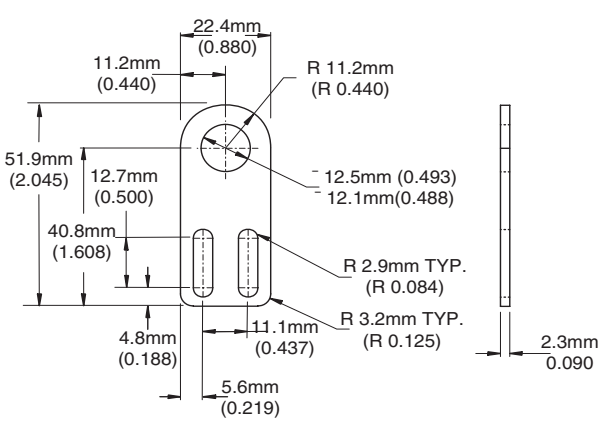
AC236

Stainless and polyamide conveyor-rail clamp/ bracket set (for 12 mm barrel sensor)



AC237

Straight, stainless, mounting bracket (for 12 mm barrel sensors)



General Specifications

Sensing [T_A = 20° C (68° F)]

Sensing Range:
31.7 mm (1.25") to 102 mm (4.0") (large flat objects)
Highest sensitivity over the range 38.1 mm (1.5") to 102 mm (4.0")
Sonic Frequency:
500 kHz
Minimum-size Detection:
2.5 mm (0.098") diameter rod or 1.0 mm (0.039") wide flatbar at a distance of 38 mm (1.5")
Note: Smaller object may not be detected at closer distances
Maximum Angular Deviation:
± 8° on a 100 mm x 100 mm (4" x 4") flat target at a distance of 89 mm (3.5") (4" range flat-profile)
Sonic Cone Profile:
see beam plot on page 4-2
Limit Position Accuracy:
± 1.6 mm (0.062") max.
Repeatability:
± 0.7 mm (0.027") or better

Power Requirements

Supply Voltage:
12VDC to 24VDC ± 10%, regulated supply
Current Consumption:
25 mA max. (excluding load)
Power Consumption:
0.5 W max. (excluding load)

Output

Sinking Output (NPN):
Maximum on-state voltage: 0.75 V @ 100mA
Maximum load current: 100 mA
Maximum applied voltage: 30 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop: 1.10 V @ 100mA
Maximum load current: 100mA
Output voltage: V_{Supply} - 1.10 V @ 100mA

Response Time

3.0 ms on/ 3.0 ms off (2" range)
4.0 ms on/ 4.0 ms off (4" range)

Indicators

Green LED:
Illuminated if power applied and no object detected
Amber LED:
Illuminated if object is detected within the window,regardless of output polarity (N.O./N.C.) style.

Note: Amber and green LEDs are never illuminated simultaneously

Connections

Cable Style Models:
28 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3M (10') long
Connector Style Models:
8 mm, circular 4-pole, male
Flat-profile pigtail 152 mm (6.0") long micro-connector

Protection

Power Supply:
Current-limited over-voltage, ESD, reverse polarity
Outputs:
Current-limited over-voltage, ESD, reverse polarity, over-current

Environmental

Operating Temperature Range:
-30° to 70°C (-22° to 152°F) @ 12V supply
-30° to 65°C (-22° to 149°F) @ 24V supply
Storage Temperature Range:
-40° to 100°C (-40° to 212°F)
Operating Humidity:
100%
Protection Ratings:
NEMA 4X (indoor use only), IP67
Chemical Resistance:
Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: CE conformity is declared to:
EN60947:1998 (proximity sensors)
EN61010-1 (general safety)
EMC: FCC 47 CFR Part 15 Class A (USA)
EN5022:1994 / A2:1997 Class A ITE (EU)
VCCI Class A ITE (Japan)
ASNZS 3548:1995 / CISPR 22 Class A ITE (Australia)

Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model:
12 mm (0.472") dia. x 1 mm-6g threaded housing x 53.3 mm (2.10") long
Connector Model:
12 mm (0.472") dia. x 1 mm-6g threaded housing x 55 mm (2.17") long; Overall length,including right angle, connector/cable assembly: 67.6 mm (2.66")
Flat-profile
Cable/Connector Model:
33.0 mm (1.3") H x 7.62 mm (0.3") W x 19.05 mm (0.75")L
Housing:
Shock and vibration resistant
Case:
ULTEM® plastic (FDA Approved)
Transducer Face:
Epoxy
Sensor Cable:
Lead-free, PVC jacketed, black
LED light ring:
Polycarbonate

A selection of SUPERPROX® ultrasonic sensors for your tough sensing applications.

Hyde Park has combined piezoelectric and microprocessor technology to become the world's leading manufacturer of ultrasonic "smart" proximity sensors. For more than 40 years, Hyde Park sensor products have provided reliable, cost-effective answers for the most difficult, non contact sensing applications.

The SUPERPROX® 500 series of ultrasonic smart proximity sensors represents a broad range of sensing solutions in place today where other sensing technologies have not met standards for reliability and productivity. The difficulties associated with clear containers, metal parts, irregular shapes and sizes, harsh environments, high-speed runs, cleaning solutions, and frequent washdowns are simply no match for this reliable sensor line. The sensors are impervious to changing light condition, colors, dust, caustic chemicals, and other hostile environments. Using sound energy as the sensing medium, these sensors can be counted on day in and day out in detecting objects whether transparent or opaque, liquid or solid, and as small as 6 mm (1/4"), regardless of color or shape. In some cases, features as small as 0.076 mm (0.003") can be detected.

"Smart" SUPERPROX® 500 Proximity Sensors for Top Performance

The SUPERPROX® 500 series sensors are self-contained, pulse-echo devices that both transmit and receive sonic energy within sensing ranges up to 2 meters (79"). The sensors use the latest ultrasonic technology along with a discriminating microprocessor and push-button setup program to ensure the ultimate in sensing reliability. This state-of-the-art sensing concept enables the SUPERPROX® 500 series sensors to ignore all surrounding interference and detect only the designated object. When the object to be detected is at or within the user-set "window" limits, either a discrete output switches or an analog output changes proportionally with respect to those limits, depending on the sensor model in operation.

Easy to Set Up

The SUPERPROX® 500 series sensors are very easy to set up and operate. The sensor outputs, whether discrete or analog, are compatible with most logic control systems and programmable controllers. One of the unique benefits of the sensor series is the ease in which it can be set up for an application by the user. Inside a sealed control compartment at the rear of the sensor are setup switches, push-buttons, and potentiometers, the combination of which is determined by the specific model type. Access to the sealed compartment is gained by removing two screws in the cover. A short plastic tether prevents separation of the cover from the sensor.

How does it work?

During setup and operation, the SUPERPROX® 500 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to determine the elapsed time for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = velocity of sound, approximately 1100 feet per second.

When setting the sensing window limits, using the "LIMITS" push-button in the control compartment place a target or object in front of the sensor succes-

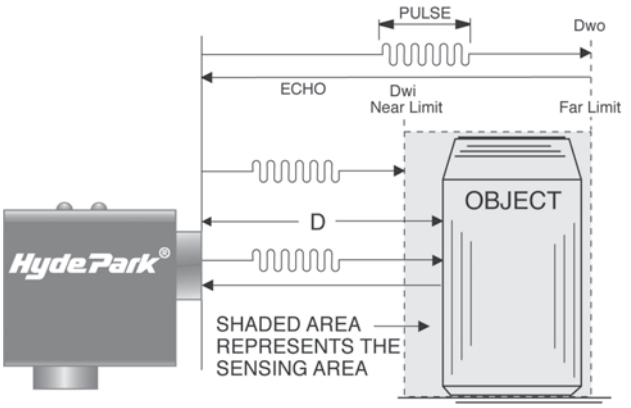
Continuous level or distance sensing with analog output

sively at the set points representing the desired inner (Dwi) and outer (Dwo) limits shown in Figure 1. When the LIMITS push-button is pressed at each set point, the respective distances (Dwi and Dwo) from the sensor are automatically calculated and stored in the sensor memory to represent the sensing window limits. During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the set window limits. If "D" is at or within the window limits, an output change takes place and remains unchanged until the echo either does not return or it returns from outside the window limits.



To meet a multitude of application needs, the SUPERPROX® 500 series sensors offer a variety of models and sensing techniques.

Proximity sensing with no delay

Model SM500 series

Typical Application:

Object detection

See Model SM500 series product data on Page 4-23.

Dual-level sensing with on &off latch control

Model SM502 series

Typical Applications:

Level monitoring and control as in starting and stopping a pump or opening and closing a valve

See Model SM502 series product data on Page 4-31.

Proximity sensing with on & off delay

Model SM503 series

Typical Application:

Jam & Gap detection

See Model SM503 series product data on Page 4-41.

Synchronized/gate-controlled proximity sensing

Model SM504 series

Typical Applications:

Full or empty case inspecting, on-demand-controlled sensing or inspecting, in-case-container counting, automation control sensing, object-in-area sensing, down-container sensing, differential-height inspecting

See Model SM504 series product data on Page 4-47.

Rate & stopped motion proximity sensing with on delay

Model SM505 series

Typical Applications:

Container backup detection on either a mass conveyor or a single file conveyor

See Model SM505 series product data on Page 4-53.

Continuous level or distance sensing with analog output

Model SM506 series

Typical Applications:

Level/distance sensing applications ranging from complex closed-loop control to simple status (e.g., distance measuring monitoring functions

See Model SM506 series product data on Page 4-61.

The SUPERPROX 500 sensor series is CE certified with the AC-power models qualified to carry the ETL safety label.

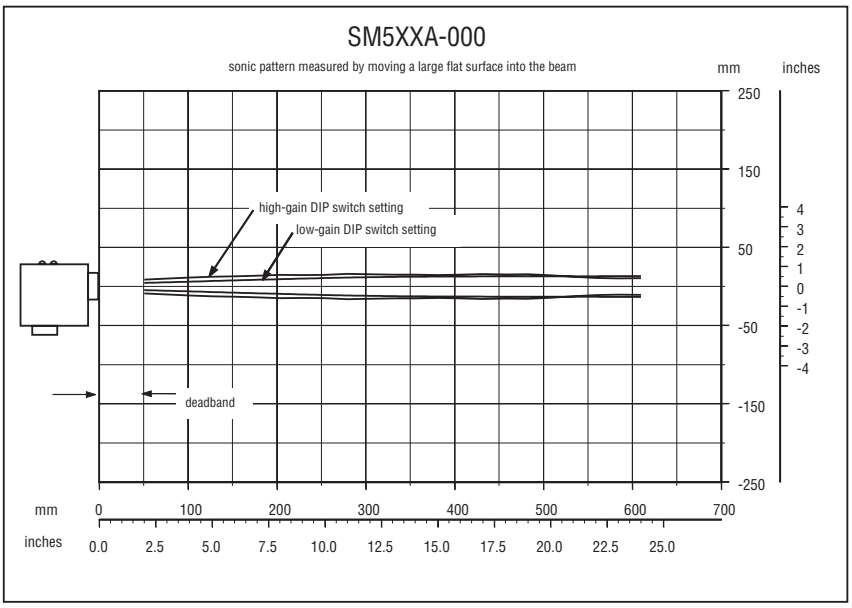
Beam Plots

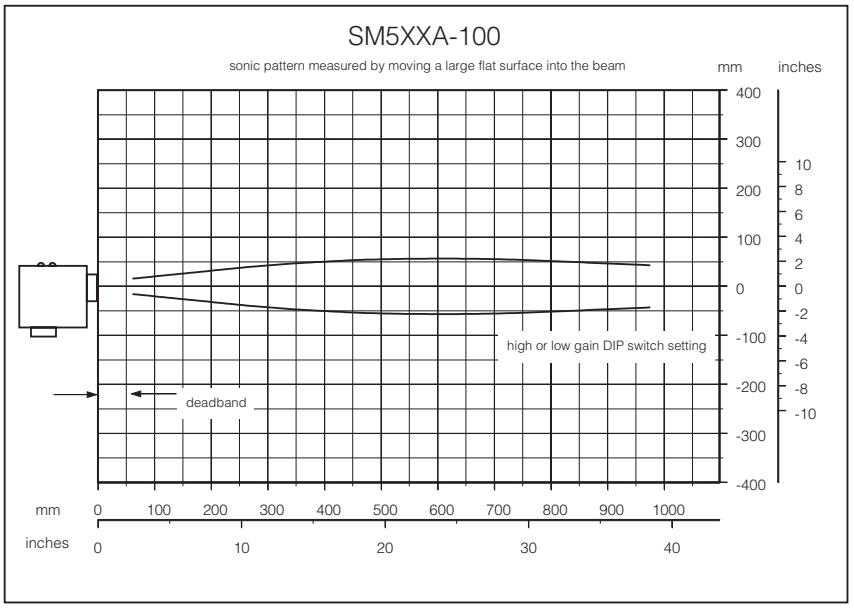
The following plots, developed from data collected at 20°C and zero air flow, define the boundaries and shape of the sonic beam for various Hyde Park ultrasonic sensor series.

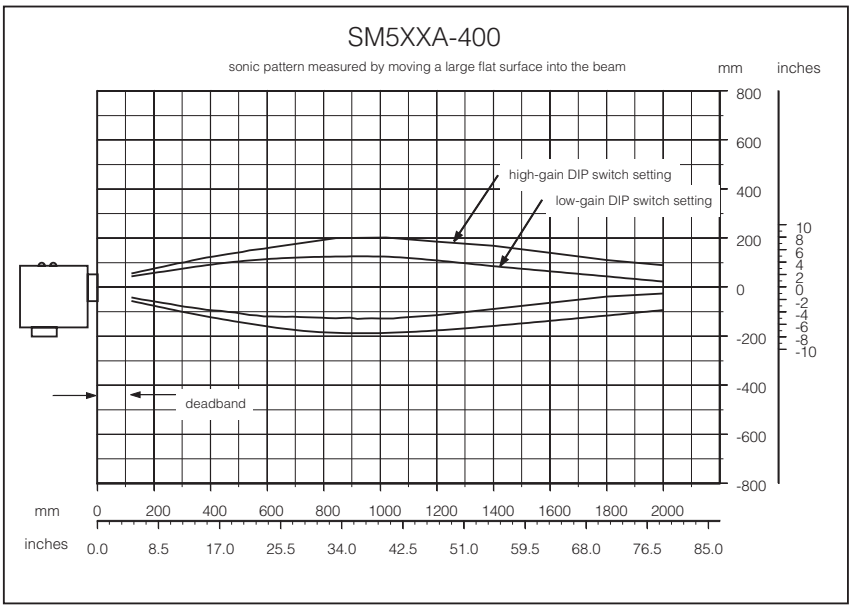
The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. The plot for each sensor series is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis.

In each series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin.

These and other plots are available from the SCC upon request.



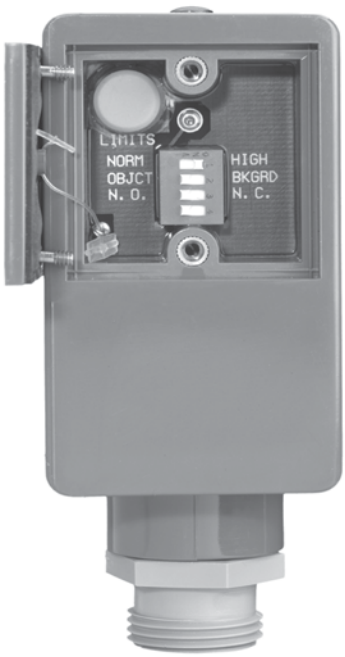




SUPERPROX® Ultrasonic Proximity Sensors

No delay sensing

- *Easy push-button setup for the specific application*
- *Onboard microprocessor for reliability and repeatability*
- *Non contact sensing range up to 2 m (79")*
- *Epoxy sealed in tough ULTEM® housing*
- *Virtually impervious to the harshest environments*
- *CE certified*
- *AC-powered models ETL listed*



This basic model series in the SUPERPROX® family of ultrasonic, non contact sensors offers reliable object detection where simple on/off control of the outputs is required. These "smart" sensors use the latest ultrasonic technology to ensure the ultimate in sensing reliability through a discriminating microprocessor, push-button setup program.

It is this discrete sensing program that enables the SUPERPROX® sensors to detect only those objects that are within a set "window" and to ignore all others. A simple push-button is used to set a window as small as 13 mm (1/2").

Used throughout plants in all industries, the SUPERPROX® Model SM500 (cable style) and Model SM550 (connector style) series of non contact sensors control various operations. Typical applications include loop control and end of roll detection, web breaks, and parts presence. The sensors are also used to detect containers and produce outputs for no container/no fill and no container/no cap control. In conveying operations, with objects in a captured state, these sensors are used for counting at speeds up to 2000 units per minute.

AC and DC models are available with a sensing range of 51 mm to 1 m (2 to 39") and 120 mm to 2 m (4.7 to 79"), respectively. These sensors carry the CE Mark and the AC-powered models are also ETL approved. The sensor housing meets NEMA 4X (indoor use only) and IP67 industry standards. A Dairy 3A compliant housing is available as an option.

Control Compartment

A unique feature available to the user of these sensors is the ability to quickly set up each sensor for a specific application. The sensor is configured through either three or four slide switches, depending on the model, and a push-button (See Figure 1) located inside a water-tight control compartment on the sensor. To access the controls, remove the small square cover on the back of the sensor. Simply loosen the two flat-head cover screws and insert a small-blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor. NOTE: The switch settings may require changing for the intended application.

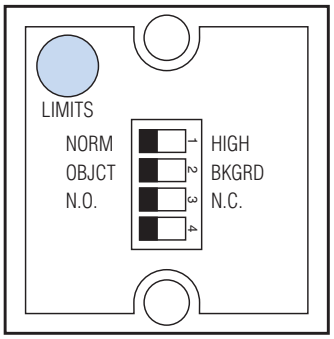


Figure 1

Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a normal or a high sensitivity mode. Place this switch in the NORM position for sensing liquid or solid materials. Place the switch in the HIGH position for sensing soft or porous materials that will absorb some of the ultrasonic energy.

Switch 2 configures the sensor to operate in either an object or a background sensing mode. Place this switch in the OBJCT position to perform a sensing function for receiving the reflected ultrasonic energy directly off an object. Place this switch in the BKGRD position to perform a break-beam sensing function for receiving the reflected ultrasonic energy directly off a fixed background target.

Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 (Not used)

Model Reference Guide – SM500 Series

Sensor Limits Setup Push-button

First, during installation make sure the sensor face is as parallel as possible to the surface of the material being detected.

To set the limits, simply place an object at the desired distance from the sensor for one limit and press the LIMITS push-button once. This sets the first limit and switches the sensor output to an inactive state during the limit setup. While the LIMITS push-button is depressed, the multicolored LED located on top of the sensor is amber. Upon release of the push-button, the LED flashes amber indicating that the second limit needs to be set within 30 seconds. Place an object at the desired position for the second limit and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED flashes amber momentarily and then turns green to indicate acceptance of both limits. If 30 seconds elapse before the second limit is set, the limits revert back to the previous settings.

At the same time, the sensor output switches from the inactive to the active state, placing the sensor into the operational mode and ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

When setting either limit if the echo from the object is too weak or distorted, the LED flashes RED for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again, being careful to keep the object surface parallel to the face of the sensor.

Minimum allowed distance between any two setup limits is 13 mm (1/2"). The multicolored LED flashes RED after the press and release of the LIMITS push-button for the second limit setting if the distance between the limit settings is less than 13 mm. The multicolored LED continues flashing RED either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds has elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 30 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.

A special feature provides an automatic 13 mm (1/2") window limits setup function. Simply place an object within the sensing range of the sensor and press the LIMITS push-button twice in succession without moving the object. A limit is set on a line 1/4" in front and back of the object surface nearest the sensor.

Multicolored LED Indicator During Limit Setup

Prior to pressing LIMITS push-button

- Off - Sensing no object or object is outside the sensing range
- Red - Sensing an object outside the set limits
- Green -Sensing an object inside the set limits

LIMITS push-button depressed for first time

- Amber - Sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for first time

- Flashing Amber - First limit accepted, waiting for second limit
- Flashing Red - First limit not accepted; retry setting limit

LIMITS push-button depressed for second time

- Amber - Sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for second time

- Green, Red, or Amber - Second limit accepted
- Flashing Red - Second limit not accepted; retry setting both limits

Multicolored LED Indicator in Operational Mode

- Off - Sensing no object or object is outside the sensing range
- Red - Sensing an object outside the set limits
- Green - Sensing an object inside the set imits

Red LED Indicator in Operational Mode

The red LED serves as a visual indicator for the sensor output. The LED is illuminated when the output is in an active (ON) state.

Electrical Wiring

Sensor wires must be run in conduit free of any AC power or control wires.

Sensor Wire Colors

DC Models	Cable Style	Connector Style
+12 to 24 VDC	RED	BROWN
NPN/Sinking Output	WHITE	BLACK
PNP/Sourcing Output	GREEN	WHITE
Common	BLACK	BLUE

AC Models*		
100 to 240 VAC	BROWN	BROWN
Switch Line Side	BLACK	BLACK
Switch Load Side	WHITE	WHITE
Neutral	RED	BLUE

***WARNING**

Not all cables are alike. Verify that connector pin outs and cable conductor colors match up with the wiring illustrations shown in the operating instructions.

General Specifications

Sensing

Ranges:
- 51 to 1 m (2 to 39")
- 120 mm to 2 m (4.7 to 79")

Sonic Frequency: 200 kHz

Power Requirements

DC Models:
- 12 to 24 VDC ± 10% @ 80 mA, 2 W max., excluding output load (regulated supply)

AC Models:
- 100 to 240 VAC, 50/60 Hz, @ 30 mA, 7.5 VA max., excluding load

Outputs

DC Models:

NPN Sinking: Switch selectable N.O./N.C.
- Sinking on-state voltage drop: Maximum 0.25 volts @ 60 mA
- Sinking load current: Maximum 100 mA
- Sinking output voltage: Maximum applied 30 VDC

PNP Sourcing: Switch selectable N.O./N.C.
- Sourcing output current: Maximum 100 mA
- Current limit protected to less than 160 mA

AC Models:

Triac, switch selectable N.O./N.C.
- Maximum continuous load current: 1 Amp
- Maximum applied output voltage: 260 VAC
- Maximum off-state leakage current: less than 50 µA (100% PLC/AC input interface compatibility)

Response Time

"On" 10 ms,
"Off" 10 ms to "On" 30 ms,
"Off" 30 ms, depending upon model

Indicators

Multicolored (Amber, Red, Green) LED: Indicates limits setup and operational modes

Red LED: Visual indicator for sensor output; Illuminated when output is in an active (on) state.

Connections

Cable Style Models:
- DC: 24 AWG, PVC jacket, 4-conductor, 3 meters (10') long, standard
- AC: 20 AWG, PVC jacket, 4-conductor, 3 meters (10') long, standard

Connector Style Models:
- DC: 4-pin "mini" style
- AC: 4-pin "mini" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity, fuse on AC model

Outputs: current-limited over voltage, ESD, over-current, fused TRIAC on AC model

Environmental

Operating Temperature Range: 0° to 50° C (32° to 122° F)

Storage Temperature Range: -40° to 100° C (-40° to 212° F)

Operating Humidity: 100%

Protection Ratings: NEMA 4X (indoor use only), IP67

Chemical Resistance: Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to: EN61010-1: 1990 including amend. No.1: 1992 EN55011 Group 1 Class A, EN50082-1. *Declaration of conformity available upon request.*

AC Models SM520/570 carry the ETL safety label.

Construction

Dimensions (overall)
- 92 mm (3.625") L x 44 mm (1.75") W x 91 mm (3.58") H

Housing:
- Case: ULTEM®* (FDA approved) Optional: NORYL®* (USDA-Dairy 3A Sanitary Standards compliant)
- Transducer Face: Silicone rubber (FDA approved) Optional: Fluorosilicone rubber
- Sensor Cable: PVC jacket
- LED: Polycarbonate

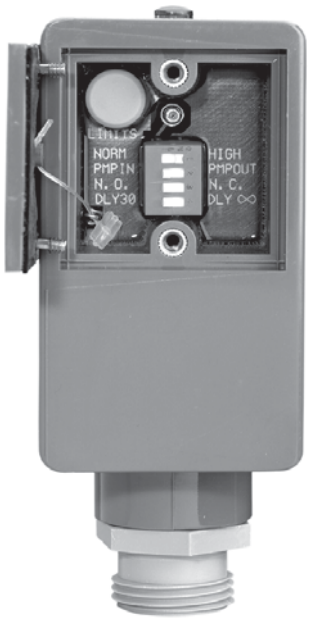
SUPERPROX® Ultrasonic Dual-Level Sensors

- *Easy push-button setup for the specific application*
- *Dual-level on/off latch or dual-level on/off latch with high and low alarm*
- *Non contact sensing range up to 2 m (79")*
- *Epoxy sealed in tough ULTEM® housing*
- *Virtually impervious to the harshest environments*
- *CE certified*
- *AC-powered models ETL listed*



The SUPERPROX® ultrasonic sensors with on/off latch-control output are now available for a wide variety of dual-level control applications. All AC-powered models operate over a 100 to 240 voltage range and there are DC-powered models available with high and low alarm outputs for critical control requirements. The DC models are also available with a sensing range of 2 m (79").

Capable of reliable monitoring and controlling most liquid and granular materials within the level sensing range, these self-contained sensors are typically used in such applications as opening and closing a valve or starting and stopping a pump.

This ultrasonic sensor series (Model SM502 through Model SM572) offers easy setup, dependable operation, and compatible integration with most programmable logic controllers. Each sensor is epoxy sealed to withstand harsh, wet, messy, dusty, and dirty environments typically associated with level-control applications. The SUPERPROX® housings meet NEMA 4X (indoor use only) and IP67 industry standards. A Dairy 3A approved housing is available as an option.

Introduction

Hyde Park's self-contained, SUPERPROX®, dual-level sensors are capable of monitoring and controlling most nonhazardous liquid or dry material levels within a sensing range of either 51mm to 1 m (2 to 39") or 120 mm to 2 m (4.7 to 79"). An ON/OFF latched output is provided by the sensor relative to two level limit set points. The output is used for controlling material levels in tanks, hoppers, reservoirs, etc. as well as loop levels or tension on web processing lines.

These dual-level sensor models are available in three basic operating functions, each of which offers one or more options. The Model Reference Guide on the next page lists and identifies the three functions and options under "Functionality".

The specific description of each function can be found under these suffixes on the following pages.

Control Compartment

A unique feature available to the user of these sensors is the facility to quickly set them up for a specific application. These sensors are configured through two to four slide switches and one to two push-buttons located inside the watertight control compartment on the sensor. The control compartment for each of the three operating functions is illustrated on the following pages.

To access the control compartment, remove the small square cover on the back of the sensor. Simply loosen the two flat-head cover screws and insert a small blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor.

Sensor Limits Setup Push-button

First, during installation, make sure the sensor face is as parallel as possible to the surface of the material being detected.

To set the level limits, simply place an object at the desired distance from the sensor for one limit and press the LIMITS push-button once. This sets the first limit. While the LIMITS push-button is depressed, the multicolored LED, located on top of the sensor, is amber. Upon release of the push-button, the LED flashes amber indicating that the second limit needs to be set. Place an object at the desired position for the second limit and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED flashes amber momentarily and then turns green to indicate acceptance of both limits. At the same time, the sensor output switches from an inactive to active state, placing the sensor in the operational mode, ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

If in setting either level limit the echo from the object is too weak or distorted, the LED flashes red for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again, being careful to keep the object surface parallel to the face of the sensor.

Minimum allowed distance between limits is 13 mm (1/2"). The multicolored LED flashes red after the press and release of the LIMITS push-button for the second limit setting if the distance between the limit settings is less than 13 mm. The multicolored LED continues flashing red either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds have elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 10 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.

Model Reference Guide - SM502 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM5 0 2 A - 1 73 - LE N R 4**

SUPERPROX® Product Series

Power/Connection Type
0...12 to 24 VDC / cable style
2...100 to 240 VAC / cable style (no alarm)
5...12 to 24 VDC / connector style
7...100 to 240 VAC / connector style (no alarm)

Sensing Function
2...Proximity - dual level

Design Level
A...Applies to all DC-powered models
B...Applies to all AC-powered models

Sensing Range
1...51 to 1 m (2 to 39")
4...120 mm to 2 m (4.7 to 79")

Functionality
00...ON/OFF Latch control
14...ON/OFF Delay latch control
19...ON/OFF Delay latch control / default window: +0/-.25"
20...ON/OFF Latch control / Fast response: 20 ms ON/OFF response
44...ON/OFF Latch control / default window: ±0.100"
72...ON/OFF Latch control with dual alarms** / default window: ±0.25", delay 30 sec or × with switch selectable setup
73...ON/OFF Latch control with dual alarms**
74...ON/OFF Latch control with dual alarms** / default window: ±0.125"
76...ON/OFF Latch control with dual alarms** / inverted NPN output

Special Features
... No letter indicates standard sensor with no special features
LE... No change in output on loss of echo
FS... Fluorosilicone transducer face
AA... Remote limit setup (Available on cable models only.)
AB... RS232, 4-digit/2-decimal place output (Available on cable models only.)
AD... Limits push-button disabled
AE... RS232, 5-digit/3-decimal place output (Available on cable models only.)
AF... No LEDs

Housing Types
...No letter indicates standard ULTEM®* plastic housing
N...NORYL®* Dairy 3A gray plastic housing

Remote Type
...No letter indicates standard coupler
R...Right-angle sensing head with armor cable
S...Straight sensing head with armor cable

Remote Cable Length
...No number indicates standard coupler
1 ...254 mm (10")
2 ...508 mm (20")
3 ...762 mm (30")
4 ...1016 mm (40")
Armored (standard) or PVC cable (specify P after number)
5P...1270 mm (50")
6P...1524 mm (60")
Available in PVC cable only

* ULTEM® and NORYL® are registered trademarks of The General Electric Company.

** Alarms available on DC-powered models only.

NOTE: SM522 and SM572 AC models carry the ETL safety label

Loss of Echo

Loss of echo occurs when the sensor does not receive echoes from an object within its sensing range for more than one second. When this occurs, the sensor's output automatically switches OFF. When the sensor again receives echoes from a level, the output will either switch or remain in the same state depending on where the echoes are received relative to the level control limits.

"LE" Option

The LE suffix in the Model Reference Guide indicates an available option for users who do not prefer the standard response to loss of echo. With the LE option, when loss of echo occurs for more than one second, there is no change in the output state of the sensor. When the sensor again receives echoes, the output assumes the state relative to the control limit set points.

Function "00", "20", "44" ON/OFF Latch Control

This dual-level sensor function allows two level limits, high and low, within which the level of product is to be controlled. As the product level moves above the high limit or below the low limit, the sensor output switches state and latches either ON or OFF to, for example, close or open a valve and stop or run a pump. The output remains latched in the ON or OFF state until the product level moves back beyond the other limit, at which time the output switches state.

Function "00", "20", "44" Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing smooth liquid or solid material levels. Place the switch in the HIGH position for sensing turbulent liquid levels and soft or porous material that will deflect or absorb some of the ultrasonic energy.

Switch 2 configures the sensor output to perform either a pump in or pump out control function. Place this switch in the PMPIN position to control the filling process and prevent an overflow of a vessel. Place the switch in the PMPOUT position to control an emptying process and prevent the complete drawdown of a vessel.

Pump-In Mode When the level moves below the low limit, the sensor output switches state and latches, starting a pumping process. The sensor output does not change state until the level moves back above the high limit to stop the pumping process.

Pump-Out Mode When the level moves below the low limit, the sensor output switches state and latches, stopping a pumping process. The sen sor output does not change state until the level moves back above the high limit to restart the pumping pro cess.

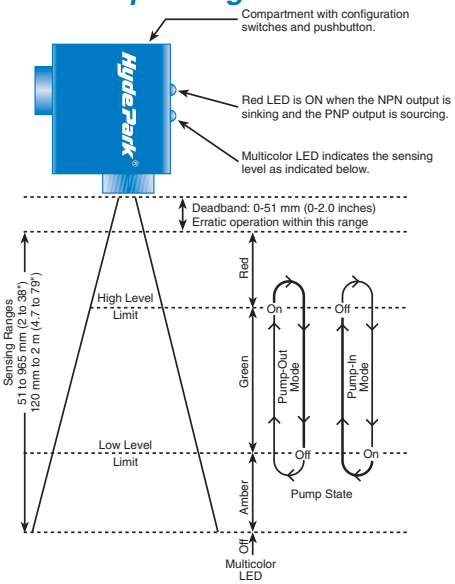
Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 selects the allowable time for setting the high and low limits. If the switch is in the DLY 30 position, the allowed setup time is 30 seconds. If the switch is in the DLY position, the setup time is infinite.

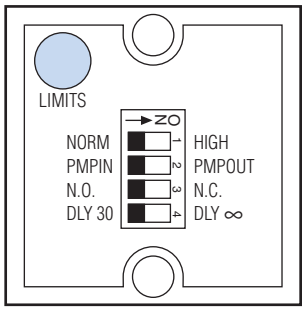
Function "14", "19", On/Off Delay Latch Control

This function operates the same as described for the Function "00", "20", and "44" models, with one exception. The Function "14" and "19" models allow programmable on/off delay time adjustments of the sensor output. As the level moves above the high limit or below the low limit, the sensor output switches and latches either on or off, following the programmed delay time, in performing the required control function. As the level moves back beyond the limit, the output switches and latches back to its other state following, again, the programmed delay time in performing the required control function.

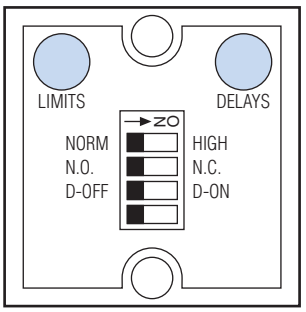
Sensor Operating Profile



Function "00", "20", "44" Control Compartment



Function "14", "19" Control Compartment



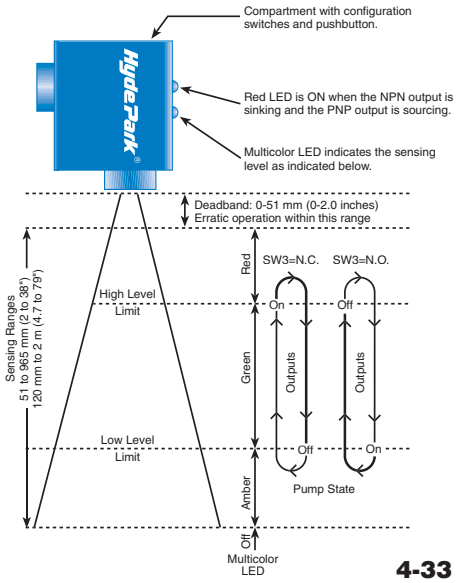
Function "14", "19" Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing smooth liquid or solid material levels. Place the switch in the HIGH position for sensing turbulent liquid levels and soft or porous material that will deflect or absorb some of the ultrasonic energy.

Switch 2 selects the operating mode for the sensor output to be either normally open (N.C. is pump out) or normally closed (N.O. is pump in).

Switch 3 selects the delay time program mode for setting the desired ON and OFF delay times through the DELAYS push-button. See Delay Time Setup for switch operation.

Switch 4 is not used.



Delay Time Functions

The ON delay time prevents the sensor output state from immediately switching active when the sensor starts sensing the level outside that respective level limit set point. The output switches active only after the sensor has continued sensing the level outside that respective level limit set point for the entire ON delay time period.

The OFF delay time prevents the sensor output state from immediately switching inactive when the sensor starts sensing the level outside that respective level limit set point. The output switches inactive only after the sensor has discontinued sensing the level outside that respective level limit set point for the entire OFF delay time period.

Delay Time Setup

Place Switch 3 in the D-OFF position for setting the desired OFF delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Place Switch 3 in the D-ON position for setting the desired ON delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Resetting Delay Times

Place Switch 3 in the D-OFF position and press the DELAYS push-button two successive times for resetting the OFF delay time to the minimum response time. Perform the same process with Switch 3 in the D-ON position for resetting the ON delay time to the minimum response time. The multicolored LED indicator on the sensor momentarily flashes green after the second release of the DELAYS push-button to acknowledge the delay time has been reset to the minimum response time.

Function "72", "73", "74", "76" On/Off Latch Control with Dual Alarms

This dual-level, on/off latch-control sensor function is, again, similar in operation to the Function "00", "20", and "44" sensors in that it also allows two level limits, a high and low, within which the level of product is to be controlled. An added feature enables the user to set two discrete alarm set points anywhere within the sensing range where alarm outputs are required to protect the equipment from potential damage.

This function is only available in DC-powered models having current sinking, NPN outputs. Current sourcing, PNP outputs are not available.

Function "72", "73", "74", "76" Sensor Configuration Switches

Switch 1 configures the sensor output to perform either a pump in or pump out control function. Place the switch in the PMPIN position to control the filling process and prevent an overflow of a vessel. Place the switch in the PMPOUT position to control an emptying process and prevent the complete drawdown of a vessel.

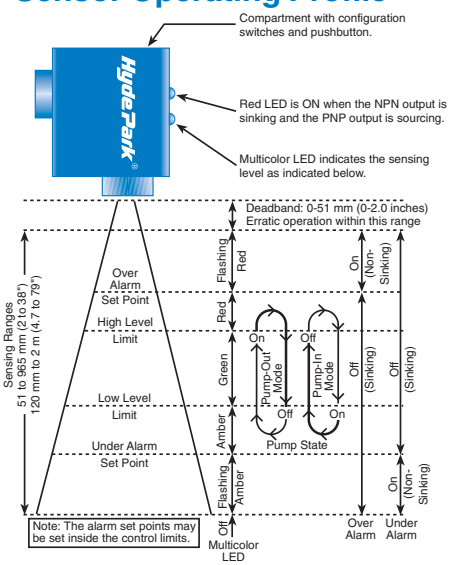
Pump-In Mode When the level moves below the low limit, the sensor output switches state and latches, starting a pumping process. The sensor output does not change state until the level moves back above the high limit to stop the pumping process.

Pump-Out Mode When the level moves below the low limit, the sensor output switches state and latches, stopping a pumping process. The sensor output does not change state until the level moves back above the high limit to restart the pumping process.

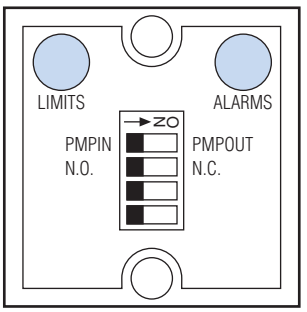
Switch 2 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 3 and **Switch 4** are not used.

Sensor Operating Profile



Sensor Operating Profile Function "72", "73", "74", "76" Control Compartment



Dual-Alarm Outputs

The dual-alarm outputs in the Function "72", "73", "74", and "76" sensors operate in a fail-safe manner. The alarms are normally ON, conducting or sinking, with the level inside both alarm limits. For example, the high alarm output switches OFF when the level rises above the high alarm limit. Conversely, the low alarm switches OFF when the level drops below the low alarm limit.

Loss of Echo and the "LE" Option

Like the outputs of the other dual-level sensors, the dual-alarm outputs in the Function "72", "73", "74", and "76" sensors also switch OFF with a loss of echo condition. Upon echo restoration, both alarm outputs switch ON when the level is inside both alarm limits. Should the level be outside one of the alarm limits, that alarm output will remain OFF.

With the "LE" option, when loss of echo occurs for more than one second, there is no change in either the control level or alarm level output states of the sensor. When the sensor again receives echoes from within its sensing range, those outputs assume the state relative to the control and alarm limit set points.

Multicolored LED Indicator During Alarm Setup Mode for Function "72", "73", "74", and "76" Sensors

Press and release the ALARMS push-button with the level at the desired low alarm limit.

- Flashing Amber - Low alarm limit is set.

Press and release the ALARMS push-button with the level at the desired high alarm limit.

- Flashing Red - High alarm limit is set.

IMPORTANT: When either one of the alarm limits is reset for a different level, the other alarm limit must also be reset.

Multicolored LED Indicator in Operational Mode for Function "72", "73", "74", and "76" Sensors

There are four possible setup mode combinations for setting where the alarm level outputs are inactive with respect to the control level output. The table below illustrates the LED status colors for all four alarm limit setup combinations.

Electrical Wiring

Sensor wires must be run in conduit free of any AC power or control wires.

Sensor Wire Colors

DC Models, 4-Conductor

	Cable Style	Connector Style
(+) 12 to 24 VDC	RED	BROWN
NPN/Sinking Output	WHITE	BLACK
PNP/Sourcing Output	GREEN	WHITE
Common	BLACK	BLUE

DC Models, 5-Conductor

(+) 12 to 24 VDC	RED	BROWN
Control Level, NPN/Sinking Output	WHITE	BLACK
Low Alarm Level NPN/Sinking Output	BROWN	ORANGE
High Alarm Level NPN/Sinking Output	GREEN	WHITE
Common	BLACK	BLUE

AC Models, 4-Conductor

100 to 240 VAC	BROWN	BROWN
Switch Line Side	BLACK	BLACK
Switch Load Side	WHITE	WHITE
Neutral	RED	BLUE

Setup Combination 1:

High Alarm Level — Flashing Red
High Control Level — Red
Low Control Level — Green
Low Alarm Level — Amber
Flashing Amber

Setup Combination 2:

High Control Level — Flashing Red
High Alarm Level — Flashing Red
Low Alarm Level — Green
Low Control Level — Flashing Amber

General Specifications

Sensing

Ranges:
51 to 1 m (2 to 39")
120 mm to 2 m (4.7 to 79" - DC Model only)
Sonic Frequency: 200 kHz

Power Requirements

DC Models:
12 to 24 VDC ± 10% @ 80 mA, 2 W max., excluding output load (regulated supply)
AC Models:
100 to 240 VAC, 50/60 Hz, @ 30 mA, 7.5 VA max., excluding load

Outputs

DC Models:
NPN Sinking: Switch selectable N.O./N.C.
Sinking on-state voltage drop:
Maximum 0.25 volts @ 60 mA
Sinking load current:
Maximum 100 mA
Sinking output voltage:
Maximum applied 30 VDC
PNP Sourcing: Switch selectable N.O./N.C.
Sourcing output current: Maximum 100 mA
Current limit protected to less than 160 mA
AC Models: Triac, switch selectable N.O./N.C.
Maximum continuous load current: 1 Amp
Maximum applied output voltage: 260 VAC
Maximum off-state leakage current: less than 50 µA (100% PLC/AC input interface compatibility)

Response Time

"On" 200 ms, "Off" 200 ms to
"On" 400 ms, "Off" 400 ms, depending upon model

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates limits setup and operational modes
Red LED: Visual indicator for sensor output; illuminated when output is in an active (on) state

Connections

Cable Style Models:
DC: 24 AWG, PVC jacket,
4- or 5-conductor, 3 meters (10') long, standard
AC: 20 AWG, PVC jacket,
4-conductor, 3 meters (10') long, standard
Connector Style Models:
DC: 4- or 5-pin "mini" style
AC: 4-pin "mini" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity, fuse on AC Model
Outputs: current-limited over voltage, ESD, over-current, fused TRIAC on AC Model

Environmental

Operating Temperature Range:
0° to 50°C (32° to 122°F)
Storage Temperature Range: -40° to 100° C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61010-1: 1990 including amend. No.1:1992
EN55011 Group 1 Class A, EN50082-1.
Declaration of conformity available upon request
AC Models SM522/572 carry the ETL safety label.

Construction

Dimensions (overall)
92 mm (3.625") L x 44 mm (1.75") W x 91 mm (3.58") H
Housing:
Case: ULTEM®* (FDA approved)
Optional: NORYL®* (USDA-Dairy 3A Sanitary Standards compliant)
Transducer Face: Silicone rubber (FDA approved)
Optional: Fluorosilicone rubber
Sensor Cable: PVC jacket
LED: Polycarbonate

* ULTEM® and NORYL® are registered trademarks of The General Electric Co.

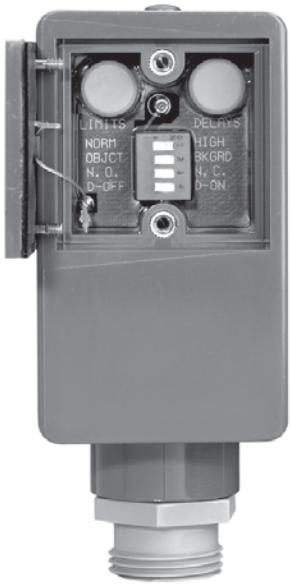
Model SM503 Series

SUPERPROX® Ultrasonic Proximity Sensors

On/Off Delay Sensing

- **Easy push-button setup for the specific application**
- **Programmable On/Off delay**
- **Non-contact sensing range up to 2 m (79")**
- **Sensing limits and time delay(s) stored in non-volatile memory**
- **Epoxy sealed in tough ULTEM® housing**
- **Virtually impervious to the harshest environments**
- **CE certified**
- **AC-powered models ETL approved**



The versatile time-delay and sensing window setup features of the SUPERPROX® Model SM503 series of Hyde Park ultrasonic, proximity sensors are as easy as pressing a door bell.

Now available in either AC or DC power, the SM503 series is intended for applications requiring reliable detection of objects and a delay of the output signal. Applications include jam and gap detection of all types of containers, even clear glass and P.E.T.

A convenient push-button in the rear control compartment gives the user the ability to quickly program when and how long the sensor output is delayed in switching to either the on or off state, or both. Once set, the sensor remains set with no periodic adjustments required.

Like other SUPERPROX® sensors, this series has a push-button for quickly setting the window limits within which the object is to be detected. These sensors are sealed for reliable sensing in harsh, wet, or dirty environments typically associated with many conveyor line, machine, and other automatic control sensing applications. The housing meets NEMA 4X (indoor use only) and IP67 industry standards. A Dairy 3A compliant housing is available as an option.

Control Compartment

A unique feature available to the user of these sensors is the ability to quickly set up each sensor for a specific application. The sensor is configured through four slide switches and two push-buttons (See Figure 1) located inside a watertight control compartment on the sensor. To access the controls, remove the small square cover on the back of the sensor. Simply loosen the two flathead cover screws and insert a small-blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor. NOTE: The switch settings may require changing for the intended application.

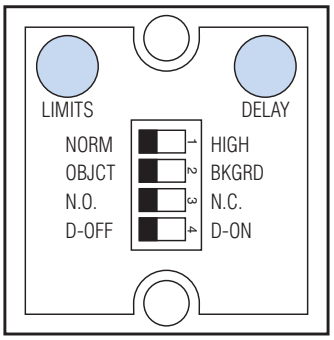


Figure 1

Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing liquid or solid materials. Place the switch in the HIGH position for sensing soft or porous materials that will absorb some of the ultrasonic energy.

Switch 2 configures the sensor to operate in either an object or background sensing mode. Place this switch in the OBJCT position to perform a sensing function for receiving the reflected ultrasonic energy directly off an object. Place this switch in the BKGRD position to perform a break-beam sensing function for receiving the reflected ultrasonic energy directly off a fixed background target.

Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 selects the delay time program mode for setting the desired ON and OFF delay times through the DELAYS push-button. See Delay Time Setup for switch operation.

Delay Time Functions

The ON delay time prevents the sensor output state from immediately switching active when the sensor starts sensing an object inside the set window limits. The output switches active only after the sensor has continued sensing the object inside the set window limits for the entire ON delay time period.

The OFF delay time prevents the sensor output state from immediately switching inactive when the sensor stops sensing an object inside the set window limits. The output switches inactive only after the sensor has discontinued sensing the object inside the set window limits for the entire OFF delay time period.

Delay Time Setup

Place Switch 4 in the D-OFF position for setting the desired OFF delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Place Switch 4 in the D-ON position for setting the desired ON delay time. Press the DELAYS push-button for the length of the desired delay time. The multicolored LED indicator on the sensor momentarily flashes green after release of the DELAYS push-button to acknowledge the delay time has been set into the nonvolatile memory of the sensor.

Model Reference Guide - SM503 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM5 0 3 A - 1 00 - FS R 2**

SUPERPROX® Product Series

Power/Connection Type
0...12 to 24 VDC / cable style
2...100 to 240 VAC / cable style
5...12 to 24 VDC / connector style
7...100 to 240 VAC / connector style

Sensing Function
3...Proximity - on/off delay

Design Level
A...Applies to all DC-powered models
B...Applies to all AC-powered models

Sensing Range
0...51 to 635 mm (2 to 25")
1...51 to 1m (2 to 39")
4...120 mm to 2 m (4.7 to 79")

Functionality
00...Standard proximity
15...Default window: ±1"
17...Special delay: 250 ms increment
25...Default window: +0.1"/-0.25"
44...Default window: ±0.1"
49...Special delay: 5 ms increment
91...Default window: ±0.05"

Special Features
... No letter indicates standard sensor with no special features
FS...Fluorosilicone transducer face
AA...Remote limit setup (Available on DC cable models only.)
AB...RS232, 4-digit/2-decimal place output (Available on cable models only.)
AD...Limits push-button disabled
AE...RS232, 5-digit/3-decimal place output (Available on cable models only.)
AF...No LEDs

Housing Types
...No letter indicates standard ULTEM®* plastic housing
N...NORYL®* Dairy 3A gray plastic housing

Remote Type
...No letter indicates standard coupler
R...Right-angle sensing head with armor cable
S...Straight sensing head with armor cable

Remote Cable Length
...No number indicates standard coupler
1...254 mm (10")
2...508 mm (20")
3...762 mm (30")
4...1016 mm (40")
Armored (standard) or PVC cable (specify P after number)
5P...1270 mm (50")
6P...1524 mm (60")
Available in PVC cable only

Resetting Delay Times

Place Switch 4 in the D-OFF position and press the DELAYS push-button two successive times for resetting the OFF delay time to the minimum response time. Perform the same process with Switch 4 in the D-ON position for resetting the ON delay time to the minimum response time. The multicolored LED indicator on the sensor momentarily flashes amber after the second release of the DELAYS push-button to acknowledge the delay time has been reset to the minimum response time.

Sensor Limits Setup Push-button

First, during installation, make sure the sensor face is as parallel as possible to the surface of the material being detected.

To set the limits, simply place an object at the desired distance from the sensor for one limit and press the LIMITS push-button once. This sets the first limit and switches the sensor output to an inactive state during the limit setup. While the LIMITS push-button is depressed, the multicolored LED, located on top of the sensor, is amber. Upon release of the push-button, the LED flashes amber indicating that the second limit needs to be set within 30 seconds. Place an object at the desired position for the second limit and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED flashes amber momentarily and then turns green to indicate acceptance of both limits. If 30 seconds elapse before the second limit is set, the limits revert back to the previous settings.

At the same time, the sensor output switches from the inactive to the active state, placing the sensor into the operational mode, ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

If in setting either limit the echo from the object is too weak or distorted, the LED flashes RED for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again, being careful to keep the object surface parallel to the face of the sensor.

Minimum allowed distance between any two setup limits is 13 mm (1/2"). The multicolored LED flashes RED after the press and release of the LIMITS push-button for the second limit setting if the distance between the limit settings is less than 13 mm. The multicolored LED continues flashing RED either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds have elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 30 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.

A special feature provides an automatic 13 mm (1/2") window limits setup function. Simply place an object within the sensing range of the sensor and press the LIMITS push-button twice in succession without moving the object. A limit is set on a line 1/4" in front and back of the object surface nearest the sensor.

Multicolored LED Indicator During Limit Setup

Prior to pressing LIMITS push-button

- Off - Sensing no object or object is outside the sensing range
- Red - Sensing an object out side the set limits
- Green - Sensing an object inside the set limits

LIMITS push-button depressed for first time

- Amber - Sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for first time

- Flashing Amber - First limit accepted, waiting for second limit
- Flashing Red - First limit not accepted; retry setting limit

LIMITS push-button depressed for second time

- Amber - Sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for second time

- Green or Red - Second limit accepted
- Green or Amber - Second limit accepted
- Flashing Red - Second limit not accepted; retry setting both limits

Multicolored LED Indicator in Operational Mode

- Off - Sensing no object or object is outside the sensing range
- Red - Sensing as object outside the set limits
- Green - Sensing an object inside the set limits

Red LED Indicator in Operational Mode

The red LED serves as a visual indicator for the sensor output. The LED is illuminated when the output is in an active (ON) state. Note: Indicator is not provided on all models.

Electrical Wiring

Sensor wires must be run in conduit free of any AC power or control wires.

Sensor Wire Colors

DC Models	Cable Style	Connector Style
+12 to 24 VDC	RED	BROWN
NPN/Sinking Output	WHITE	BLACK
PNP/Sourcing Output	GREEN	WHITE
Common	BLACK	BLUE

AC Models*		
100 to 240 VAC	BROWN	BROWN
Switch Line Side	BLACK	BLACK
Switch Load Side	WHITE	WHITE
Neutral	RED	BLUE

***WARNING**

Not all cables are alike. Verify that connector pin outs and cable conductor colors match up with the wiring illustrations shown in the operating instructions.

Outputs

DC Models:
NPN Sinking: Switch selectable N.O./N.C.
Sinking on-state voltage drop:
Maximum 0.25 volts @ 60 mA
Sinking load current:
Maximum 100 mA
Sinking output voltage:
Maximum applied 30 VDC
PNP Sourcing: Switch selectable N.O./N.C.
Sourcing output current:
Maximum 100 mA
Current limit protected to less than 160 mA
AC Models:
TRIAC, switch selectable N.O./N.C.
Maximum continuous load current: 1 Amp
Maximum applied output voltage: 260 VAC
Maximum off-state leakage current: less than 50 µA (100% PLC/AC input interface compatibility)

Response Time

"On" 10 ms, "Off 10 ms to
"On" 30 ms, "Off" 30 ms, depending upon model

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates limits setup and operational modes
Red LED: Visual indicator for sensor output;
Illuminated when output is in an active (on) state

Connections

Cable Style Models:
DC: 24 AWG, PVC jacket,
4-conductor, 3 meters (10') long, standard
AC: 20 AWG, PVC jacket,
4-conductor, 3 meters (10') long, standard
Connector Style Models:
DC: 4-pin "mini" style
AC: 4-pin "mini" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity, fused on AC model
Outputs: current-limited over voltage, ESD, over-current, fused TRIAC on AC model

Environmental

Operating Temperature Range:
0° to 50°C (32°F to 122°F)
Storage Temperature Range: -40°C to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61010-1: 1990 including amend. No.1:1992
EN55011 Group 1 Class A, EN50082-1.
Declaration of conformity available upon request
AC Models SM520/570 carry the ETL safety label.

Construction

Dimensions (overall)
92 mm (3.625") L x 44 mm (1.75") W x 91 mm (3.58") H
Housing:
Case: ULTEM®* (FDA approved)
Optional: NORYL®* (USDA-Dairy 3A Sanitary Standards compliant)
Transducer Face: Silicone rubber (FDA approved)
Optional: Fluorosilicone rubber
Sensor Cable: PVC jacket
LED: Polycarbonate

Model SM504 Series

SUPERPROX® Ultrasonic Proximity Sensors

Synchronized/ Gate-controlled Sensing

- *Allows sensors to operate in close proximity*
- *Detects objects at specific points within adjustable "window" limits*
- *Makes profiling and positioning applications possible*
- *A push-button sets window limits*
- *Operating range up to 2 m (79")*
- *CE certified*

Sensing full or empty case conditions is greatly simplified with these SUPERPROX® sensor models. Other typical applications include sensing height differentiation, detecting object surfaces in specific areas, and performing on-demand and automation-control sensing functions.

The SUPERPROX® Model SM504B (cable style) and Model SM554B (connector style) series of ultrasonic, proximity sensors, when used in a set, provide for external control of the pulsing of all the sensors. A setup switch in these sensors, designated "Master" and "Slave," selects the operating technique to either simultaneously synchronize or gate the transmit and receive cycles of a multiple sensor set. This unique concept is an effective solution for applications such as: full or empty case inspecting, on-demand controlled sensing or inspecting, in-case container counting, automation control sensing, object-in-area sensing, down container sensing, differential height inspecting, and more.

The synchronized technique is designed for applications requiring continuous "curtain" sensing over a wide area. Synchronized sensing allows any number of sensors to be operating close together, thus eliminating any possible adverse ultrasonic signal interference between the sensors.

Controlled or multiplexed sensing of multiple objects, locations or surfaces is accomplished using the gated technique. With this technique, PLS and PLC output switches or other sensing devices may be used to trigger or gate a sensor set. Depending on the applications, a set of these sensors is used with an isolated switching device to prevent possible false sensor outputs due to changing foreground object conditions.

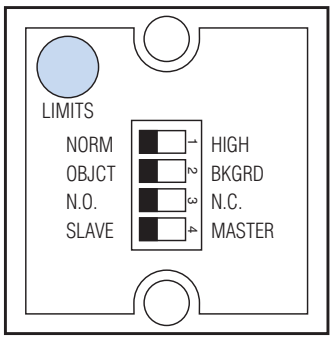
Like other SUPERPROX® sensors, these models have the capability to detect objects at specific points within adjustable "window" limits, thus making profiling and positioning applications possible. A push-button sets the window limits. The sensors carry the CE Mark and are epoxy sealed in a tough plastic housing to resist harsh, wet, or dirty environments typically associated with the above applications. The housing meets NEMA 4X (indoor use only) and IP67 industry standards. A Dairy 3A compliant housing is available as an option. These sensors have operating ranges of 51 to 635 mm (2 to 25"), 51 to 1 m (2 to 39") and 120 mm to 2 m (4.7 to 79") and are available in 12 to 24 VDC model versions.

Control Compartment

A unique feature available to the user of these sensors is the ability to quickly set up each sensor for a specific application. The sensor is configured through four slide switches and a push-button

(See Figure 1) located inside a water-tight control compartment on the sensor. To access the controls, remove the small square cover on the back of the sensor. Simply loosen the two flat-head cover screws and insert a small-blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor. NOTE: The switch settings may require changing for the intended application.

Figure 1



Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a normal or high sensitivity mode. Place this switch in the NORM position for sensing liquid or solid materials. Place the switch in the HIGH position for sensing soft or porous materials that will absorb some of the ultrasonic energy.

Switch 2 configures the sensor to operate in either an object or background sensing mode. Place this switch in the OBJCT position to perform a sensing function for receiving the reflected ultrasonic energy directly off an object. Place this switch in the BKGRD position to perform a break-beam sensing function for receiving the reflected ultrasonic energy directly off a fixed background target.

Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 configures the sensor to perform either a slave or master operating function. See Synchronized Sensing and Gate-controlled Sensing descriptions for selecting the proper switch position.

Synchronized Sensing

Synchronized sensing is a unique feature of this sensor that enables reliable "curtain" sensing or inspecting over a wide area by using multiple sensors in a set. Synchronized sensing allows these sensors to be operated close together, thus eliminating any possible adverse ultrasonic signal interference between the sensors.

Any number of these sensors can be operated together to perform a synchronized sensing function. It is accomplished by simply connecting together the external control wire lead from all the sensors in the set as shown in the illustration on the next page. One of the connected sensors must operate with setup Switch 4 in the "Master" position and the other connected sensors must operate with setup Switch 4 in the "Slave" position. The designated "Master" sensor continuously synchronizes the transmit and receive cycles of all the connected sensors as a result of this configuration.

Model Reference Guide - SM504 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM5 5 4 B - 4 00 - AF**

SUPERPROX® Product Series

Power/Connection Type (DC only)
0...12 to 24 VDC / cable style
5...12 to 24 VDC / connector style

Sensing Function
4...Proximity - Synchronized/Gate-controlled

Design Level
A…Applies to discontinued models with NPN sinking output only
B…Applies to models with NPN sinking and PNP sourcing outputs

Sensing Range
0...51 to 635 mm (2 to 25")
1...51 to 1 m (2 to 39")
4...120 mm to 2 m (4.7 to 79")

Functionality
00...Standard Proximity
05...Default Window: ±0.5"
44...Default Window: ±0.1"
67...Switch selectable, 1 or 2 echo hit recognition with high gain

Special Features
...No letter indicates standard sensor with no special features
FS...Fluorosilicone transducer face
AA...Remote limit setup (Available on DC cable models only.)

Gate-controlled Sensing

Gate-controlled sensing is another unique feature that enables this sensor to perform periodic sensing of multiple objects or locations. Depending on the application, one or a set of these sensors is used with an isolated switching device for preventing possible false sensor outputs due to changing foreground object conditions. Devices such as SUPERPROX® sensors, programmable limit switches or other proximity sensor switches with an open-collector, current sinking output are typically used to perform the isolated gate-switch or "Master" sensor function.

Gate-controlled sensing is accomplished by connecting the external control wire lead from each sensor to the DC supply voltage common through the isolated switch as shown in the illustration on the next page. Each connected sensor must operate with setup Switch 4 in the "Slave" position. In this configuration, the sensors simultaneously transmit and receive ultrasonic energy only when the gate device is switched to the ON or CLOSED state. When the gate device is switched back to the OFF or OPEN state, the sensor outputs are latched from changing state until the next gate-switch cycle.

Sensor Limits Setup Push-button

First, during installation make sure the sensor face is as parallel as possible to the surface of the material being detected.

To set the limits, simply place an object at the desired distance from the sensor for one limit and press the LIMITS push-button once. This sets the first limit and switches the sensor output to an inactive state during the limit setup. While the LIMITS push-button is depressed, the multicolored LED located on top of the sensor, is amber. Upon release of the push-button, the LED flashes amber indicating that the second limit needs to be set within 30 seconds. Place an object at the desired position for the second limit and press the LIMITS push-button once. Again while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED flashes amber momentarily and then turns green to indicate acceptance of both limits. If 30 seconds elapse before the second limit is set, the limits revert back to the previous settings.

At the same time, the sensor output switches from the inactive to the active state, placing the sensor into the operational mode, ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

If in setting either limit the echo from the object is too weak or distorted, the LED flashes RED for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again, being careful to keep the object surface parallel to the face of the sensor.

Minimum allowed distance between any two setup limits is 13 mm (1/2"). The multicolored LED flashes RED after the press and release of the LIMITS push-button for the second limit setting if the distance between the limit settings is less than 13 mm. The multicolored LED continues flashing RED either until the LIMITS push-button is pressed and released once for the first limit setting or until 10 seconds have elapsed. Pressing and releasing the LIMITS push-button once reinitiates the limit setup sequence. If 10 seconds elapse before the LIMITS push-button is pressed and released for the second limit setup, the limits revert back to the previous settings.

A special feature provides an automatic 13 mm (1/2") window limits setup function. Simply place an object within the sensing range of the sensor and press the LIMITS push-button twice in succession without moving the object. A limit is set on a line 1/4" in front and back of the object surface nearest the sensor.

Multicolored LED Indicator During Limit Setup

Prior to pressing LIMITS push-button:

- Off - Sensing no object or object is outside of the sensing range
- Red - Sensing an object out side the set limits
- Green - Sensing an object inside the set limits

LIMITS push-button depressed for first time:

- Amber - sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for first time:

- Flashing Amber - First limit accepted,waiting for second limit
- Flashing Red - First limit not accepted; retry setting limit

LIMITS push-button depressed for second time:

- Amber - Sensing a good object surface condition
- Red - Sensing no object or a poor object surface condition

LIMITS push-button released for second time:

- Green or Red - Second limit accepted
- Green or Amber - Second limit accepted
- Flashing Red - Second limit not accepted; retry setting both limits

Multicolored LED Indicator in Operational Mode

- Off - Sensing no object or object is outside the sensing range
- Red - Sensing as object outside the set limits
- Green - Sensing an object inside the set limits

Red LED Indicator in Operational Mode

The red LED serves as a visual indicator for the sensor output. The LED is illuminated when the output is in an active (ON) state. Note: Indicator is not provided on all models.

Electrical Wiring

Sensor wires must be run in conduit free of any AC power or control wires.

General Specifications

Sensing

Ranges:
- 51 to 1 m (2 to 39")
- 120 mm to 2 m (4.7 to 79")

Sonic Frequency: 200 kHz

Power Requirements

DC Models:
- 12 to 24 VDC ± 10% @ 80 mA, 2 W max., excluding output load (regulated supply)

Output/Input

DC Models:

NPN Sinking: Switch selectable N.O./N.C.
- Sinking on-state voltage drop: Maximum 0.25 volts @ 60 mA
- Sinking load current: Maximum 100 mA
- Sinking output voltage: Maximum applied 30 VDC

PNP Sourcing: Switch selectable N.O./N.C.
- Sourcing output current: Maximum 100 mA
- Current limit protected to less than 160 mA

Input:
- Input voltage range: 0 to 30 VDC
- Vin-high, minimum: 2.5 V
- Vin-low, maximum: 1.4 V
- Input current maximum: 0.76 mA

Response Time

"On" 10 ms, "Off" 10 ms to "On" 30 ms, "Off" 30 ms, depending upon model

Indicators

Multicolored (Amber, Red, Green) LED: Indicates limits setup and operational modes

Red LED: Visual indicator for sensor output; illuminated when output is in an active (On) state.

Connections

Cable Style Models:
- DC: 24 AWG, PVC jacket, 5-conductor, 3 meters (10') long, standard

Connector Style Models:
- DC: 5-pin "mini" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity

Outputs, Input: current-limited over voltage, ESD, over-current.

Environmental

Operating Temperature Range: 0° to 50°C (32° to 122°F)

Storage Temperature Range: -40° to 100°C (-40° to 212°F)

Operating Humidity: 100%

Protection Ratings: NEMA 4X (indoor use only), IP67

Chemical Resistance: Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to:
- EN61010-1: 1990 including amend. No.1:1992
- EN55011 Group 1 Class A, EN50082-1.

Declaration of conformity available upon request.

Model SM505 Series

SUPERPROX® Ultrasonic Proximity Motion Sensors

Rate & Stopped Motion Sensing

- ***Easy push-button setup for the specific application***
- ***Rate adjustments: Single file, 30 to 1200 CPM; Mass wide, 5 to 200 CPM***
- ***Non contact sensing range up to 2 m (79")***
- ***SUPERPROX® housing meets NEMA 4X and IP67 industry standards***
- ***CE certified***
- ***AC-powered model ETL listed***

In contrast to other jam and gap-type sensors which stop machine processes upon sensing a back-to-back, no-gap condition, this SUPERPROX® microprocessor-based series (Model SM505 through Model SM575) of ultrasonic motion sensors is rate sensitive. Even with a back-to-back, no-gap condition, the operator can, through the use of a rate potentiometer, set the speed below which the output switches off, causing the particular machine under control to stop. Another potentiometer enables the operator to set the time delay desired to restart the particular machine under control once the resumed container speed is at or above the set rate. This time delay feature prevents the output from switching on prematurely when the container movement is momentarily at or above the set rate.

Available in either AC or DC models, these self-contained sensors can be positioned throughout the packaging line and easily configured to automatically control the synchronized starting and stopping of conveyor lines and the starting and stopping of the machines in the system. By allowing the machines to run longer before shutdown due to a line backup, and to start earlier once the movement begins, the result is a smoother, more efficient container handling system.

These sensors can be used in either single-file or mass-wide conveyor operations with all types of containers. As with all SUPERPROX® sensors, a simple push-button is used to set the limits within which the container motion is monitored and detected. In single-file applications, container motion is monitored as soon as a back-to-back, no-gap condition exists. In mass-wide applications, container motion is monitored when a container moves laterally to within 8 in. of the SUPERPROX® sensor.

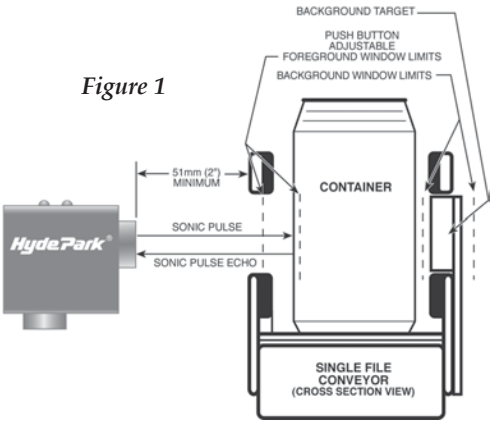
Introduction

This SUPERPROX® sensor series detects the movement of either plastic, glass, or metal containers as small as 38 mm (1-1/2") in diameter on single file and mass conveyors. By using the unique "window" sensing feature with two potentiometers and a background target on the opposite side of the container, movement is reliably detected. The container pass line nearest the sensor and background target are the sensing references respectively for setting a foreground and background sensing window.

Control Compartment

A unique feature available to the user of these sensors is the facility to quickly set up each sensor for a specific motion sensing application. The sensor is configured through three slide switches, two potentiometers, and one push-button (See Figure 2) located inside a water-tight control compartment on the sensor. To access the controls, remove the small square cover on the back of the sensor. Simply loosen the two flat-head cover screws and insert a small-blade screwdriver in either the top or bottom slot to remove the cover. A short plastic tether prevents separation of the cover from the sensor. NOTE: The switch settings may require changing for the intended application.

Figure 1



NOTE: Objects placed within the 51 mm near range will cause erratic operation.

Container Motion Sensing Function

The solid state output in the SUPERPROX container motion sensors switches OFF when a back-to-back line or mass of containers is detected moving below the setting of the RATE potentiometer (See Page 4-55).

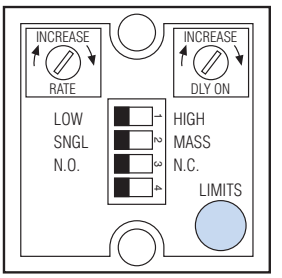


Figure 2

The sensor output switches ON after the back-to-back line or mass of containers has been detected moving at or above the setting of the RATE potentiometer for a delay time period set by the DELAY ON potentiometer (See Page 4-55). The sensor output also switches ON should the background target on the opposite side of the conveyor be detected for the delay time period as a result of containers moving out from between the sensor and background target.

Single-File Conveyor Sensing Mode

The maximum distance between the sensor and background target on the opposite side of a single-file conveyor cannot exceed 254 mm (10"). The overall clearance between the container and conveyor side rails should not be more than 10 mm (3/8"). When a back-to-back line of containers is located between the background target and sensor, the sensor output switches OFF upon detecting container motion either stopped or at a minimum rate (See Figure 3).

Mass Conveyor Sensing Mode

The maximum distance between the sensor and background target on the opposite side of a mass conveyor cannot exceed 1 m (39"). When a mass of containers is within 204 mm (8") or less from the foreground sensing window, the sensor output switches OFF upon detecting container motion either stopped or at a minimum rate (See Figure 4).

Sensor Configuration Switches

Switch 1 configures the sensor to operate in either a low or high sensitivity mode. Place this switch in the LOW position for sensing container motion on single file conveyors. Place the switch in the HIGH position for sensing container motion on mass conveyors.

Switch 2 configures the sensor to detect container motion on either a single file or mass conveyor. Place this switch in the SNGL position for sensing motion on a single file conveyor over a 254 mm (10") sensing range. Place the switch in the MASS position for sensing container motion on a mass conveyor over a 1 m (39") sensing range.

Switch 3 selects the operating mode for the sensor output to be either normally open (N.O.) or normally closed (N.C.).

Switch 4 not used.

Sensor Limits Setup Push-button

First, during installation make sure the sensor face is mounted in line and as parallel as possible with the background target sensing surface on the opposite side of the conveyor. Second, before setting the sensing window limits, adjust the single turn RATE and DELAY ON potentiometers to the fully CCW position.

To set the background and foreground sensing window limits, simply move containers away from between the sensor and background target and press the LIMITS push-button once. This sets the background window limits and switches the sensor output OFF during the limit setup. While the LIMITS push-button is depressed, the multicolored LED located on top of the sensor is amber. Upon release of the push-button, the LED flashes amber indicating that the foreground window limits need to be set within 30 seconds. To set the foreground window limits,

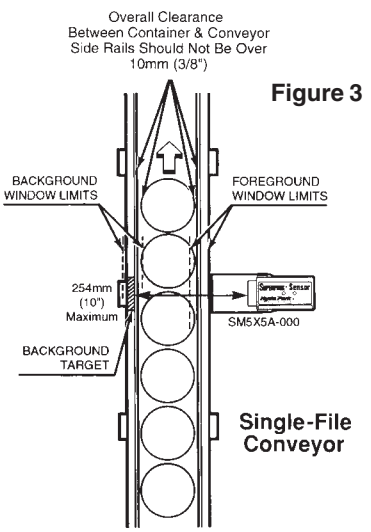

Figure 3

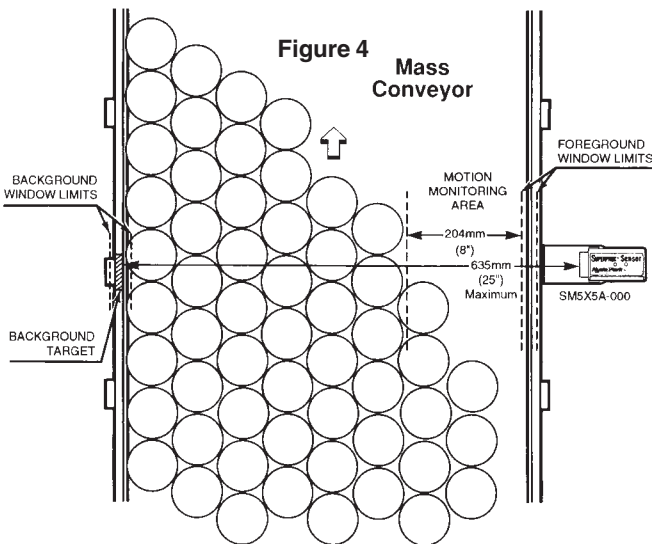

Figure 4

place a container on the conveyor against the rail nearest to the sensor with the main body area directly in front of the sensor and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED turns green indicating the background and foreground window limits have been successfully set. If 30 seconds elapse before the foreground window limits are set, the limits revert back to the previous settings.

At the same time, the sensor output switches from OFF to ON, placing the sensor into the operational mode, ready to use. When power is off or interrupted, the limits are retained in a nonvolatile memory.

The background and foreground window limits can be set up in reverse order. To set the limits in reverse order, place a container on the conveyor against the rail nearest to the sensor with the main body area directly in front of the sensor and press the LIMITS push-button once. This sets the foreground window limits and switches the sensor output OFF during the limit setup. While the LIMITS push-button is depressed, the multicolored LED, located on top of the sensor, is amber. Upon release of the push-button, the LED flashes amber indicating that the background window limits need to be set within 30 seconds. Move containers away from between the sensor and background target and press the LIMITS push-button once. Again, while the push-button is depressed, the LED is amber. Upon release of the push-button, the LED turns red indicating the foreground and background window limits have been successfully set. At the same time, the sensor output switches from OFF to ON, making the sensor operational.

If in setting the limits the echo from either the background target or container is too weak or distorted, the LED flashes red for 10 seconds (or until the button is pressed again) indicating the limit setting was not accepted by the sensor. Attempt to set both limits again with the container and background target surfaces parallel to the face of the sensor.

RATE Adjustment

The RATE potentiometer sets the minimum threshold rate at which the sensor output switches either OFF or ON, depending whether there is a decrease or an increase in the container motion rate. A CW rotation increases the rate setting of the single turn RATE potentiometer. The output switches OFF when containers are moving below the setting of the RATE potentiometer. The output switches ON after container movement resumes at/or above the setting of the RATE potentiometer for a delay-on time period. The rate adjustment range for sensing minimum container motion on single file of mass conveyor is determined by the Switch 2 position. With Switch 2 in the SNGL position, the rate adjustment range is 30 to 1200 CPM (See Figure 5). With Switch 2 in the MASS position, the rate adjustment range is 5 to 200 CPM (See Figure 6). Initially, set the RATE potentiometer fully CCW to the minimum rate position. After the background and foreground sensing window limits have been set, the RATE potentiometer can be adjusted to the appropriate setting by slowly turning the potentiometer CW with containers moving at the optimum line speed in the application.

Rate Potentiometer

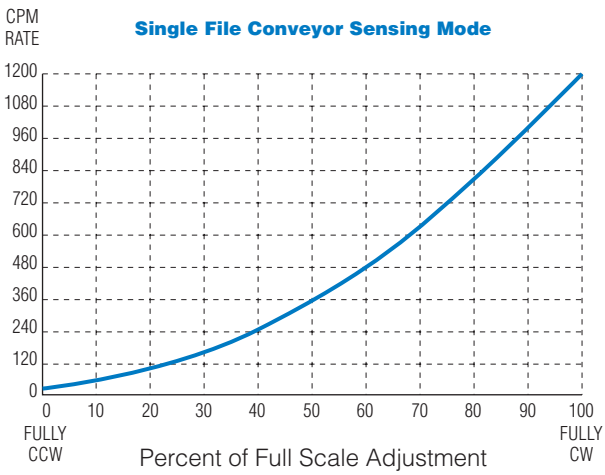

Figure 5

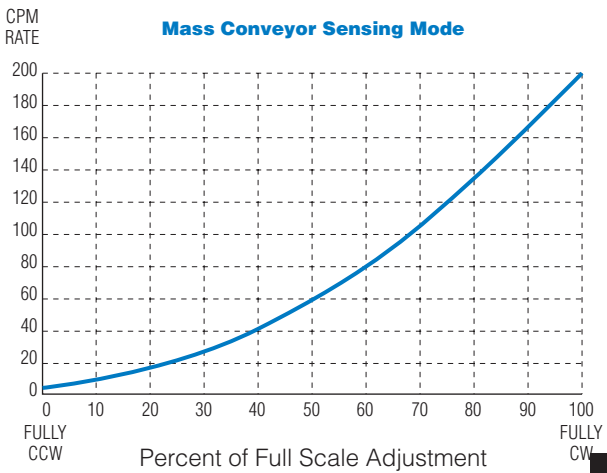

Figure 6

DELAY ON Adjustment

The DELAY ON potentiometer sets the minimum delay time before the output switches from OFF to ON after container movement resumes at or above the setting of the RATE potentiometer. A CW rotation increases the delay setting of the single turn DELAY ON potentiometer. The delay-on adjustment prevents the output from switching ON prematurely when container movement resumes momentarily at or above the setting of the RATE potentiometer. The delay-on time adjustment range is .05 to 10 seconds.

Initially, set the DELAY ON potentiometer fully CCW to the minimum delay-on time position. After the RATE potentiometer has been set, the delay-on time can be set at the DELAY ON potentiometer for the appropriate delay time before the sensor output switches ON in the application.

Multicolored LED Indicator During Limit Setup

Setting Limits For The Background 1st & Foreground 2nd

Prior to pressing LIMITS push-button for setting the background limits without containers on conveyor between the sensor and background target:

- Red or Amber - Sensing back ground target, ready for background limits setup.
- Off - Background target either not aligned with sensor or beyond sensing range.

Press and release LIMITS push-button:

- Flashing Amber - Background limits accepted; waiting for foreground limits setup within 30 seconds.

- Flashing Red - Background limits not accepted; verify background target aligned with sensor and within sensing range before repeating background limits setup (flashing red LED lasts for 10 seconds or until the pushbutton is pressed again).

Place a container on conveyor with the container directly in front of the sensor before pressing LIMITS push-button for setting the foreground limits.

Press and release LIMITS push-button:

- Green - Foreground limits accepted; sensor is ready for detecting container motion.
- Flashing Red - Foreground limits not accepted; verify the container is centered and parallel with sensor face (flashing red LED lasts for 10 seconds or until the push-button is pressed again). Move container away from sen sor, press and release LIMITS pushbutton for flashing amber LED. Place the container di rectly in front of sensor again, press and release LIMITS push-button for green LED diplay.

Setting Limits For The Foreground 1st & Background 2nd

Prior to pressing LIMITS push-button for setting the background limits with a container on conveyor and directly in front of the sensor:

- Green or Amber - Sensing con tainer, ready for foreground limits setup.
- Off - not sensing container, con tainer not centered or parallel with the sensor face.

Press and release LIMITS push-button:

- Flashing Amber - Foreground limits accepted, waiting for bacground limits setup within 30 seconds.
- Flashing Red - Foreground lim its not accepted; verify the container is centered and parallel with sensor face before repeating foreground limits setup (flashing red LED lasts for 10 seconds or until the push-button is pressed again).

Electrical Wiring

Sensor wires must be run in conduit free of any AC power or control wires.

Sensor Wire Colors

	Cable Style	Connector Style
DC Models		
(+) 12 to 24 VDC	RED	BROWN
NPN/Sinking Output	WHITE	BLACK
PNP/Sourcing Output	GREEN	WHITE

Model Reference Guide - SM505 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM5 0 5 A - 1 00 - FS N S 3**

SUPERPROX® Product Series

Power/Connection Type

0...12 to 24 VDC / cable style
2...100 to 240 VAC / cable style
5...12 to 24 VDC / connector style
7...100 to 240 VAC / connector style

Sensing Function

5...Proximity - motion

Design Level

A...Applies to all DC-powered models
B...Applies to all AC-powered models

Sensing Range

0...51 to 635 mm (2 to 25")
1...51 to 1 m (2 to 39")

Functionality

00...Standard Proximity - motion

Special Features

...No letter indicates standard sensor with no special features
FS...Fluorosilicone transducer face
AA...Remote limit setup (available on cable models only.)
AB...RS232, 4-digit/2-decimal place output (available on cable models only.)
AD...Limits push-button disabled
AE...RS232, 5-digit/3-decimal place output (Available on cable models only.)
AF...No LEDs

Housing Types

...No letter indicates standard ULTEM®* plastic housing
N...NORYL®* Dairy 3A gray plastic housing

Remote Type

...No letter indicates standard coupler
R...Right-angle sensing head with armor cable
S...Straight sensing head with armor cable

Remote Cable Length

...No number indicates standard coupler
1...254 mm (10")
2...508 mm (20")
3...762 mm (30")
4...1016 mm (40")

Armored (standard) or PVC cable (specify P after number)

5P...1270 mm (50")
6P...1524 mm (60")

Available in PVC cable only

General Specifications

Sensing

Range:
51 to 1 m (2 to 39")
Sonic Frequency: 200 kHz

Power Requirements

DC Models:
12 to 24 VDC ± 10% @ 80 mA, 2 W max., excluding output load (regulated supply)
AC Models:
100 to 240 VAC, 50/60 Hz, @ 30 mA, 7.5 VA max., excluding load

Outputs

DC Models:
NPN Sinking: Switch selectable N.O./N.C.
Sinking on-state voltage drop:
Maximum 0.25 volts @ 60 mA
Sinking load current:
Maximum 100 mA
Sinking output voltage:
Maximum applied 30 VDC
PNP Sourcing: Switch selectable N.O./N.C.
Sourcing output current:
Maximum 100 mA
Current limit protected to less than 160 mA
AC Models:
Triac, switch selectable N.O./N.C.
Maximum continuous load current: 1 Amp
Maximum applied output voltage: 260 VAC
Maximum off-state leakage current: less than 50 µA (100% PLC/AC input interface compatibility)

ResponseTime

"On" 100 ms, "Off" 100 ms

Indicators

Multicolored (Amber, Red, Green)
LED: Indicates limits setup and operational modes
Red LED: Indicates sensor output; illuminated when output is in an active (on) state.

Connections

Cable Style Models:
DC: 24 AWG, PVC jacket, 4-conductor, 3 meters (10') long, standard
AC: 20 AWG, PVC jacket, 4-conductor, 3 meters (10') long, standard
Connector Style Models:
DC: 4-pin, "mini" style
AC: 4-pin "mini" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity, fused on AC model
Outputs: current-limited over voltage, ESD, over-current, fused TRIAC on AC model

Environmental

Operating Temperature Range:
0° to 50°C (32° to 122°F)
Storage Temperature Range:
-40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X, IP67
Chemical Resistance: Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61010-1: 1990 including amend. No.1:1992
EN55011 Group 1 Class A, EN50082-1.
Declaration of conformity available upon request.
AC Models SM520/570 carry the ETL safety label.

Construction

Dimensions (overall)
92 mm (3.625") L x 44 mm (1.75") W x 91 mm (3.58") H
Housing:
Case: ULTEM®* (FDA approved)
Optional: NORYL®* (USDA-Dairy 3A Sanitary Standards compliant)
Transducer Face: Silicone rubber (FDA approved)
Optional: Fluorosilicone rubber
Sensor Cable: PVC jacket
LED: Polycarbonate

* ULTEM® and NORYL® are registered trademarks of The General Electric Co.

SUPERPROX® Ultrasonic Analog Output Sensors

- *Easy push-button setup for setting sensing span limits*
- *Switch for selecting either direct or inverse proportional output*
- *4 to 20 mA or 0 to 10 VDC selectable outputs*
- *Adjustable analog output response potentiometer*
- *SUPERPROX® housing meets IP67 and NEMA 4X (indoor use only) industry standards*
- *CE certified*

The SUPERPROX® Model SM506A (cable style) and Model SM556A (connector style) ultrasonic, noncontact sensors with a sensing range of 51 mm (2") to 2 meters (79") are readliy available. These rugged sensors monitor the distance to an object while generating a proportional analog output relative to two span limits which can be easily set with the push of a button. For applications such as maintaining a constant fill level in a filler machine, the analog output modulates the product flow into the filler as the filler speed changes. The analog output may modulate the speed of other machinery or regulate the movement of control valve actuators. Two discrete outputs, with setup and operation independent of the analog output span limits, provide alarm capability through the single sensor.

The analog output may also connect directly to programmable controller analog input modules for performing complex loop control or simple status (e.g., distance measuring) monitoring functions.

Easy to install and operate, these reliable SUPERPROX® DC-powered sensors carry the CE Mark. The sensor housing meets NEMA 4X (indoor use only), IP67 industry standards and a Dairy 3A compliant housing is available as an option.

Introduction

Hyde Park's SUPERPROX® sensors with analog output employ the latest in piezoelectric, ultrasonic, and microprocessor technology to provide reliable, noncontact, level, distance, or size measurement sensing for a wide variety of process-control applications.

As shown in Figures 1 and 3, these sensors have a sensing range of either 51 mm to 1 m (2 to 39") or 120 mm to 2 m (4.7 to 79"), at or within which the analog span limits and alarm set points (if selected) can be set.

Sensor is Quickly and Easily Configured

This is done through four dip switches, two push-buttons, and a one-turn potentiometer located inside a watertight control compartment at the back side of the sensor (Fig. 2 and Fig.4). Access to the compartment is gained by loosening two flathead screws, inserting a small screwdriver in either the top or bottom slot, and removing the square cover. A short plastic tether prevents separation of the cover from the sensor.

Loss of Echo

Loss of echo occurs when the sensor does not receive echos from an object within its sensing range for more than one second. When this occurs, the analog signal will go to the minimum or maximum value depending on the position of configuration Switch 2. When the sensor again receives echos from within its sensing range, the analog signal is updated to a value indicating the object's present position relative to the span limits.

"LE" Option - Function "00" & "81" or Hold Output on Loss of Echo - Function "98" & "99"

Depending on model functionality, when loss of echo occurs for more than one second, the analog signal will hold at the value of the last echo received. When the sensor again receives echos within its sensing range, the analog signal is updated to a value indicating the object's present position relative to the span limits.

Models with Alarms

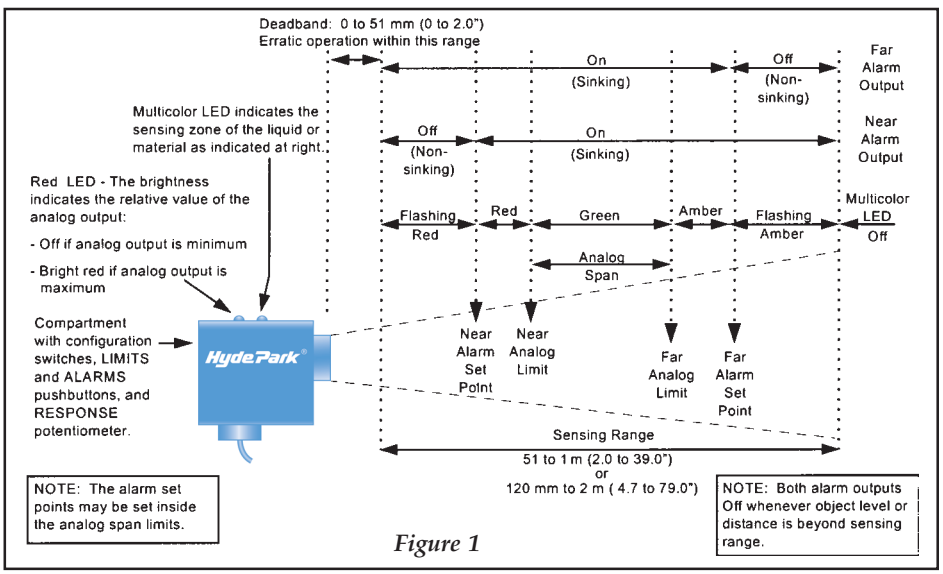

Figure 1

Models without Alarms

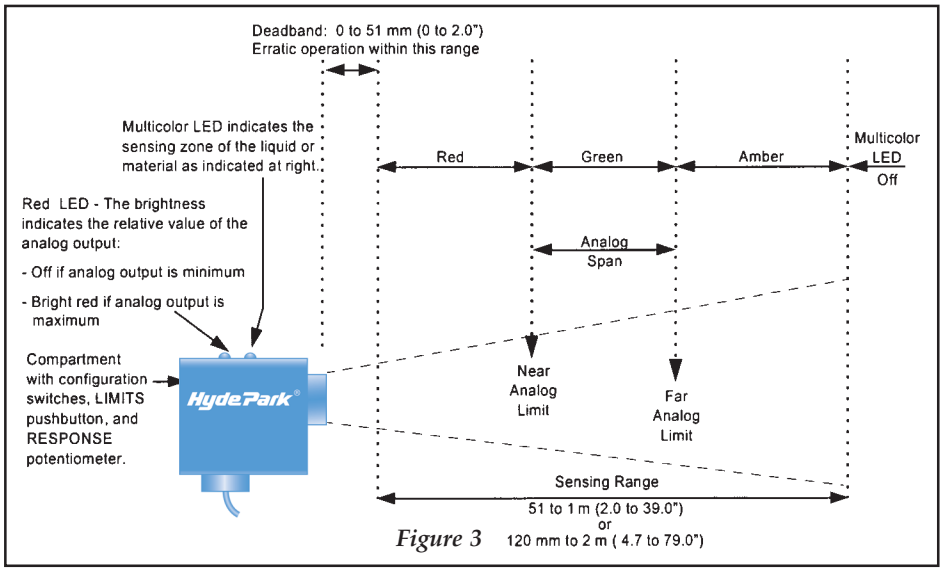

Figure 3

Sensor Configuration Switches

Switch 1 (all models) selects either a directly (DIR) or inversely (INV) proportional (level or distance of an object relative to the span limits) analog output. When the switch is in the DIR position, the maximum analog output occurs at the limit closest to the sensor. When the switch is in the INV position, the maximum analog output occurs at the limit farthest from the sensor.

Switch 2 selects the desired analog output on loss of echo for all models as shown in the chart below. For models with alarms, Switch 2 works with Switch 3 in selecting the state of the output. Switch 2 also determines the state of the output on power-up.

Switch 3 (models with alarms only) selects whether the analog output goes to default, minimum or maximum output, or holds on loss of echo.

Switch 4 (models with alarms only) selects either a current or voltage output. Place the switch in the VOLT position for 0-10 VDC or in the mA position for 4-20 mA.

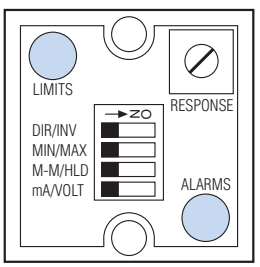

Figure 2 (with alarms)

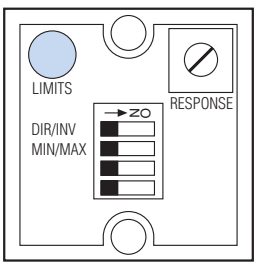

Figure 4 (without alarms)

Analog Response Time Potentiometer

As the position of a sensed object changes relative to the span limits, the analog output changes accordingly. In some applications where there is rapid and erratic object movement or irregular object profiles and surfaces, it may be desirable to reduce the rate of output

change. A one-turn RESPONSE potentiometer, located in the control compartment, allows adjustment or damping of the analog output response to either abrupt or rapid changes in the object's position. The response is adjustable from 70 ms to 2.5 seconds, allowing smooth control regulation or speed modulation of process equipment. Figure 5 illustrates the relationship between the potentiometer setting and the output response time over the entire one-turn range.

	When		
Analog Models:	Switch 2 set at:	Switch 3 set at:	State of the Analog Output on Loss of Echo[1]
With alarms (See note 2 for models with suffix 198.)	MIN	M-M	4 mA or 0 V (Alarms non-sinking and on)
	MAX	M-M	20 mA or 10 V (Alarms non-sinking and on)
	MIN	HLD	No change[3] (and no change in alarms)
	MAX	HLD	
Without alarms and no LE suffix (See note 2 for models with suffix 118 & 188.)	MIN	Not used	4 mA or 0 V
	MAX		20 mA or 10 V
Without alarms and with LE suffix	MIN	Not used	No change[3]
	MAX		

1 Loss of echo occurs when sensor does not receive any echoes within its sensing range for more than one second.
2 These sensor models ignore all echoes outside the programmed span.
3 Means the output will hold at value of last echo received. When sensor again receives echoes within its sensing range, the outputs are updated to a value indicating the object's present position.
NOTE: On power-up, the analog output

The output response is the time period required for the output signal to match 95% of a monitored abrupt change in object position. For example, assume Switch 1 is set to DIR and the potentiometer is set for a response time of 2.5 seconds (fully CW). At the far span limit the output is 4 mA. The object being detected has been stable at the far limit but then moves to the near span limit very rapidly. Two and one-half seconds after the object reaches the near limit, the analog output reaches 19.2 mA… or, (20 mA - 4 mA) .95 + 4 mA. Figure 6 illustrates the output response characteristics for 1.25 and 2.5 seconds.

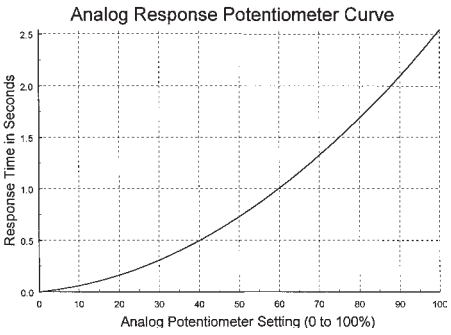

Figure 5

The LIMITS & ALARMS Push-buttons

The LIMITS push-button is used to set both near and far limits of the analog span within which object detection and control takes place. After the limits have been set, the sensor continuously emits either a 0 to 10 VDC or 4 to 20 mA output that is in proportion to the object's position relative to the span limits. For example, if the output selected is 4-20 mA and the object is detected halfway between the analog span limits, the output is 12 mA. The output range adjusts to the size of the analog span and remains proportional regardless of where the limits are set for the analog span.

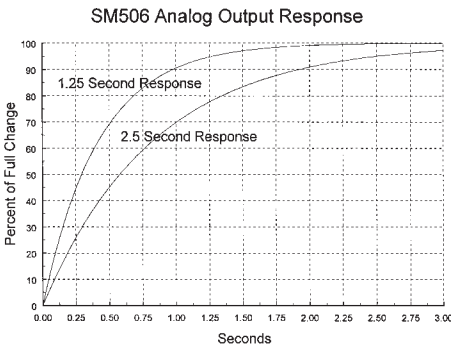

Figure 6

Setting the limits begins by using a flat-surface target, approximately 150 mm x 150 mm (6" x 6") in size, and positioning it in front of and parallel to the face of the sensor. The operator moves the target the desired distance from the sensor that represents either the near or far selected span limit. One press of the LIMITS push-button lights the multicolored LED on top of the sensor amber and sets the limit at that distance. When the push-button is released, the LED flashes amber, indicating the other limit needs to be set. Moving a target to the second selected span limit position, which can be as close as 6.5 mm (1/4") from the other limit, and pressing the push-button again sets that limit. Again, while the push-button is depressed, the multicolored LED lights amber. Upon release of the push-button, the LED turns green to indicate acceptance of both span limits. At the same time, the sensor output switches from the inactive to active state, placing the sensor in operation, ready to use. If, in setting either span limit the echo from the object is too weak or distorted, the multicolored LED flashes red for 10 seconds or until the push-button is pressed again. This indicates the limit setting was not accepted by the sensor. If power is interrupted or is turned off during operation, the span limits are retained in a nonvolatile memory.

During operation, as long as an object is within the analog span limits, the multicolored LED remains green. The other LED (always red) indicates the relative value of the analog output and varies in intensity according to the output. The higher the current or voltage output, the brighter the red LED. See Page 4-64 for further explanation.

The ALARMS push-button (on alarm models) is used to set two discrete alarm set points anywhere within the sensing range where alarm outputs are required to protect equipment from potential damage. An example would be the prevention of an overflow condition. Setting the alarm set points follows the same procedure as for the span limits with one exception: Upon release of the ALARMS push-button for the second alarm set point, the multicolored LED flashes amber for the farther (from the sensor) set point and flashes red for the nearer set point to indicate acceptance of both alarm set points.

Multicolored LED status

When setting analog span limits:
While LIMITS push-button is held in the first time at first limit:

- Amber - sensing solid, stable object
- Red - sensing unstable object or no object

After release of LIMITS push-button first time, at first limit:

- Flashing Amber - first limit accepted, waiting for second limit
- Flashing Red - first limit invalid; retry

While LIMITS push-button is held in the first time at second limit:

- Amber - sensing solid, stable object
- Red - sensing unstable object or no object After release of LIMITS push-button first time, at second limit:
- Green or Red - second limit (near) accepted
- Green or Amber - second limit (far) accepted
- Flashing Red - second limit not accepted; begin again with first limit setup

When setting alarm setpoints:
Press and release the ALARMS push-button with the object at the desired far-alarm set point.

- Flashing Amber - Far-alarm set point is set.

Press and release the ALARMS push-button with the object at the desired near-alarm set point.

- Flashing Red - Near-alarm set point is set.

NOTE: When either one of the alarm set points is reset at a different point, the other alarm set point must also be reset.

During operation:

- Flashing Red - object sensed at or closer than the near-alarm set point.
- Red - object sensed between the near- alarm set point and the near limit.
- Green - object sensed at or between the near and far limits.
- Amber - object sensed be tween the far limit and the far-alarm set point.
- Flashing Amber - object sensed at or farther than the far-alarm set point.
- Off - no object sensed within the full sensing range.

Red LED status during setup and operation:

During setup of sensor, the red LED has no significance. During operation, the brightness of the red LED indicates the relative value of the analog output. The red LED is off when the output is minimum and brightest red when the output is maximum.

Electrical Wiring

These analog sensors are available as either three-wire or five-wire devices, depending on the configuration selected. The model with remote limits setup is either a four- or six-wire device, available only as a cable style model. NOTE: In order to avoid unwanted electrical interference, the sensor wires must be run in conduit separate from any AC power or control wires.

Model Reference Guide - SM506 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: SM5 06 A-4 81- FS N S 4

SUPERPROX® Product Series

Power/Connection Type
0...15 to 24 VDC / cable style
5...15 to 24 VDC / connector style

Load Resistance	10 to 1K	200 to ¥	Ohms
Resolution[3]	0.004 mA	2.5 mVDC	
Accuracy[4]	± 0.50	± 0.40	% of span
Linearity	± 0.10	± 0.10	% of span
Temperature dependence	± 0.006	± 0.004	% of span/°C

[1] tested with 250 Ohm load
[2] tested with 470 Ohm load; a low value is recommended to minimize noise pickup
[3] resolution = span/4000; maximum: 0.08 mm (0.003")
[4] best accuracy may be limited to + 1/32 +0.794 mm (0.03125") due to wave-skip phenomena

Power Requirements

15 to 24 VDC ± 10% @ 80 mA excluding output load

Outputs

Switch selectable for either 4 to 20 mA or 0 to 10 VDC in alarm models only. Other models dedicated to either 4 to 20 mA or 0 to 10 VDC.
Non-isolated
Sinking Outputs:
Maximum on-state voltage drop @ 60mA: 0.25 v
Maximum load current: 100 mA
Maximum applied voltage: 35 VDC

ResponseTime

0.07 to 2.5 seconds
(See analog output response curves.)

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates LImits-setup and operational modes
Red LED: Visual indicator for analog output; intensity varies as output magnitude changes.

Connections

Cable Style Models:
DC: 24 AWG, PVC jacket, 3-,4-, or 5-conductor, 3 meters (10') long, standard
Connector Style Models:
DC: 24 AWG, 4- or 5-pin "mini" style

Protection

Power Supply: Current-limited over-voltage, ESD, reverse polarity
Outputs:Current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
0° to 50°C (32° to 122°F)
Storage Temperature Range:
-40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings:
NEMA 4X (indoor use only), IP67
Chemical Resistance:
Resists most acids and bases, including most food products. Fluorosilicone transducer face is available to provide resistance to aromatic and petroleum-based hydrocarbons.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61010-1: 1990 including amend. No.1:1992
EN55011 Group 1 Class A, EN50082-1.
Declaration of conformity available upon request.
AC Models SM520/570 carry the ETL safety label.

Construction

Dimensions (overall)
92 mm (3.625") L x 44 mm (1.75") W x 91mm (3.50") H cable style
Housing:
Shock and vibration resistant
Case: ULTEM®* (FDA approved)
Optional: NORYL®* (USDA-Dairy 3A Sanitary Standards compliant)
Transducer Face: Silicone rubber (FDA approved)
Optional: Fluorosilicone rubber
Sensor Cable: PVC jacket
LED: Polycarbonate

* ULTEM® and NORYL® are registered trademarks of The General Electric Co.

Accessories

Model AC105, Straight, 7/8-16 mini, 4-conductor, mating connector cable, 4 m (12'), for connector-style sensors

Model AC105-50, Straight, 7/8-16 mini, 4-conductor, mating connector cable, 15 m (50'), for connector-style sensors

Model AC115, Straight, 7/8-16 mini, 5-conductor, mating connector cable, 4 m (12'), for Model SM556A-X9X series analog, connector-style prox sensors with alarms

Model AC115-50, Straight, 7/8-16 mini, 5-conductor, mating connector cable, 15 m (50'), for Model SM556A-X9X series analog, connector-style prox sensors with alarms

Model AC213, Stainless and Teflon, remote sensing probe mounting bracket

Model AC222, Standard, stainless mounting bracket assembly, slotted for vertical adjustment

Model AC229, Stainless, plate-style, right-angle, mounting bracket, with base slotted for forward/reverse adjustment and side slotted for sensor adjustment

Model AC230, Three-piece, stainless, mounting bracket assembly with O-ring mount for sensor models with remote heads.

See page 7-1 for accessory photos.

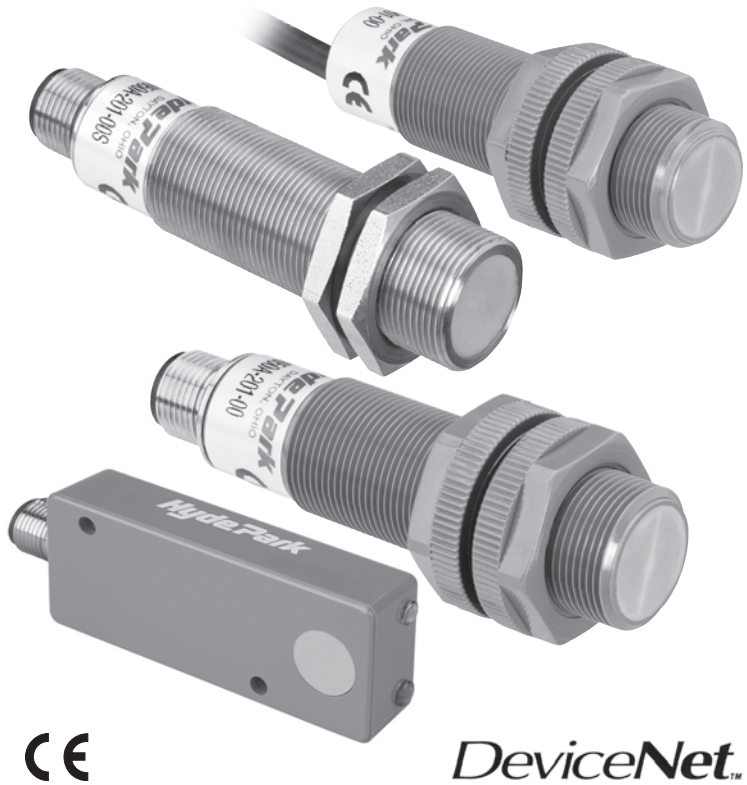
SUPERPROX® 600 Series Introduction



18 mm & Flat-Profile Ultrasonic Sensors

SUPERPROX® Model SM600 Series
Proximity Sensing

SUPERPROX® Model SM602
Dual-Level Sensing

SUPERPROX® Model SM606
Distance Sensing with Analog Output

SUPERPROX® Model SM607
Small-Target Sensing

- ***Field programmable capability n 18 mm and flat-profile models***
- ***DeviceNet capability in flat-profile models***
- ***CE certified***

Now available, one of the world's finest series of ultrasonic proximity sensors

Built on a long tradition of excellence in ultrasonic, proximity sensing achieved by the SUPERPROX® 500 sensor series, an array of ultrasonics now offers an added dimension in object detection and control. The SUPERPROX® 600 series of sensors, by virtue of their size, powerful sensing performance and versatility, extends the limits of opportunities for accurate, reliable sensing for industries everywhere. Including those applications previously assigned to other less reliable, less productive sensing devices.

Available in 18 mm barrel models, housed in rugged ULTEM® plastic or stainless steel, and a new compact "flat-profile" housing of ULTEM® plastic, these sensors fit easily in areas where sensor space is very limited. Protection Ratings of NEMA 4X (indoor use only) and IP67 help to ensure nonstop operation, day in and day out. Like the SM500 series, these sensors resist wet, harsh environments, dust, ambient light, high noise levels, frequent high-pressure washdown, and severe duty applications. Once set up and operating, these miniatures need very little attention. Even under the messiest conditions, they reliably detect most every kind of material.Especially clear glass, plastic, and film, this is an important advantage over many photoelectric sensors. Changing light conditions and colors have no effect on sensing capability and no sensitivity adjustments are necessary to compensate for inconsistent materials.

Unlike the SM500 series, the SM600 series has fixed, as opposed to push-button set, sensing "windows" within which the object detection takes place.

A variety of different fixed sensing windows are available within each specific model series. These and other features make the sensors the perfect fit for achieving optimum productivity in many sensing applications.For sensing applications requiring connection to a **DeviceNet** network, the flat-profile models in this series are available with this capability as an optional selection.

Field Configurable Sensor Models

SUPERPROX+® software combined with the Model AC441A configurator interface module enables the SC600 series sensors to be programmed by the user with either standard or custom sensing configurations. These field configurable sensors use an 'SC' prefix in the model number to designate and differentiate the sensors from factory configured SM 600 series models.

All the unique sensing capabilities and functions available in the SM600, 602, 606, and 607 sensor series are also available in field configurable SC600 / 606 models. An even greater sensing capability in functionality is realized with these field configurable sensor models through the user-friendly SUPERPROX+™ software to allow customization for specific applications.

For more details on the Model SC600 series and other field configurable sensor models along with the Model AC441A configurator interface module go to the SUPERPROX+™ section found on page 4-145 in the catalog.

Operation

The SM 600 series is a self-contained, pulse-echo device that both transmits and receives sonic energy within its programmed sensing range. Like the SUPERPROX® 500 series, these sensors use the latest ultrasonic technology along with a discriminating microprocessor to ignore all surrounding sonic interference and detect only the designated object. An object is detected when it is at or within the fixed sensing window.

How does it work?

During setup and operation, the SM600 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the fixed window limits. These limits are shown in the illustration below as Dwi and Dwo. If D is at or within the fixed window limits, an output change takes place and remains unchanged until the echo either does not return or it returns from outside the fixed window limits. In the case of the Model SM606 series, an analog output changes proportionally with respect to the limits of the analog sensing span.

The SUPERPROX® 600 Series meets a variety of important sensing needs.

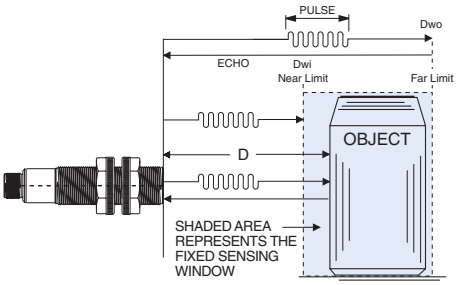
The SM600series sensors represent simple but reliable object detection with a variety of sensing windows with sensing ranges up to 254 mm (10"). The sensor outputs are either discrete sinking and sourcing or 0 to 10 V analog.

Applications

For applications specific to the four series of SUPERPROX® 600 series sensors, see either the product information sections that follow or the Application/Sensor Selection Chart on Page 2-1.

For increased productivity in challenging proximity sensing applications,

consider this line of SUPERPROX® ultrasonic, proximity sensors. Whether the application calls for the barrel or flat-profile type, accuracy, and reliability are the primary benefits realized. And that translates to increased productivity and profitability.



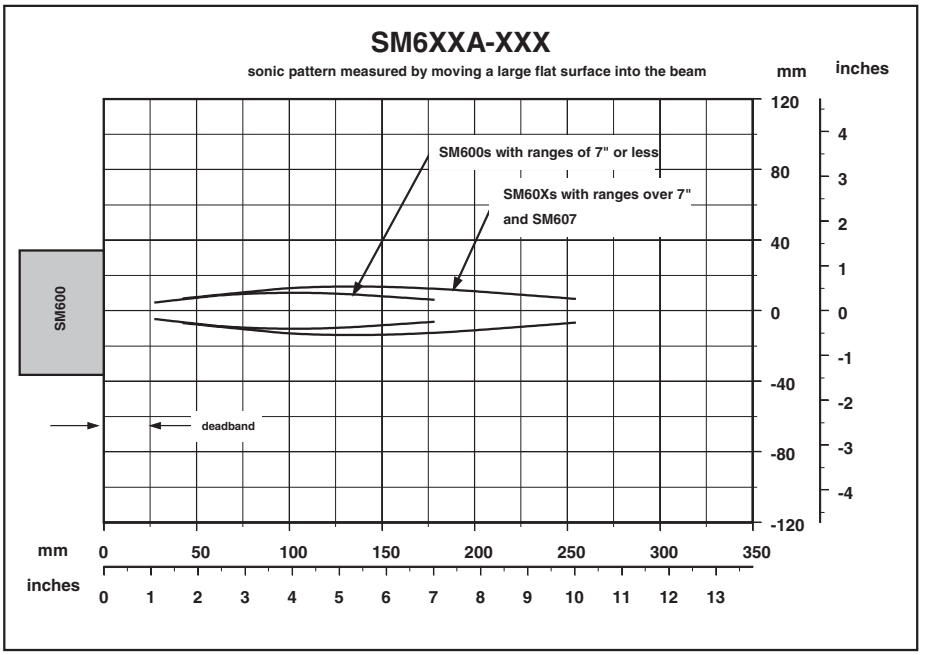
Beam Plots

The following plot, developed from data collected at 20°C and zero air flow, define the boundaries and shape of the sonic beam for vari-ous Hyde Park ultrasonic sensor series.

The boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. The plot for each sensor series is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis.

In each series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin.

This and other plots are available from the SCC upon request.



SUPERPROX® Ultrasonic Proximity Sensors

Long-range Proximity Sensing

- *High resolution 500 kHz ultrasonic frequency*
- *Fast response - as fast as 0.5 ms sampling rate*
- *Self-contained, 18 mm barrel or flat-profile housing styles*
- *Field programmable capability in 18 mm and flat-profile models*
- *DeviceNet capability available in flat-profile models*
- *CE certified*

Now there's a reliable ultrasonic solution for those tough proximity sensing applications.

When short-range sensing applications demand repeatable and reliable on/off control performance, the high-frequency, fixed-window SUPERPROX® Model SM600 series ultrasonic proximity sensors is the ideal solution. These noncontact, self-contained sensors are unmatched for the reliable detection of objects of all kinds, transparent or opaque, liquid or solid, and as small as 1.6 mm (0.06") rod diameter, regardless of color or shape. Offering a variety of sensing ranges, up to 254 mm (10"), and fixed sensing windows, this series provides for the convenient placement of SM600 sensors throughout the plant.

Given the capability to "back off" from formerly "nearly-touching" mounting positions, these sensors are the solution for such applications as: metal parts as close as 25 mm (1"), moving back-to-back at speeds in excess of 2000 per minute. Others include: cap presence and/or tilt detection, fill-level checking, fill-tube-presence monitoring, downed container detection, case inspection, detection of container edges, web monitoring, CD case inspection where opacity, color, and height vary, and wherever there's a need to upgrade a metal prox function.

With protection ratings of NEMA 4X (indoor use only) and IP67, these sensors are impervious to changing light conditions, colors, noise, dust, 100% humidity, caustic chemicals, and other hostile environments. They are resistant to most acids and bases, including most food products. The sensing transducer is made of silicone rubber and the sensors are CE certified. Easy to install, the sensors are available in two different housing styles: the 18mm barrel housing sensor available in either ULTEM® plastic (standard) or SS303 stainless steel and the flat-profile housing available only in ULTEM® plastic. As with all SUPERPROX® sensors, cable and connector styles are available.

For sensing applications requiring connection to a DeviceNet network, the flat-profile models in this series are available with this capability as an optional selection.

Operating on 12 to 24 VDC, these 500 kHz sensors are equipped with sinking type (NPN) and sourcing type (PNP) outputs, a green LED to indicate power "on" and an amber LED to indicate when the object is detected within the fixed window.

Built from the world's finest and most reliable ultrasonic technology, the SUPERPROX® Model SM600 barrel and flat-profile-style proximity sensors are the answer for improved productivity throughout the plant.

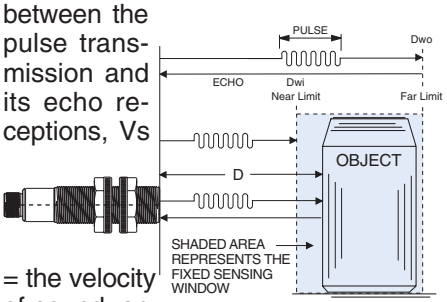
Operation

The Model SM600 series is a self-contained, pulse-echo device that both transmits and receives sonic energy over a sensing range of up to 254 mm (10"). These sensors use the latest ultrasonic technology with a discriminating microprocessor that allows the sensor to ignore all surrounding sonic

interference and detect only the designated object. An object is detected when it is at or within the fixed sensing window.

How does it work?

During setup and operation, these SM600 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions, Vs = the velocity of sound, approximately 1100 feet per second.



During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the fixed window limits. These limits are shown in the illustration as Dwi and Dwo. If D is at or within the fixed window limits, an output change takes place and remains unchanged until the echo either does not return or it returns from outside the fixed window limits.

As shown below, Hyde Park offers normally open (N.O.) or normally closed (N.C.) (sinking and sourcing) output models available for discrete on/off sensing applications.

Model Reference Guide - SM600 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM6 0 0 A - 2 16 - 00 S**

Ultrasonic Miniature Proximity Series

Power/Connection Type
0...12 to 24 VDC / cable style
5...12 to 24 VDC / "micro" connector style
6...12 to 24 VDC / "micro" connector style (output pins reversed)

Sensing Function
0...Proximity Style - no on/off delay

Design Level
A...Applies to all models

Sensing Range (Far Limit)
2...51 mm (2")
3...77 mm (3")
4...102 mm (4")
5...127 mm (5")
6...152 mm (6")
7...178 mm (7")
B...254 mm (10")

Sensing Window (Distance from Far Limit to Near Limit)**
02...3.2 mm (1/8")
04...6.4 mm (1/4")
08...13 mm (1/2")
12...19 mm (3/4")
16...25 mm (1")
32...51 mm (2")
48...77 mm (3")
80...127 mm (5")
96...152 mm (6")
OB...203 mm (8")

Functionality
00...Standard on/off, N.O. output
10...N.C. output
[Contact the factory for additional functionality options]

Housing Types
...No letter indicates standard ULTEM® plastic -18 mm barrel housing
FP...ULTEM® flat-profile housing
S...SS303 stainless steel - 18 mm barrel housing

ULTEM® is a registered trademark of The General Electric Company.

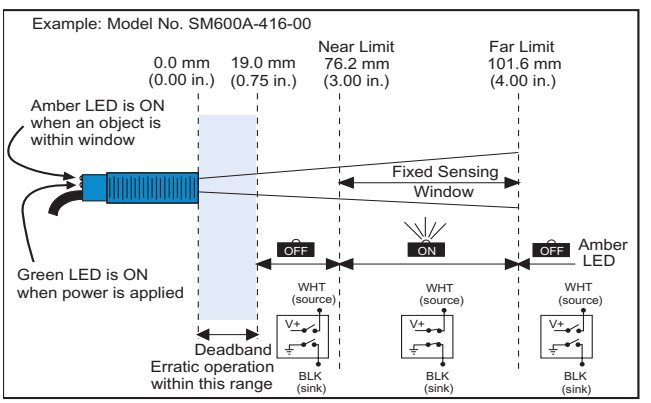
**Not allowed inside the deadband. Deadband is 0.75" for ranges -7", and 1.25" for ranges > 7"

Field configurable and DeviceNet Model Reference Guides start on page 4-145.

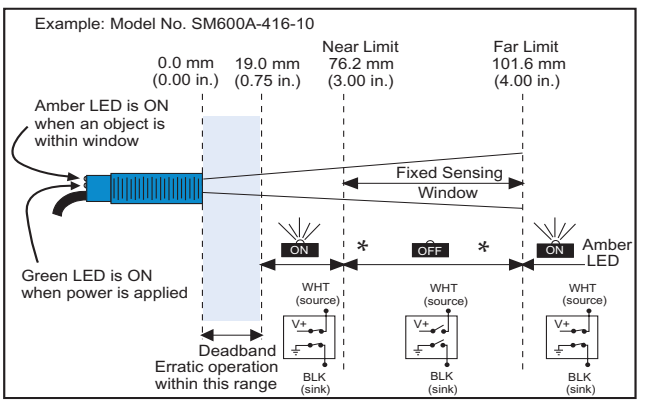
Electrical Wiring

Regardless of model style, the wiring and conductor colors for the Model SM600 series sensors are the same.

Normally Open Output
The sensor output is "On" with the object in the fixed sensing window.



Normally Closed Output
The sensor output is "Off" with the object in the fixed sensing window.



* For connector style, LED states are reversed

Mounting

The Model SM600 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment. Hyde Park offers the:

Model AC226 stainless and polyamide conveyor-rail clamp/ bracket set

Model AC227 large, right-angle, stainless mounting bracket

Model AC228 small, right-angle, stainless, mounting bracket

Model AC231 straight, stainless, mounting bracket

Model AC232 s-shaped, stainless, mounting bracket which are illustrated, with dimensions, on Pages 4-74 and 4-75.

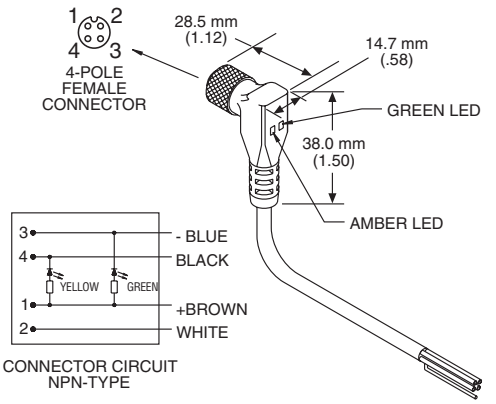
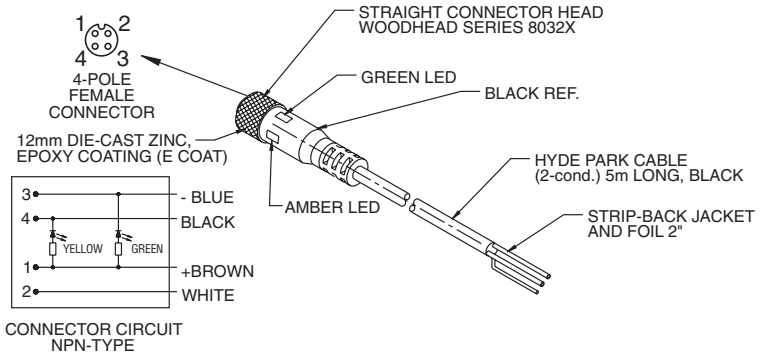
Mounting Accessories

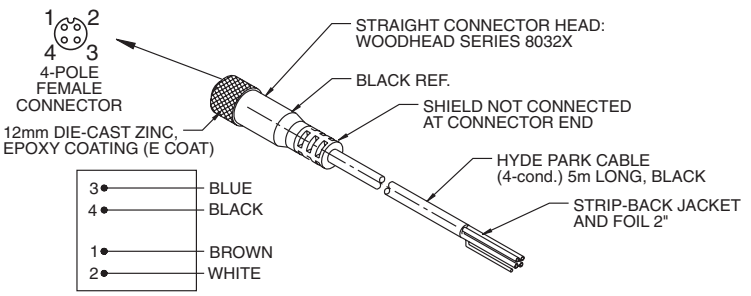
AC117 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



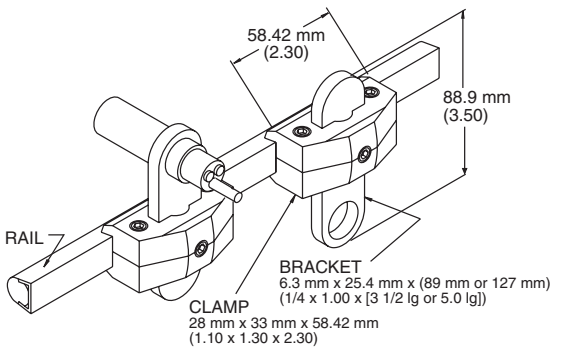
AC127 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



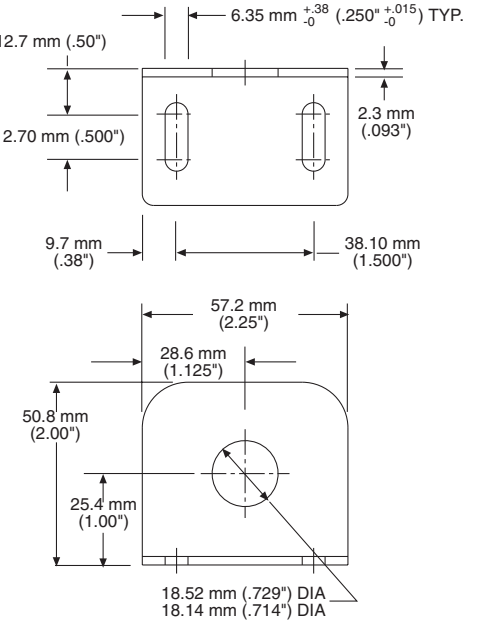
AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)



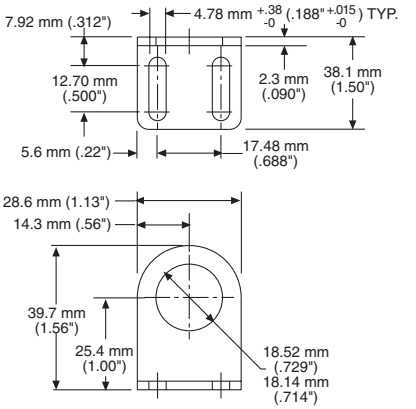
AC226 Stainless and polyamide conveyor-rail clamp/bracket set (for 18 mm barrel sensors)



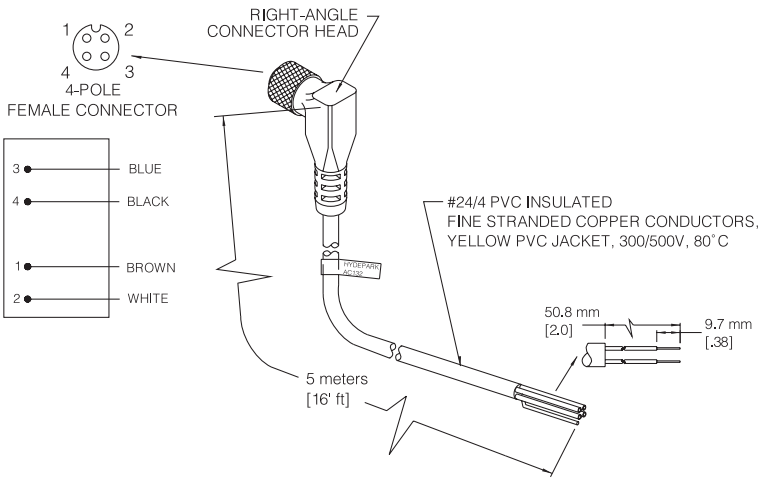
AC227 Large, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



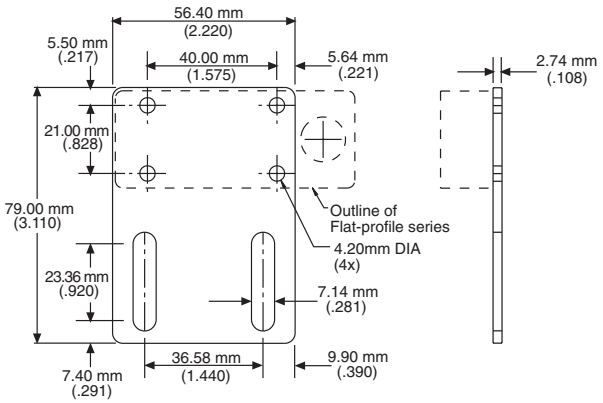
AC228 Small, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



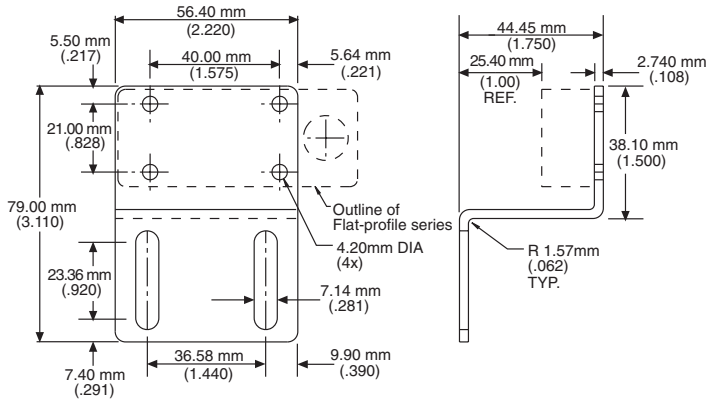
AC132 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile connector-style sensors



AC231 Straight, stainless mounting bracket (for flat-profile sensors)



AC232 S-shaped, stainless mounting bracket (for flat-profile sensors)



General Specifications

Sensing

Ranges:
Up to 254 mm (10")
Spans:
From 3.18 mm (1/8") to 228.6 mm (9")
Window Position, Initial Accuracy:
± 1.59 mm (0.062") max.
Window Position Repeatability:
± 0.69 mm (0.027") max.
Detection benchmarks:
Models with ranges to 177.8 mm (7"):
1.59 mm (1/6") diameter rod at a distance of 63.5 mm (2.5")
Max. ± 10° tilt of large flat object at a distance of 127 mm (5")
Models with ranges from over 177.8 mm (7") to 254 mm (10"):
1.59 mm (1/6") diameter rod at a distance of 76.2 mm (3")
Max. ± 10° tilt of large flat object at a distance of 203.2 mm (8")
Sonic Frequency: 500 kHz
Sonic Cone Angle: 7° (see beam plots, page 4-64)

Power Requirements

Supply Voltage:
12 VDC to 24 VDC ± 10%, regulated supply
Current Consumption:
Cable Model: 50 mA max. (excluding load)
Connector Model: 60 mA max. (excluding load)
Power Consumption:
1 W max. (excluding load)

Output

NPN Sinking: 0 to 30 V
Maximum on-state voltage 0.2 volts @100 mA
PNP Sourcing: 100 mA @ 24 VDC, max.

Response Time

"On" 5 ms, "Off" 5 ms (standard)
"On" 2.0 ms, "Off" 2.0 ms (optional)

Indicators

Green LED: power "On"
Amber LED: "On" if object is detected within the window, regardless of output polarity (N.O./N.C.) style. Connector model using cable with built-in LEDs: "On" if NPN output is low.

Connections

Cable Style Models:
24 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3 meters (10') long
Connector Style Models:
24 AWG, foil shield, lead-free, PVC jacket, 4-conductor, right-angle "Micro" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
0° to 60°C @ 12 VDC supply
0° to 50°C @ 24 VDC supply
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group1 Class A.
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model: 18 mm dia. x 1 mm threaded housing x 65 mm (2.56") long
Connector Model: 18 mm dia. x 1 mm threaded housing x 102 mm (4") long, including connector/cable assembly
Flat-profile
Cable Model: 30 mm (1.182") H x 16.25 mm (0.640") W x 93 mm (3.66") L
Connector Model: 30 mm (1.182") H x 16.25 mm (0.640") W x 84.40 mm (3.322") L
Housing:
Shock and vibration resistant
Case: ULTEM®* plastic - (FDA Approved) (SS303 stainless steel available only in 18 mm barrel-style)
Transducer Face: Silicone rubber - gray
Sensor Cables: Lead-free PVC jacket, black (Model AC117)
LED: Polycarbonate

* ULTEM® is a registered trademark of the General Electric Co.

Accessories

18 mm Barrel Mounting Hardware and Cables

Model AC117, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') with built-in LEDs for barrel connector-style prox sensors
Model AC127, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') with built-in LEDs for barrel connector-style prox sensors
Model AC226, Stainless and polyamide conveyor- rail clamp/bracket set
Model AC227, Large, right-angle, stainless, mounting bracket
Model AC228, Small, right-angle, stainless, mounting bracket

Flat-profile Mounting Hardware and Cables

Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat profile, connector-style prox sensors
Model AC132, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile, connector-style prox sensors
Model AC231, Straight, stainless, mounting bracket
Model AC232, S-shaped, stainless, mounting bracket

See page 7-1 for accessory photos.

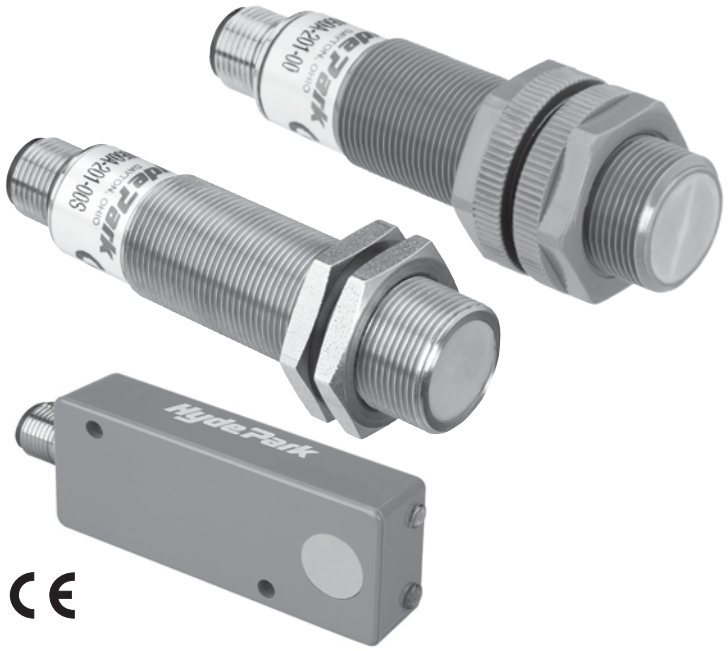
All possible sensor configurations are not listed here.



SUPERPROX® Ultrasonic Dual-Level Sensors

- *High resolution 500 kHz ultrasonic frequency*
- *Self-contained, 18 mm barrel or flat-profile housing styles*
- *Dual-level on/off latch*
- *Field programmable capability in 18 mm and flat-profile models*
- *DeviceNet capability available in flat-profile models*
- *CE certified*

Two styles of reliable ultrasonic sensors offer short range sensing solutions for dual-level control applications where mounting space is very limited

Functionality of the ver-satile, industry proven SUPERPROX® Model SM502 series is now part of the Model SM602 series of 18 mm or flat-profile, dual-level sensors. Utilizing the same world-leading, ultrasonic technology, these two styles of "smart" sensors can be selected for specific on/off latch or dual-alarm control functions. Other model selections include a variety of output types, response times, sensing ranges, and functionality to provide the sensing solution for a wide assortment of non contact, short-range, dual-level control applications.

Operation

Hyde Park's 18 mm barrel and flat-profile style of self-contained, dual-level sensors monitor and control most nonhazardous liquid or dry material levels within a sensing range of 25.4 mm (1") to 254 mm (10"). When selecting by model number from several factory-programmed, dual-limit parameters (near limit and far limit), the sensor can be set up to perform either an on/off latch or a dual-alarm control function.

The 18 mm threaded barrel-style housing is available in either ULTEM® plastic or SS303 stainless steel while the flat-profile housing is available in ULTEM® plastic only. Both provide ease-of-installation convenience, particularly in applications with hard-to-mount or limited-space mou-nting areas. All models in this sensor series operate on 12 to 24 VDC regulated power.

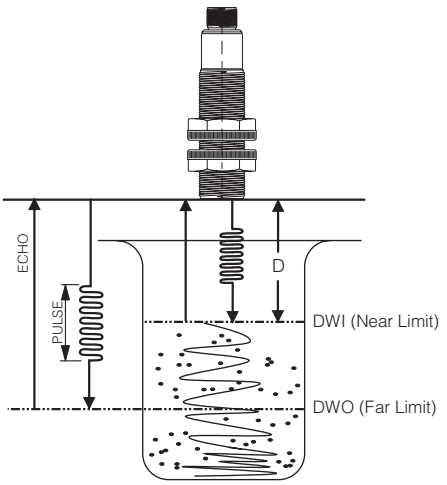
For sensing applications requiring connection to a **DeviceNet** network, the flat-profile models in this series are available with this capability as an optional selection.

The Model SM602 sensor series offers dependable operation and compatible integration with most programmable logic controllers. Each sensor is epoxy sealed to withstand harsh, wet, messy, and dusty environments typically associated with level-control applications. With protection ratings of NEMA 4X (indoor use only) and IP67, both sensor styles are impervious to changing light conditions, colors, noise, non-condensing humidity, caustic chemicals, and other hostile environments. They are resistant to most acids and bases, including most food products. The SS303 stainless steel, 18 mm housing allows application use where USDA-3A sanitary compliance is required. The sensing transducer is made of silicone rubber and the sensors carry the CE mark.

How does it work?

During setup and operation, these SM602 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula, D = TVs/2, where:D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions;Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object (e.g., level) is compared to the distance between the sensor and the near and far span limits. These limits are shown in the illustration at right as Dwi and Dwo. When D is equal to one of the two span limits, according to the level-control functions, an output change takes place.



Level-Control Functions

The level-control output in the Model SM602 series can be configured for one of three different operating functions. Using the Model Reference Guide, the sensor can be selected to perform either a pump-in level-control function, pump-out level-control function or a dual alarm level-control function.

Pump-in Level Control

When the level moves beyond the far limit, the sensor level control output switches state and latches, starting a pump-in process. The sensor level control output does not change state until the level moves back beyond the near limit to stop the pumping or filling process.

Pump-out Level Control

When the level moves beyond the far limit, the level control output switches state and latches, stopping a pump-out process. The sensor level control output does not change state until the level moves back beyond the near limit to restart the pump-out process.

Model Reference Guide - SM602 Series

Both the cable and connector style sensors are available in various models. Use the guide below to select or order the sensor to ensure the correct model number is specified for the application.

EXAMPLE **SM6 02A - 6 04 - 10**

SUPERPROX® Product Series

Power/Connection Type
0...12 to 24 VDC / cable style
5...12 to 24 VDC / "micro" connector style

Sensing Type
2...Dual point

Design Level
A...Applies to all models

Far Limit/Alarm
4...102 mm (4")
5...127 mm (5")
6...152 mm (6")
B...254 mm (10"), maximum

Near Limit/Alarm
(Distance from Far Limit/Alarm to Near Limit/Alarm)**
04...6.4 mm (1/4")
06...9.5 mm (3/8")
16...25 mm (1")
32...51 mm (2")
OB...203 mm (8")

Functionality
00...Pump-out latch
03...Pump-out latch with loss of echo
10...Pump-in latch
13...Pump-in latch with loss of echo
20...Dual alarm, normally open (N.O.)
23...Dual alarm, normally open (N.O.) with loss of echo
30...Dual alarm, normally closed (N.C.)
33...Dual alarm, normally closed (N.C.) with loss of echo

Options
Contact the factory for available options

Housing Types
...No letter indicates standard ULTEM®* plastic - 18 mm barrel housing
FP...ULTEM®* flat-profile housing
S...SS303 stainless steel - 18 mm barrel housing

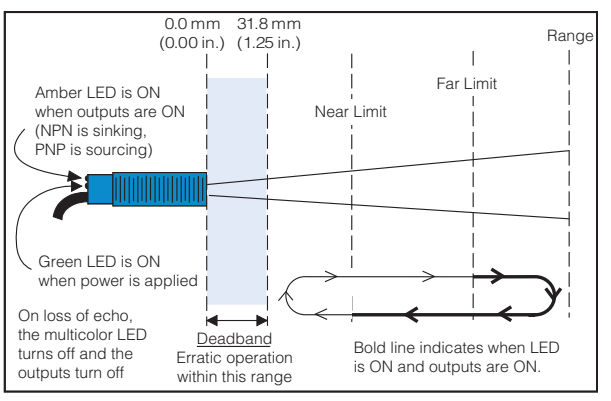
NOTE: Contact the factory for DeviceNet communications capability in the flat-profile models
* ULTEM® is a registered trademark of The General Electric Company.
**Not allowed inside the 1.25" deadband, using standard gain sensor

Dual-Alarm Level Control

The far alarm output switches when an object moves beyond the far alarm limit and changes state when an object returns closer than the far alarm limit. The near alarm output switches when an object moves closer than the near alarm limit and changes state when an object returns beyond the near alarm limit.

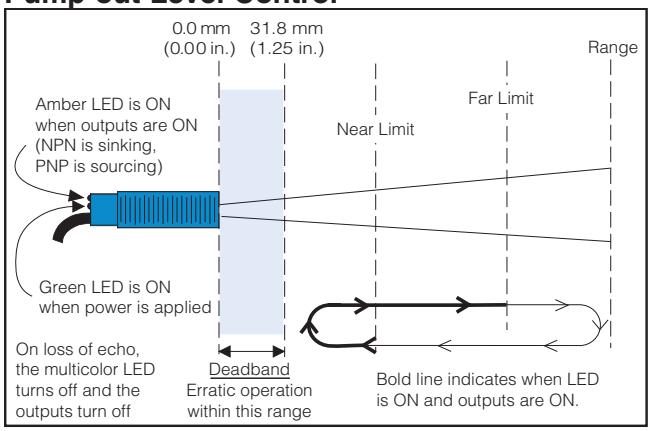
Sensor Operating Profiles

Pump-in Level Control

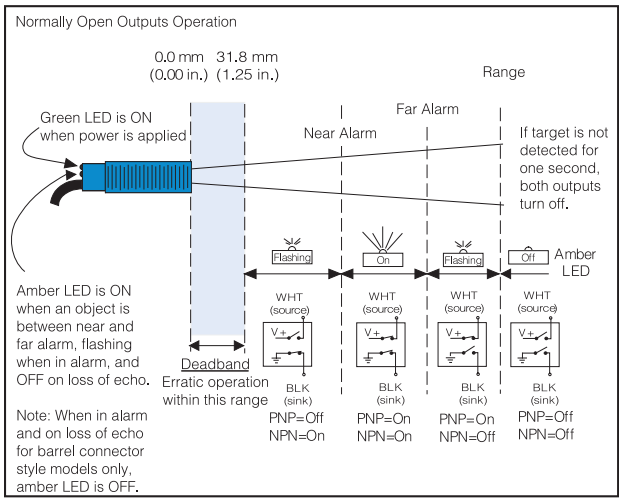


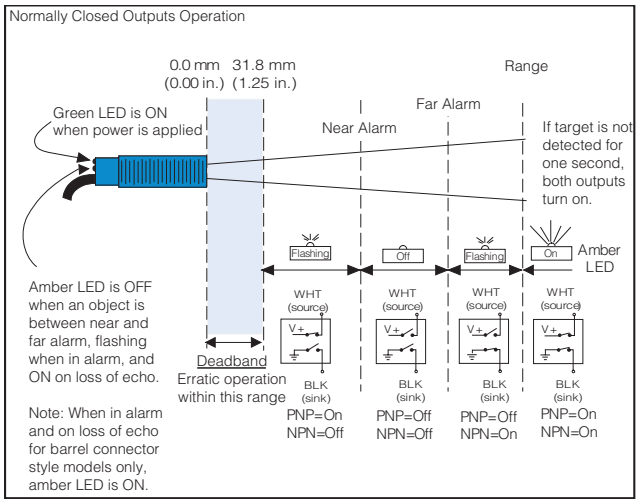
Sensor Operating Profiles (cont.)

Pump-out Level Control



Alarm Level Control





Loss of Echo Operation

Output Off on Loss of Echo

Loss of echo occurs when the sensor does not receive echoes from an object within its sensing range for more than one second. When this occurs, the sensor's output automatically switches OFF. When the sensor again receives echoes, the output assumes the state relative to the control limit setpoints.

The only exception applies to the alarm level control models with normally closed outputs as shown and noted in the illustration.

Output Holds on Loss of Echo ("LE" Option)

The LE suffix indicates an available option for users who do not prefer the standard response to loss of echo. With the LE option, when loss of echo occurs, there is no change in the output state of the sensor. When the sensor again receives echoes, the output assumes the state relative to the control limit setpoints.

Mounting

The Model SM602 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment. Hyde Park offers the Model AC226 stainless and polyamide conveyor-rail clamp/bracket set, Model AC227 large, right-angle, stainless mounting bracket, Model AC228 small, right-angle, stainless, mounting bracket, Model AC231 straight, stainless, mounting brac-ket and Model AC232s-shaped, stainless, mounting bracket. All are illustrated with dimensions on Pages 4-87 and 4-88.

Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

Cable Model Wire Assignments

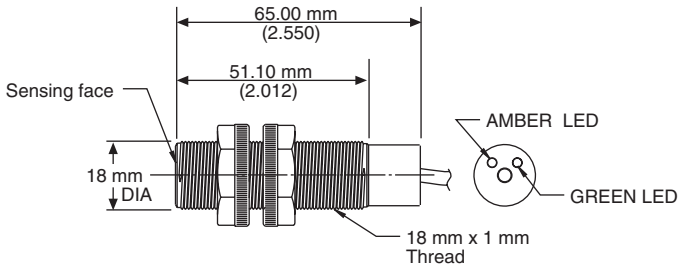
Dimensions

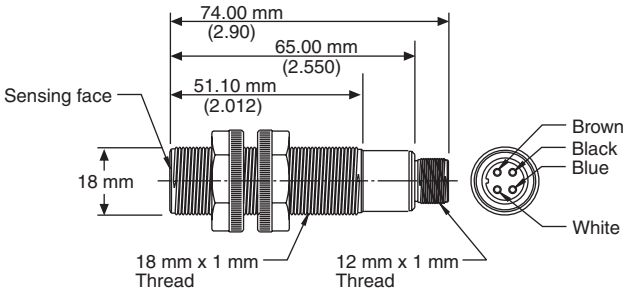
Barrel Cable Style

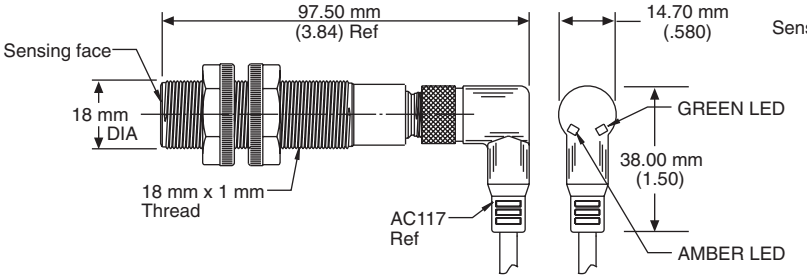
(ULTEM® plastic and stainless steel) SM602A-XXX-XX, SM602A-XXX-XXS

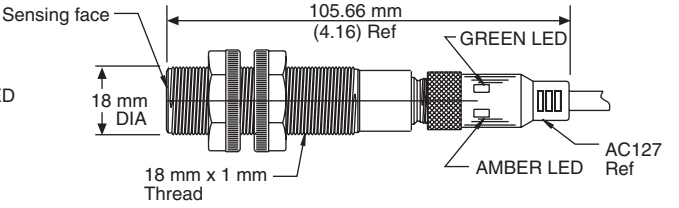


Barrel Connector Style

(ULTEM® plastic and stainless steel) SM652A-XXX-XX, SM652A-XXX-XXS

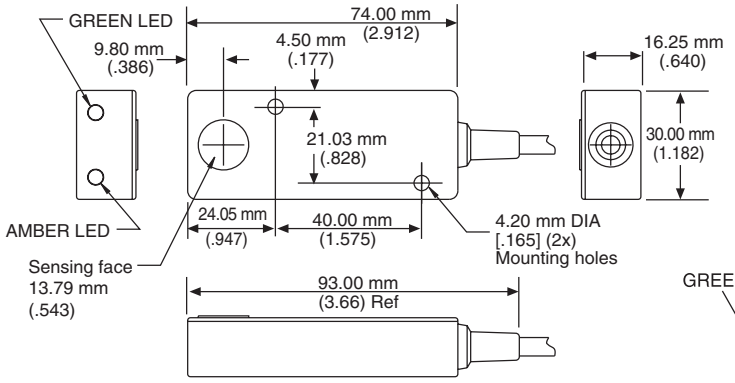






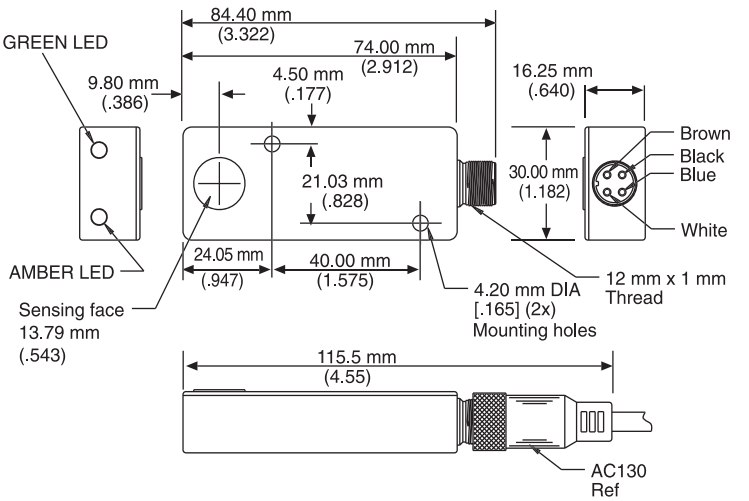
"Flat-profile" Cable Style

(ULTEM® plastic) SM602A-XXX-XXFP



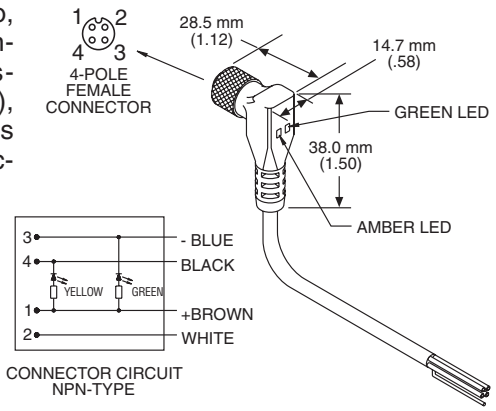
"Flat-profile" Connector Style

(ULTEM® plastic) SM652A-XXX-XXFP

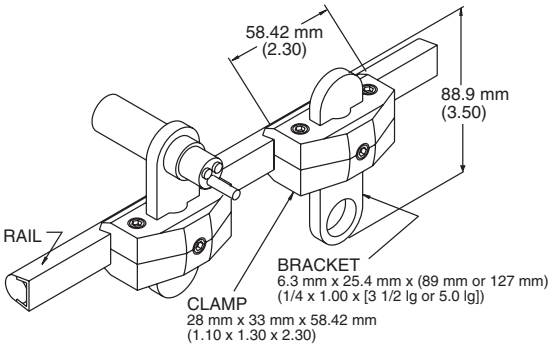


Mounting Accessories

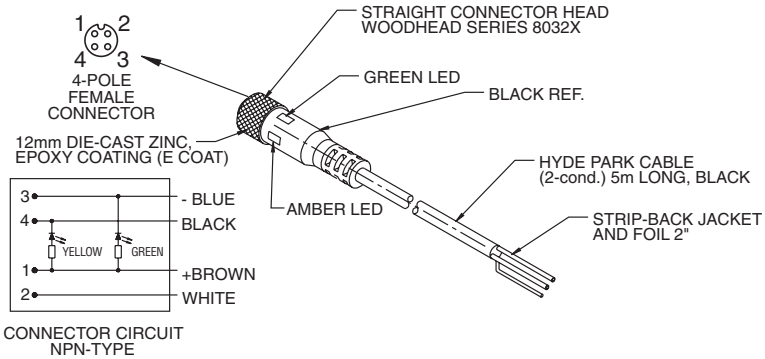
AC117 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



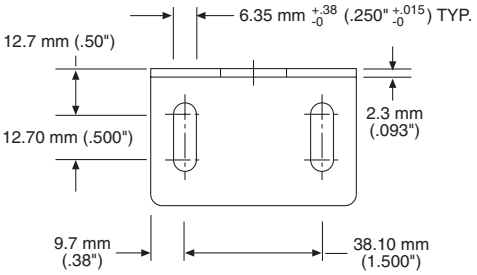
AC226 Stainless and polyamide conveyor-rail clamp/bracket set (for 18 mm barrel sensors)



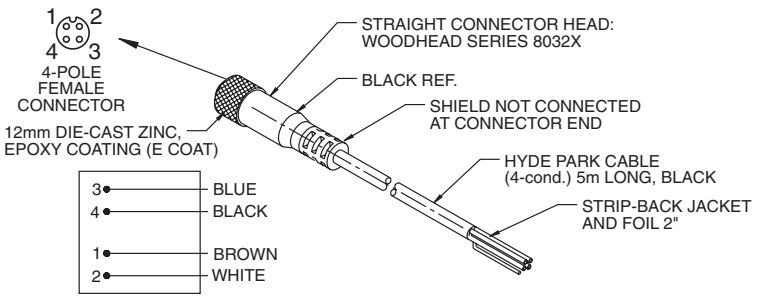
AC127 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)

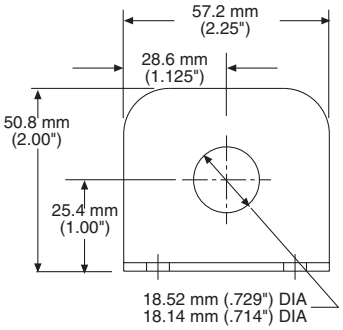


AC227 Large, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)

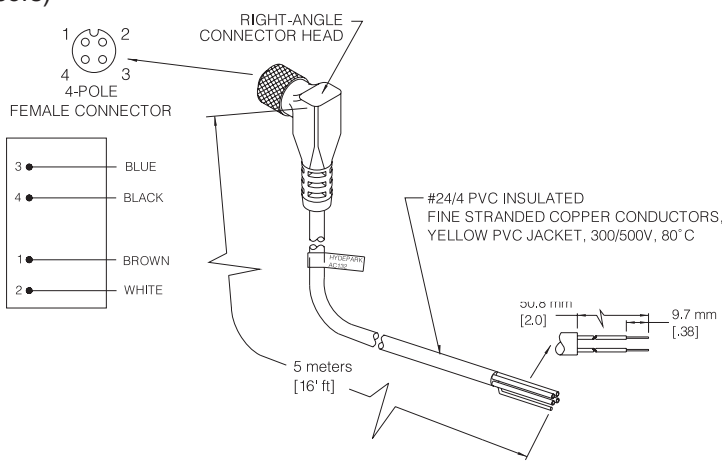


AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)

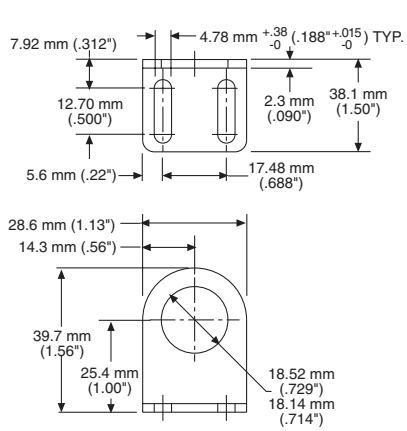




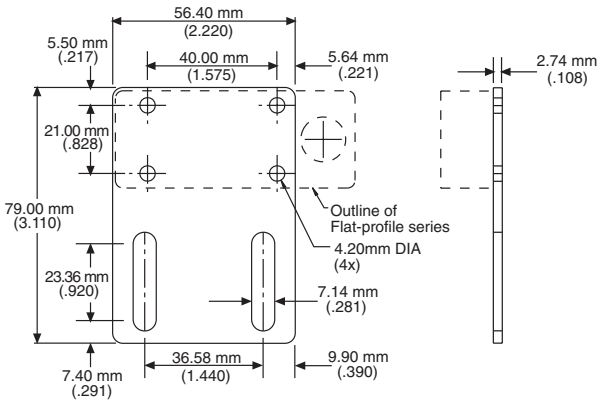
AC132 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)



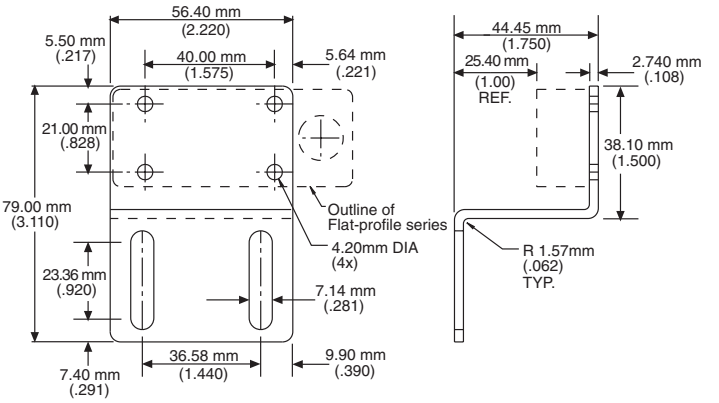
AC228 Small, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



AC231 Straight, stainless mounting bracket (for flat-profile sensors)



AC232 S-shaped, stainless mounting bracket (for flat-profile sensors)



General Specifications

Sensing

Ranges:
Up to 254 mm (10")
Spans:
From 3.18 mm (1/8") to 228.6 mm (9")
Window Position, Initial Accuracy:
± 1.59 mm (0.062") max.
Window Position Repeatability:
± 0.69 mm (0.027") max.
Detection Benchmarks:
Models with Ranges to 177.8 mm (7"):
1.59 mm (1/6") diameter rod at a distance of 63.5 mm (2.5")
Max. ±10° tilt of large flat object at a distance of 127 mm (5")
Models with Ranges from over 177.8 mm (7") to 254 mm (10"):
1.59 mm (1/6") diameter rod at a distance of 76.2 mm (3")
Max. ± 10° tilt of large flat object at a distance of 203.2 mm (8")
Sonic Frequency: 500 kHz
Sonic Cone Angle: 7° (see beam plot, page 4-72)

Power Requirements

Supply Voltage:
12 to 24 VDC ± 10%, regulated supply
Current Consumption:
Cable Model: 50 mA max. (excluding load)
Connector Model: 60 mA max. (excluding load)
Power Consumption:
1.0 W max. (excluding load)

Output

NPN Sinking: 0 to 30 V
Maximum on-state voltage at 100 mA: 0.2 volts
PNP Sourcing: 100 mA @ 24 VDC, max.

Response Time

"On" 3 ms, "Off" 3 ms (standard)
"On" 2.0 ms, "Off" 2.0 ms (optional)

Indicators

Green LED: Power "On"
Amber LED:
Cable model: "On" if object is detected within the window, regardless of output polarity (N.O./N.C.) style.
Connector model with built-in cable LEDs: "On" if NPN output is sinking

Connections

Cable Style Models:
24 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3 meters (10') long
Connector Style Models:
4-conductor, straight and right-angle "micro" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
0° to 60°C @ 12 VDC supply
0° to 50°C @ 24 VDC supply
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products

Agency Approvals

CE Mark: CE conformity is declared to:
EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group1 Class A.
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model: 18 mm dia. x 1 mm threaded housing x 65 mm (2.55") long
Connector Model: 18 mm dia. x 1 mm threaded housing x 102 mm (4") long, including connector/cable assembly
Flat-profile
Cable Model: 30 mm (1.182") H x 16.25 mm (0.640") W x 93 mm (3.66") L
Connector Model: 30 mm (1.182") H x 16.25 mm (0.640") W x 84.40 mm (3.322") L
Housing:
Shock and vibration resistant
Case: ULTEM®* plastic (FDA Approved)
(SS303 stainless steel available only in 18 mm barrel-style)
Transducer Face: Silicone rubber - gray
Sensor Cables: Lead-free PVC jacket, black (Model AC117)
LED: Polycarbonate

* ULTEM® is a registered trademark of The General Electric Co.

Accessories

18 mm Barrel Mounting Hardware and Cables

Model AC117, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') with built-in LEDs for barrel connector-style prox sensors
Model AC127, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') with built-in LEDs for barrel connector-style prox sensors
Model AC226, Stainless and polyamide conveyor-rail clamp/bracket set
Model AC227, Large, right-angle, stainless mounting bracket
Model AC228, Small, right-angle, stainless mounting bracket

Flat-profile Mounting Hardware and\ Cables

Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile, connector-style sensors
Model AC132, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile,connector-style sensors
Model AC231, Straight, stainless, mounting bracket
Model AC232, S-shaped, stainless, mounting bracket

See page 7-1 for accessory photos.

SUPERPROX® Ultrasonic Analog Output Sensors

- *High repeatability 500 kHz ultrasonic frequency*
- *Fast response - as fast as 2.0 ms sampling rate*
- *Self-contained, 18 mm barrel or flat-profile housing styles*
- *Field programmable capability in 18 mm and flat-profile models*
- *DeviceNet capability available in flat-profile models*
- *CE certified*

One tough little prox with an analog output

It is one of the smallest, fastest, most repeatable, analog sensors in the business. The SUPERPROX® Model SM606 series of analog sensors, incorporating the world's leading ultrasonic technology, offers reliable measurement and control of materials with fixed span limits within sensing ranges up to 254 mm (10"). These sensors continuously monitor the distance to an object and generate either a directly proportional or inversely proportional 0 to 10 volt or 4-20 mA output. The sensors detect objects of all colors and materials as small as 1.59 mm (0.0625") diameter, transparent or opaque, liquid or solid. The narrow 7° sonic beam allows the sensor to accurately detect levels in containers with openings as small as 9.52 mm (0.375").

With a response rate as fast as 2.0 ms on the 102 mm range model, the high resolution SM606 series sensors are capable of detecting rapidly changing object positions as small as 0.686 mm (0.027")at the rate of 667 samples per second. Typical applications include the checking and controlling of fluid levels, measuring speed and position of an object moving on a slide at rates in excess of 50 feet per second, and controlling a web of paper or fabric. Higher gain models can detect very thin materials like thread and wire.

The 18 mm barrel housing sensor is available in either ULTEM® plastic (standard) or SS303 stainless steel. The flat-profile housing is available in ULTEM® plastic only. The sensors are sealed to withstand dusty, dirty, clean-in-place, 100% humidity, high-pressure, and washdown environments.

For sensing applications requiring connection to a **DeviceNet** network, the flat-profile models in this series are available with this capability as an optional selection.

Operating on 15 to 24 VDC, the 500 kHz barrel housing/cable style sensors are equipped with an amber LED; the barrel housing/connector style sensors have two LEDs: amber and green. The flat-profile sensors, in both cable and connector style, have an amber LED. The amber LED increases in intensity as output voltage increases. The green LED indicates power is being supplied. With protection ratings of NEMA 4X (indoor use only) and IP67, the sensors resist most acids and bases, including most food products. The transducer face is made of silicone rubber.

Operation

The Model SM606 series is a self-contained, pulse-echo device that both transmits and receives sonic energy within its programmed sensing range. These sensors use the latest ultrasonic technology with a discriminating microprocessor that

allows the sensor to ignore all surrounding sonic interference and detect only the designated object. When an object is within the fixed analog sensing span, the analog output changes proportionally in relation to the analog sensing span limits. For example, if the object is halfway between the analog span limits, the output is 5 volts.

As shown below, Hyde Park offers both direct and inverse proportional analog output models for continuous sensing applications.

How does it work?

During setup and operation, these SM606 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the fixed span limits. These limits are shown in the illustration at right as Dwi and Dwo. If D is at or within the fixed span limits, an output value for D, relative to the analog sensing span limits, is generated.

Model Reference Guide - SM606 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM6 0 6 A - 4 48 - 00 S**

Ultrasonic Miniature Proximity Series

Power/Connection Type
0...15 to 24 VDC / cable style
5...15 to 24 VDC / "micro" connector style

Sensing Function
6...Analog

Design Level
A...Applies to all models

Sensing Range (Far Limit)
1 to 9...inches, not in fractions
B...254 mm (10")

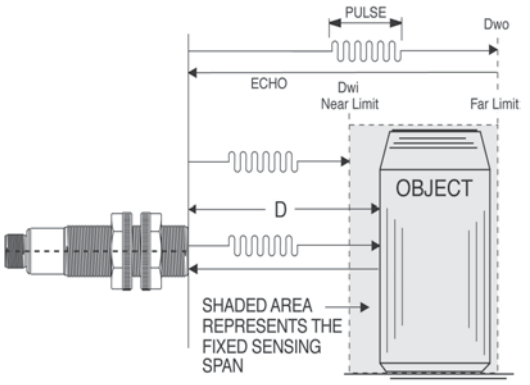
Sensing Span (Distance from Far Limit to Near Limit)**
08...13 mm (1/2")
16...25 mm (1")
32...51 mm (2")
48...77 mm (3")
80...127 mm (5")
96...152 mm (6")
OB...203 mm (8")

Output Configuration (4-20 mA must be in flat-profile model)
00...Inverse 0 to10 volts
01...Direct 0 to10 volts
03...Inverse 0 to 10 volts, loss of echo signal hold
06...Direct 0 to 10 volts, loss of echo signal hold
10...Inverse 4 - 20mA
11...Direct 4 - 20 mA
13...Inverse 4 - 20mA, loss of echo signal hold
16...Direct 4 - 20 mA loss of echo signal hold

Options
Contact factory for available options

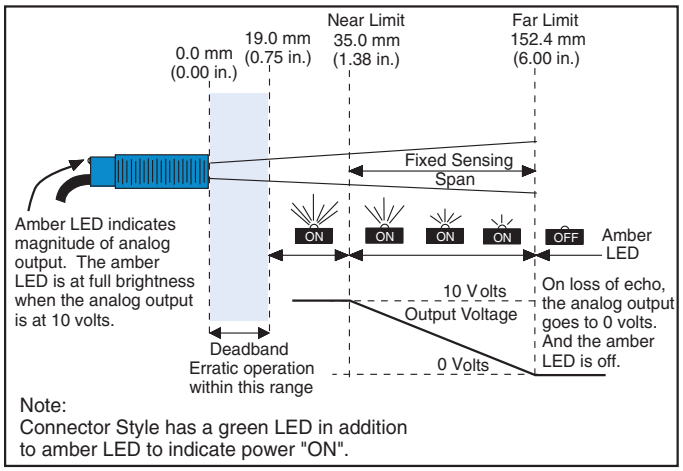
Housing Types
...No letter indicates standard ULTEM®* - 18 mm barrel housing
FP...ULTEM®* flat-profile housing

Field-configurable and **DeviceNet** Model Reference Guides start on page 4-145.



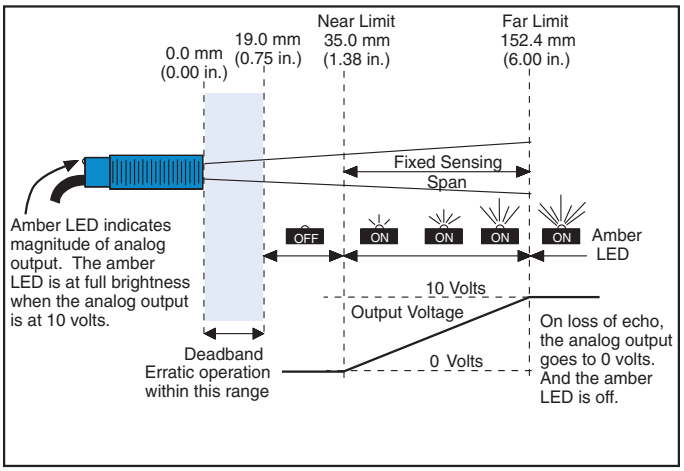
Direct Proportional Output

The analog signal value increases as the object moves closer to the near span limit.



Inverse Proportional Output

The analog signal value decreases as the object moves closer to the near span limit.



* Note: The Cable style sensors have an amber signal LED only; no green LED.

* Note: 4-20mA out put identical in Flat-Pack only.

** Available only in 102 mm (4") range models.

** Not allowed inside the deadband. Deadband is 0.75" for ranges < 7" and 1.25" for ranges > 7"

Loss of Echo Signal Hold Output Configuration

The sensor model with this configuration makes it possible, upon loss of echo signals, to hold at the analog signal value of the last echo received. When the sensor again receives echoes within its sensing range, the analog signal is updated to a value indicating the object's position at that moment relative to the span limits.

Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

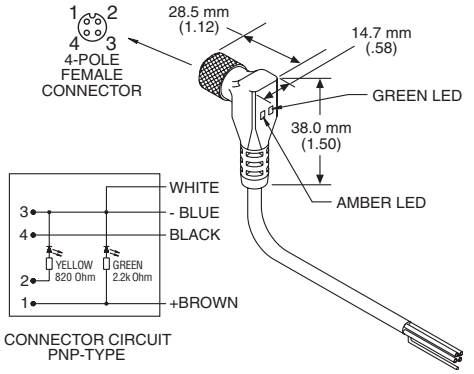
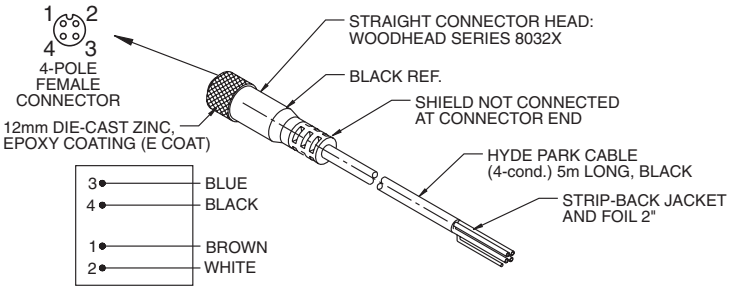
Mounting Accessories

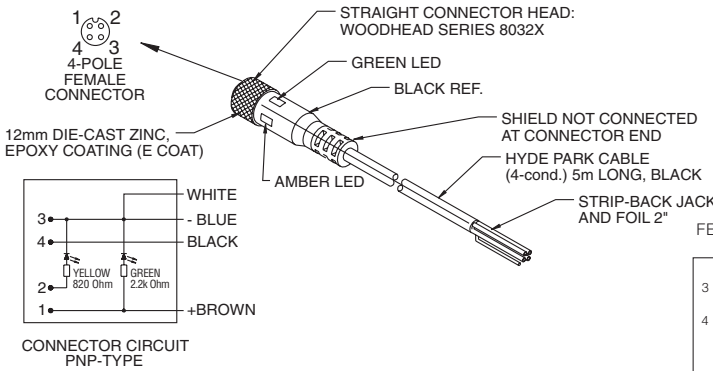
AC119 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



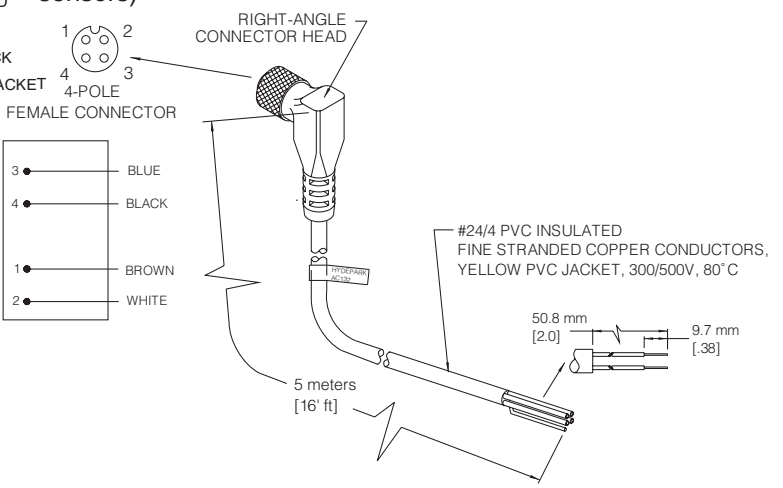
AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)



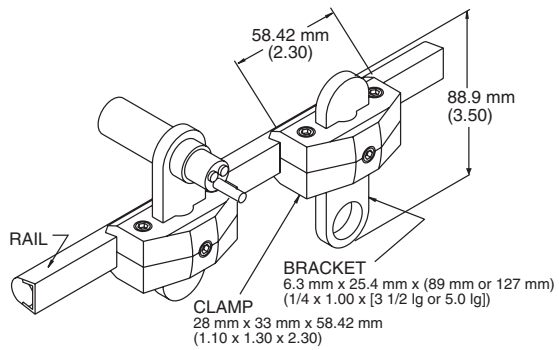
AC129 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



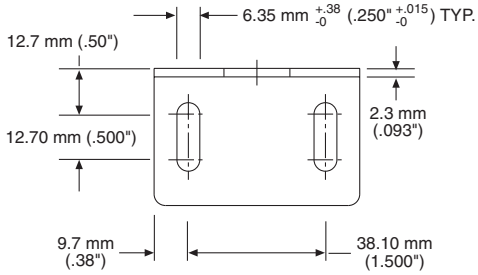
AC132 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)

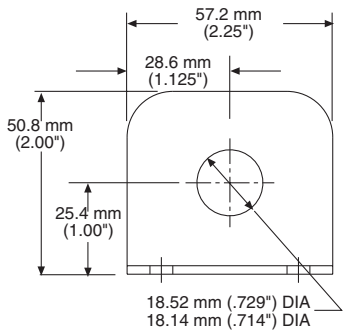


AC226 Stainless and polyamide conveyor-rail clamp/ bracket set (for 18 mm barrel sensors)

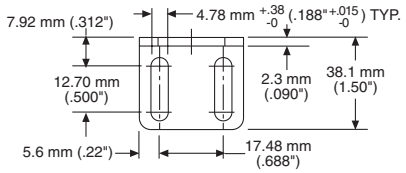


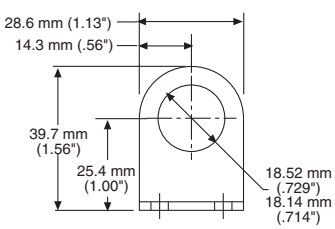
AC227 Large, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



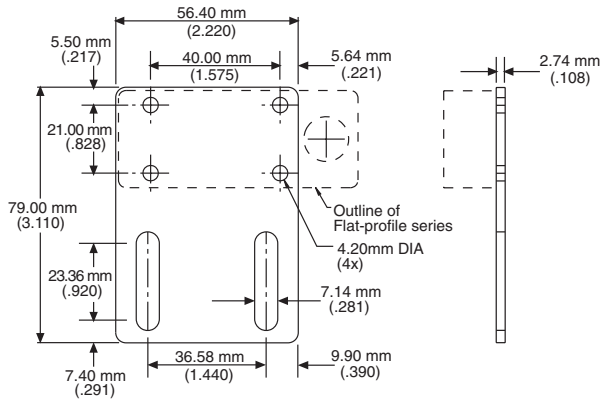


AC228 Small, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)

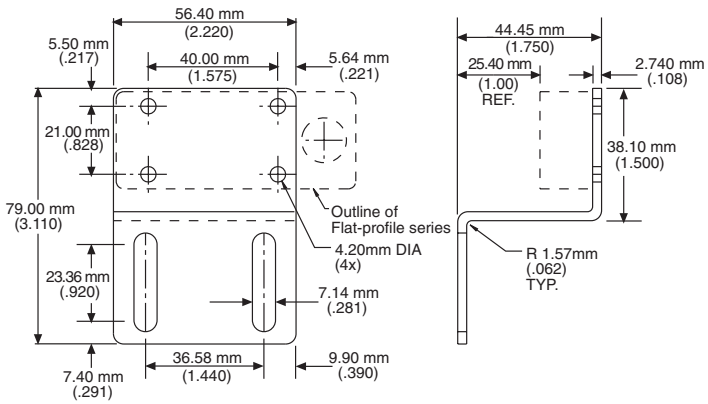




AC231 Straight, stainless mounting bracket (for flat-profile sensors)



AC232 S-shaped, stainless mounting bracket (for flat-profile sensors)



General Specifications

Sensing

Ranges:
Up to 254 mm (10")
Spans:
From 3.18 mm (1/8") to 228.6 mm (9")
Detection Benchmarks:
Models with Ranges to 177.8 mm (7"):
1.59 mm (1/6") diameter rod at a distance of 63.5 mm (2.5")
Max. ±10° tilt of large flat object at a distance of 127 mm (5")
Models with Ranges from over 177.8 mm (7") to 254 mm (10"):
1.59 mm (1/6") diameter rod at a distance of 76.2 mm (3")
Max. ±10° tilt of large flat object at a distance of 203.2 mm (8")
Position Sensing @ 20°C
Resolution, Position:
Voltage Model span/1023
Current Model span/818
but never less than 0.043 mm (0.0017") for either type
Resolution, Output:
Voltage Model 9.775mV
Current Model 15.6uA
Window Edge Position (either edge):
Error, maximum ±1.57 mm (0.062")
Repeatability, max. error ±0.381 mm (0.015")
Zero Offset:
Voltage Model +18mV/-11mV
Current Model 4mA +0.11mA/-0.141mA
Full Scale Offset, maximum:
Voltage Model ±43mV
Current Model +0.147mA/-0.300mA
Slope Error, maximum: 0.59% of Span (1% to 99% of Span)
Non-linearity, maximum: 0.76 mm (.030")
Temperature Compensation: -20° to 60°C
Position Error Due to Temperature Shift: ±01.59 mm (0.062")
Sonic Frequency: 500 kHz
Sonic Cone Angle: 7° (see beam plot, page 4-72)
Sensing Bandwidth (sinusoidal oscillation): 50 Hz

Power Requirements

Supply Voltage: 15 VDC to 24 VDC ± 10%, regulated supply
Current Consumption: 50 mA max. (excluding load)
Power Consumption: 1.2 W max. (excluding load)

Output

Voltage Model
Range: 0-10 VDC
Min. Load Resistance: 1000 Ohms
Current Model (flat-profile only)
Range:4-20 mA (0-20 mA optional)
Load Resistance: 0.1 to 350 Ohms

Response Time

2.5 ms (Standard)
2.0 ms (Optional)

Indicators

Green LED (connector model only): power
Amber LED (connector & cable models): intensity increases as output voltage increases

Connections

Cable Style Models:
24 AWG, foil shield, lead-free, PVC jacketed, 4-conductor, 3 meters (10') long
Connector Style Models:
4-pin, 12 mm "micro" style
LEDs not built into this sensor. Must use AC119 right-angle mating connector with built-in LEDs. No other mating connector cable may be substituted due to unique LED circuit impedance.

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
0° to 60°C @ 15 VDC supply
0° to 50°C @ 24 VDC supply
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: CE conformity is declared to: EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group1 Class A.
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model: 18 mm dia. x 1 mm threaded housing x 65 mm (2.55") long
Connector Model: 18 mm dia. x 1 mm threaded housing x 102 mm (4") long, including connector/cable assembly
Flat-profile
Cable Model: 30 mm (1.182") H
x 16.25 mm (0.640") H
x 93 mm (3.66") L
Connector Model: 30 mm (1.182") H
x 16.25 mm (0.640") W
x 84.40 mm (3.322") L
Housing:
Shock and vibration resistant
Case: ULTEM®* plastic (FDA Approved) (SS303 stainless steel available only in 18 mm barrel-style)
Transducer Face: Silicone rubber - gray
Sensor Cables: Nontoxic PVC jacket, food grade
LED: Polycarbonate

* ULTEM® is a registered trademark of The General Electric Co.

Accessories

18mm Barrel Mounting Hardware and Cables

Model AC119, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LED's for connector-style prox sensors
Model AC129, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LED's for connector-style prox sensors
Model AC226, Stainless and polyamide conveyor-rail clamp/bracket set
Model AC227, Large, right-angle, stainless, mounting bracket
Model AC228, Small, right-angle, stainless, mounting bracket

Flat-profile Mounting Hardware and Cables

Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat profile, connector-style prox sensors
Model AC132, Right angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile, connector-style sensors
Model AC231, Straight, stainless, mounting bracket
Model AC232, S-shaped, stainless, mounting bracket

SUPERPROX® Ultrasonic Proximity Sensors

Small Target Sensing

- *Fast response - 0.5 ms sampling rate*
- *Fixed sensing window*
- *Self-contained, 18 mm barrel or flat-profile housing styles*
- *Ideal for the precise detection of thin edges, as in labels and tamper-proof seals*
- *Field programmable capability in 18 mm and flat-profile models*
- *DeviceNet Capability available in flat-profile models*
- *CE certified*

This fast, high-gain, ultrasonic proximity sensor detects objects as small as 0.076 mm (0.003") in width at a speed of 400 inches per second.

Where very small target sensing applications require fast, repeatable, reliable, and precise on/off control, the high-frequency, fixed-window SUPERPROX® Model SM607 series ultrasonic proximity sensors are the ideal solution. Combining new and unique piezoelectric transducer and microprocessor technology, this "tough little prox" from Hyde Park combines high speed and high sensitivity in the reliable detection of very small objects and edges. This sensor series has fixed sensing windows as small as 3 mm (0.125") within sensing ranges up to 63.5 mm (2.5"). The sensor's advanced ultrasonic technology, the world's finest, allows for a deadband as short as 38.1 mm (1.5"), resulting in a quicker decay of "cross talk" and the capability of closer object detection. Another benefit of the technology is revealed in a sampling rate of 0.5 ms, 2000 samples per second and the detection of small reflective surfaces moving past the sensor at 400 inches per second.

For sensing applications requiring connection to a **DeviceNet** network, the flat-profile models in this series are available with this capability as an optional selection.

By virtue of its very high gain and speed, the SM607 noncontact sensor offers reliable detection of objects as small as 0.076 mm (0.003") thick or .0127 mm (0.005") diameter regardless of material, color, or shape. These include items such as thin wires, threads, floss, filaments, electrical connections, fine glue beads on box tops, bag seams, and clear optical extrusions. The high gain and speed work together to create a new edge detection system that can be used on high-speed container lines in detecting tamper-proof safety seals, labels, and caps. Other applications include detecting paper and film edges, tape on packages, web edges, bag seams, and wherever there's a need to upgrade a metal prox function. The sensors detect all materials, transparent or opaque, liquid or solid.

With protection ratings of NEMA 4X (indoor use only) and IP67, these sensors are impervious to changing light conditions, colors, noise, dust, 100% humidity, caustic chemicals, and other hostile environments. They are resistant to most acids and bases, including most food products. The sensing transducer is made of silicone rubber and the sensors are CE certified. Easy to install, the sensors are available in three different housing styles.

The 18 mm barrel housing sensors are available in either ULTEM® plastic (standard) or SS303 stainless steel. The "flat-profile" housing sensors are available only in ULTEM® plastic. With all SUPERPROX® sensors, cable and connector styles are available.

Operating on 12 to 24 VDC, these 500 kHz sensors are equipped with sinking type (NPN) and sourcing type (PNP) outputs, a green LED to indicate power "on" and an amber LED to indicate when the object is detected within the fixed window.

The Model SM607 barrel and

flat-profile-style proximity sensors are today's answer for very small object detection and improved productivity throughout the plant.

Operation

The Model SM607 series is a self-contained, pulse-echo device that both transmits and receives sonic energy over a sensing range of up to 51 mm (2"). These sensors use the latest ultrasonic technology with a discriminating microprocessor that allows the sensor to ignore all surrounding sonic interference and detect only the designated object. An object is detected when it is at or within the fixed sensing window.

How does it work?

During setup and operation, these SM607 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where: D = distance to the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the fixed window limits. These limits are shown in the illustration as Dwi and Dwo. If D is at or within the fixed window limits, an output change takes place and remains unchanged until the echo either does not return or it returns from outside the fixed window limits. As shown below, Hyde Park offers normally open (N.O.) or normally closed (N.C.) (sinking and sourcing) output models available for discrete on/off sensing applications.

Model Reference Guide - SM607 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

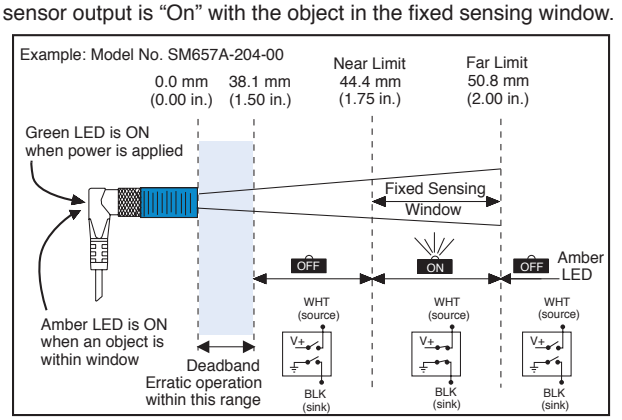
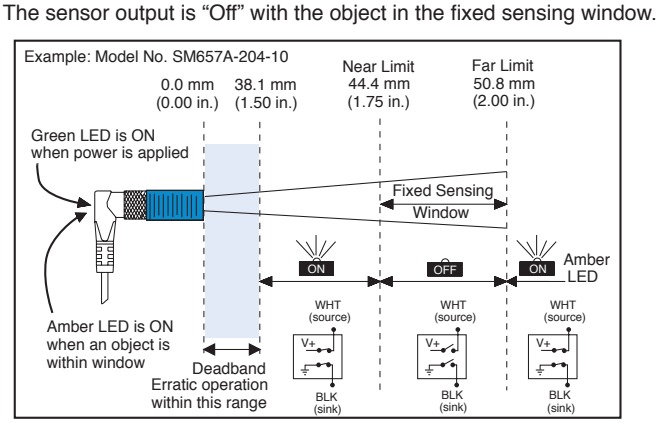
Normally Open Output

The sensor output is "On" with the object in the fixed sensing window.



Normally Closed Output

The sensor output is "Off" with the object in the fixed sensing window.



Mounting

The Model SM607 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment. Hyde Park offers the Model AC226 stainless and polyamide conveyor-rail clamp/bracket set, Model AC227 large, right-angle, stainless mounting bracket, Model AC228 small, right-angle, stainless, mounting bracket, Model AC231 straight, stainless, mounting bracket and Model AC232s-shaped, stainless, mounting bracket which are illustrated, with dimensions, on Pages 4-104 and 4-105.

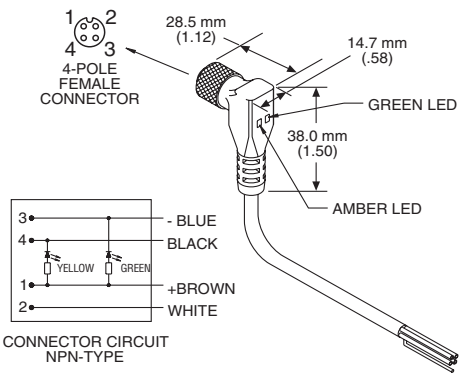
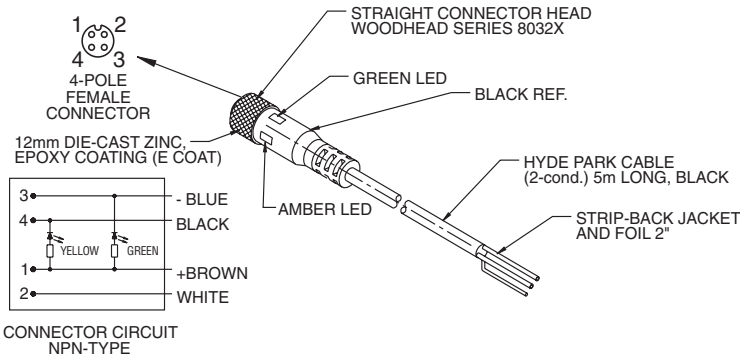
Mounting Accessories

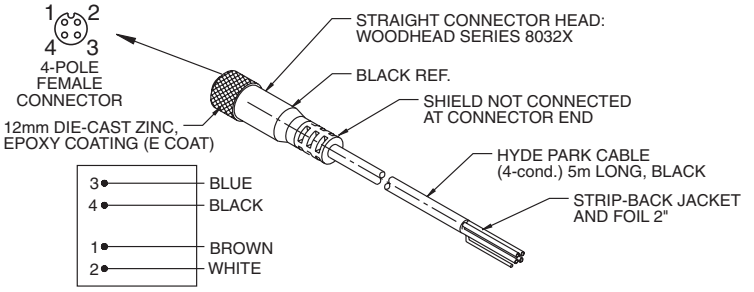
AC117 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



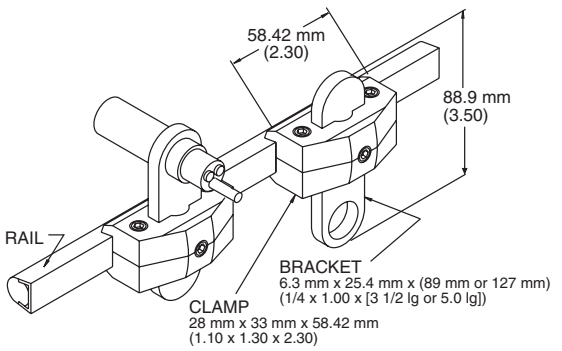
AC127 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for barrel connector-style sensors)



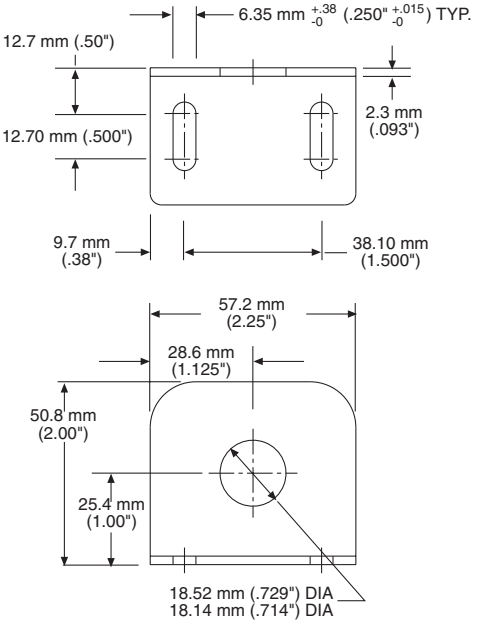
AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for flat-profile connector-style sensors)



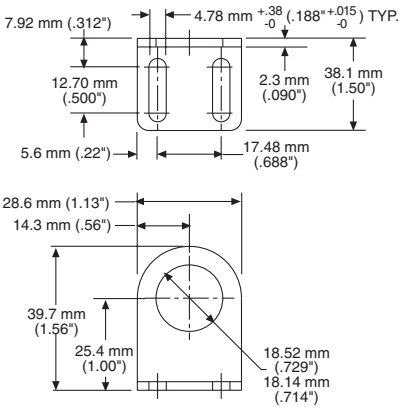
AC226 Stainless and polyamide conveyor-rail clamp/bracket set (for 18 mm barrel sensors)



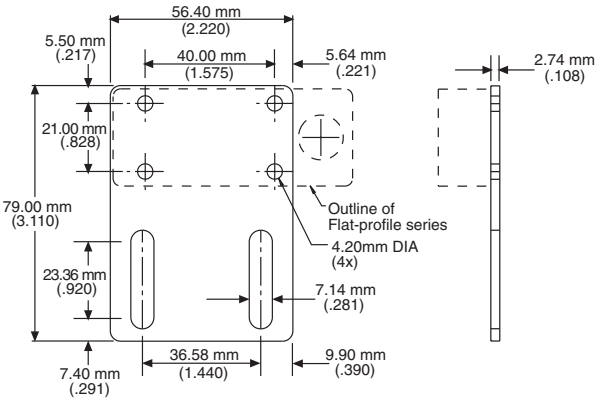
AC227 Large, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



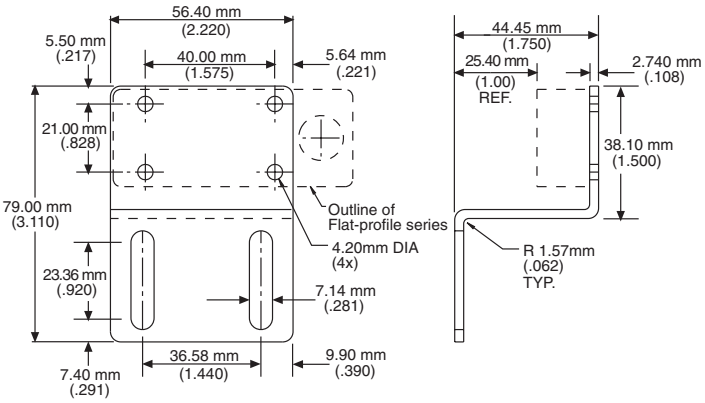
AC228 Small, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



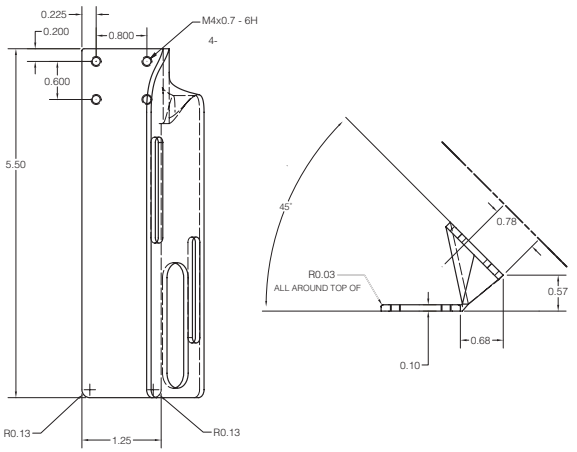
AC231 Straight, stainless mounting bracket (for flat-profile sensors)



AC232 S-shaped, stainless mounting bracket (for flat-profile sensors)



AC241 Steel/black oxide, 45° angle, label edge mounting bracket used with SUPERPROX SM6X7A-A08-01FP or SM6X7A-A08-11FP flat-profile label sensors



Outputs

NPN Sinking and PNP Sourcing Connector Style Pin Assignments

General Specifications

Sensing

Ranges:
Up to 51 mm (2")
Spans:
From 3.18 mm (1/8") to 38.1 mm (1.5")
Window Position, Initial Accuracy:
± 1.59 mm (0.062")
Window Position Repeatability:
± 0.69 mm (0.027")
Detection Benchmarks:
0.076 mm (0.003") width at a distance of 51 mm (2")
Sonic Frequency: 500kHz
Sonic Cone Angle: 7° (see beam plots, page 4-72)

Power Requirements

Supply Voltage:
12 to 24 VDC ± 10%, regulated supply
Current Consumption:
70 mA max. (excluding load)
Power Consumption:
1.7 W max. (excluding load)

Output

NPN Sinking: 0 to 30 V, 100 mA max.
The sinking output is "off" when the sensor is not detecting an object (N.O.)
PNP Sourcing: 0 to 30 V, 1 A max.
The sourcing output is "off" when the sensor is not detecting an object (N.O.)

Response Time

"On" 0.5 ms, "Off" 0.5 ms

Indicators

Green LED: power "on"
Amber LED: "on" if object is detected within the window, regardless of output polarity (N.O./N.C.) style. Connector model using cable with built-in LEDs: "on" if NPN output is low.

Connections

Cable Style Models:
24 AWG, foil shield, lead-free, PVC jacket, 4-conductor, 3 meters (10') long
Connector Style Models:
24 AWG, foil shield, lead-free, PVC jacket 4-conductor, right angle "micro" style

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current.

Environmental

Operating Temperature Range:
0° to 60°C @ 12 VDC supply
0° to 50°C @ 24 VDC supply
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: CE conformity is declared to:
EN61326:1997 (annex A, industrial) including amendment A1:1998. EN55011 Group1 Class A.
Declaration of Conformity available upon request

Construction

Dimensions:
Barrel
Cable Model: 18 mm dia. x 1 mm threaded housing x 65 mm (2.55") long
Connector Model: 18 mm dia. x 1 mm threaded housing x 102 mm (4") long
Flat-profile
Cable Model: 30 mm (1.182") H
x 16.25 mm (0.640") W
x 93 mm (3.66") L
Connector Model: 30 mm (1.182") H
x 16.25 mm (0.640") W
x 84.4 mm (3.322") L
Housing:
Shock and vibration resistant
Case: ULTEM®* plastic - (FDA Approved) (SS303 stainless steel available only in 18 mm barrel-style)
Transducer Face: Silicone rubber - gray
Sensor Cable: Lead-free PVC jacket, black (Model AC117)
LED: Polycarbonate

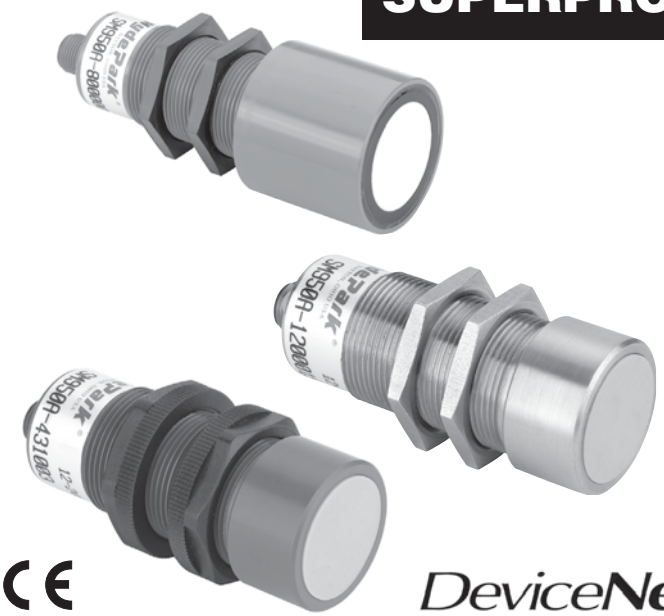
SUPERPROX® 900 Series Introduction



30 mm Ultrasonic Sensors

SUPERPROX® Model SM900 Series
Proximity sensing without a delay

SUPERPROX® Model SM902 Series
Dual-level sensing with on & off latch control

SUPERPROX® Model SM906 Series
Level/distance sensing with analog output

- ***Field programmable capability***
- ***DeviceNet capability***
- ***CE certified***

Broad model selections in new SUPERPROX® 30 mm series bring convenience and cost-effective sensing to specific applications

Using the same world-leading ultrasonic technology perfected and proven in the versatile SUPERPROX® 500 series, three new 30 mm series sensors broaden the list of reliable Hyde Park sensing solutions. With this SUPERPROX® 900 series, the design engineer, maintenance manager, and other professionals can easily select a "smart" ultrasonic sensor specifically configured for an application.

The applications cover those requiring either proximity sensing with on/off output, dual-level sensing with on/off latch control, or continuous level/distance sensing with analog output. Depending on the specific sensing application, 1 meter, 2 meter, and 8 meter sensing range models are available with specific sensing functionality. These models offer a variety of output modes and types, response times, features, and options. Threaded, barrel-style housings, available in either ULTEM® plastic or SS303 stainless steel, make installation quick, especially in those areas where mounting is often difficult. All the 30 mm sensors are CE certified.

For sensing applications requiring connection to a **DeviceNet** network, all models in this series are available with this capability as an optional selection.

The SM900 series continues the long tradition of providing sensing solutions where other sensing technologies have not met demanding standards for reliability and productivity. With these 30 mm sensors, the same degree of reliability is assured in the detection of most objects regardless of material. Harsh environments, high-speed runs, caustic cleaning solutions, and frequent washdowns are often the rule, not the exception, for this rugged, self-contained, sensor line. Like other Hyde Park sensors, this series has protection ratings of IP67 and NEMA 4X (indoor use only), providing resistance to most acids and bases, including most food products. They are sealed against dust, noise, and other hostile environments. Without exception, all three 30 mm series models can be counted on day in and day out for the reliable detection of objects whether they are transparent or opaque, liquid or solid;regardless of color or shape.

Field Programmable Sensor Models

SUPERPROX+ software combined with the Model AC441A configurator interface module enables the SC900 series sensors to be programmed by the user with either standard or custom sensing configurations. These field programmable sensors use an 'SC' prefix in the model number to designate and differentiate the sensors from factory configured SM900 series models.

All the unique sensing capabilities and functions available in the SM900, 902, and 906 sensor series are also available in field programmable SC900/906 model versions. An even greater sensing capability in functionality is realized with these field programmable sensor models through the user-friendly SUPERPROX+™ software to allow customization for specific applications.

For more details on the Model SC900 series and other field programmable sensor models along with the Model AC441A configurator interface module go to the SUPERPROX+™ section found on page 4-143 in the catalog.

Operation

Like the SUPERPROX® 500 series sensors, the 30 mm models are pulse-echo devices that both transmit and receive sonic energy within selected sensing ranges. A unique combination of advanced ultrasonic sensing technology and a discriminating microprocessor and push-button setup program enables the detection of only those objects within a set "window" or span while ignoring all surrounding interference. When the object to be detected is at or within the user-set window limits, either a discrete output switches or an analog output changes proportionally with respect to analog span limits set by the user.

Easy to Set Up

Convenience in setting up the SM900 series sensors for operation begins with the ease in which the sensors can be mounted in the proper position. Whether placed in a bracket close to the object or through a vessel cover several feet above the object, the sensor is quickly secured using a pair of jam nuts. Depending on the model series selected, a single push-button at the rear of the sensor is used to set either the near and far window limits, the dual-level limits,or the analog span limits.

To set the limits, a target or object is placed in front of the sensor successively at the set points representing the desired near (Dwi) and far (Dwo) limits shown in the illustration. When the push-button is pressed at each set point, the respective distances (Dwi and Dwo) from the sensor are stored in the sensor memory to represent the sensing window limits.

For long distances or tall-tank applications where the long-range (8 meter) sensor's push-button setup is not practical, an optional hand-held, configuration accessory (AC441A) is available to use in setting the window limits and configuring the sensor's functionality for operation.

Located next to the sensor's push-button is a pair of LED's. The multicolor LED is used to indicate setup and operational status; the amber LED is used to indicate the status of the output.

The sensor outputs, whether discrete or analog, are compatible with most logic control systems and programmable controllers.

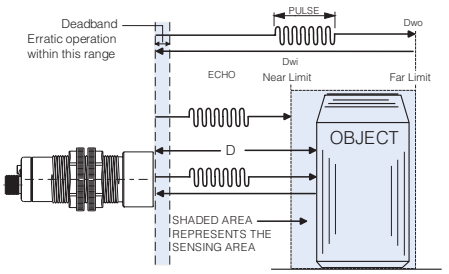
How does it work?

During setup and operation, the SM900 series sensors continually and accurately measure the elapsed time of every pulse transmission. The transmitted pulse begins a time clock to determine the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object and back to the sensor, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; Vs = velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the set limits. The operation (discrete and analog) depends on the model number.

Applications

For applications specific to the three series of SM 900 series sensors, see either the product information sections



that follow or the Application / Sensor Selection Chart on Page 2-1.

Beam Plots

The following plots developed from data collected at 20°C and zero air flow, define the boundaries and shape of the sonic beam for the SM 900 series sensors.

For the 1 and 2 meter series the boundaries were established using a 10 cm x 10 cm (3.94" x 3.94") "target" positioned parallel to the sensor face. The plot for each sensor series is valid for targets equal to or larger than 10 cm x 10 cm. Beam boundaries are determined by moving the large flat target into the beam while the plane of the target is held perpendicular to the beam axis.

The same is true for the 8 meter series with the exception that the target is 30 cm x 30 cm (12" x 12").

In each sensor series, the plot extends from the end of the "deadband" on the left to the end of the sensing range on the right. The sensor is illustrated in the middle left margin.

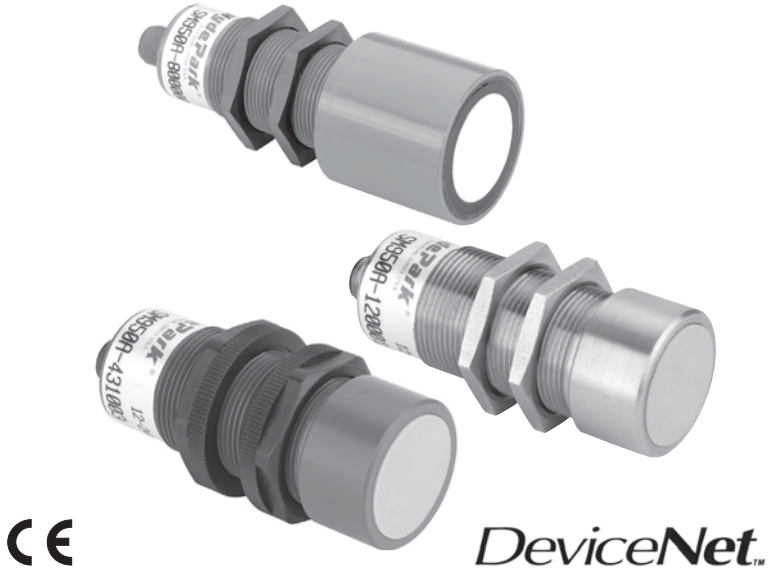
SUPERPROX® Ultrasonic Proximity Sensors

Up to 8 Meter Range Proximity Sensing

- *Sensing ranges of 1 m (39"), 2 m (79"), and 8 m (26')*
- *Reliable detection with simple on/off control of the output*
- *Easy push-button setup or optional hand-held setup/ display accessory available for all*
- *Self-contained, 30 mm barrel, in either ULTEM® plastic or SS303 stainless steel housing*
- *Resistant to caustic materials and harsh environments*
- *Field programmable capability*
- *DeviceNet capability*
- *CE certified*



CE DeviceNet™

30 mm ultrasonic proximity sensors offer model selections for range, output type, response time, default window, and transducer face

Whether the object being detected is just a few inches from the sensor or as far away as 26 feet, or the application calls for a specific sensor configuration, the SUPERPROX® Model SM900 series of ultrasonic sensors offers a variety of proximity sensing solutions. There is the mounting convenience of a 30 mm housing, sensing ranges of 1 m (39"), 2 m (79"), and a long-range 8 m (26'), the shortest deadbands in the sensing industry, and unique factory configurability to meet the user's needs. In addition to sensing ranges, model selections include normally-open or normally-closed NPN and PNP outputs, complementary NPN or complementary PNP outputs, and a variety of response times and default sensing window setup limits. By using the Model Reference Guide to select the specific model required, the user is assured of a reliable, cost-effective proximity sensing solution for a multitude of applications.

All models in this series are equipped with a push-button to set the limits for the sensing "window." When it is impractical to use the push-button for setting long-range sensing limits, an optional, hand-held, setup/display accessory is available. All limits are stored in nonvolatile memory and thus are retained if power is removed from the sensor.

The sensors are available in either ULTEM® plastic or SS303 stainless steel housings. Both housings are sealed to withstand dusty, dirty, clean-in-place, non-condensing humidity, and high-pressure washdown environments. Unlike other sensing technologies, these sensors are capable of detecting all materials regardless of color, shape, and composition (transparent or opaque, liquid or solid) including clear glass, powder, food products, metal, plastics, and objects that change colors. They are virtually unaffected by changing light conditions, colors, and noise. Packaged in a 30 mm, threaded housing with jam nuts, the Model SM900 sensors are easily mounted in normally tough-to-install areas of the plant. With protection ratings of NEMA 4X (indoor use only) and IP67, the sensors resist most acids, bases,and oils, including most food products. All the sensors in this model series are CE certified. Additionally, the Model SM900 series sensors offer compatible integration with most programmable logic controllers.

1 meter and 2 meter models

The standard 1 meter and 2 meter models are identified in the Model Reference Guide as the Model SM900A-1 and Model SM900A-4 sensors, respectively. These models provide for proximity sensing as close as 50.8 mm (2") from the sensor within the 1 m (39") range and 120 mm (4.7") from the sensor within the 2 m (79") range. To ensure ease of mounting, the length of the connector model, excluding the connector/cable assembly, is just 96 mm (3.78"). These sensors operate on a sonic frequency of 200 kHz and are available with response times as fast as 10 ms. The transducer face is made of FDA approved silicone rubber.

For proximity-sensing applications in severe, corrosive-type environments, the Model SM900A-7STS sensor has an SS303 stainless steel housing and is equipped with an SS304 stainless steel-faced transducer. This model series with a sensing range of 120 mm to 1 m (4.7" to 39"), provides reliable operation in either the detection of certain chemicals and corrosive materials or where caustic cleaning solutions are used in washdowns of machinery and equipment in close proximity to the sensor. For out-of-doors proximity-sensing applications, where cold weather is a factor, this corrosion-resistant model series provides reliable operation in temperatures as low as -20° C (-4° F).

8 meter, long-range models

No other proximity sensor has the combination of short deadband, long sensing range, and small housing package as does the Model SM900A-8 series of long-range, ultrasonic sensors. Configurable for long-range proximity sensing applications requiring a simple on/off output, these ultrasonic sensors detect objects of all materials over a sensing range from just 203 mm (8") to 8 m (26'). With the length of the cable model only 116.31 mm (4.579"), a fraction of the length of other long-range sensors, these sensor models are easy to mount in covers and tight spaces in the plant. They operate on a sonic frequency of 75 kHz with a standard response time of 200 ms. A response time of 100 ms is also available. An epoxy transducer face allows the fully encapsulated sensor to perform in a wide range of harsh environments, including those involving most acids, bases, and oils.

Model Reference Guide - SM900 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

Field configurable and **DeviceNet** Model Reference Guides start on page 4-145.

Applications

Applications for these long-range proximity sensors extend to most every industry or business requiring reliable detection within the range of 8 meters (26 feet). By virtue of the 75 kHz frequency, the sensor's wide, 20° beam is especially effective in detecting objects with a variety of surface profiles. In applications where high sound absorption conditions exist in the material being sensed, and either the one or two meter range model sensor becomes unreliable because of lost energy, the more powerful long-range SM900A-8 can provide the solution when used in the shorter-range distances.

Temperature compensation allows these sensors to operate reliably in outdoor applications in temperatures ranging from -20° to 60° C (-4° to 140° F).

Operation

The Model SM900 series is a self-contained, pulse-echo, proximity sensing device that both transmits and receives sonic energy within specified sensing ranges. Operating on 12 to 24 VDC, and employing the latest piezoelectric and microprocessor technology, these sensors detect only those designated objects within a set "window" and ignore all surrounding sonic interference.

Prior to operation, a simple and easy push-button "teach" function is used to set the sensing window limits. The near and far limits of a desired sensing window can be set anywhere within the sensing range and may be set to either encompass the full sensing range or be as small as desired. The push-button setup allows a window to be set as small as 2.54 mm (0.10") within the 1 and 2 m ranges and, depending on ambient conditions, a window within the 8 m range can be as small as 102 mm (4.0"). A double press of the SETUP push-button makes possible the setting of a default window anywhere within the sensing range.

The sensors are equipped with a multicolor sensing status LED and an amber LED. The amber LED shows the state of the output. When the output is active, the amber LED is on. When the output is not active, the amber LED is off. The multicolor LED indicates the position of the object relative to the sensing window limits: green when the object is inside the window; red when the object is outside the window; and off when the object is outside the sensing range.

Two different sensing program configurations, both employing foreground and background suppression, are available in the SM900 series, depending on the sensing application.

The standard sensing configuration, used in most proximity sensing applications, calls for the sensor to operate in a "background sensing mode." In this mode, the sensor can detect objects either directly or retroreflectively by doing a break-beam technique with a fixed background target. When objects are of irregular shape or non-repeatable orientation, break-beam sensing with a fixed background target should be used. After the sensing window is set to sense an object or the background target, the sensor continually transmits sonic pulses.

When the first pulse echo is received after each transmission pulse, the sensor shuts off its receiver and interrogates the elapsed travel time of the received first echo to determine whether the object is in or out of the sensing window. The sensor's receiver then waits for the next echo to interrogate. When either no echo is received, or the first echo received off an object travelsa lesser or greater distance than the window distance, the sensor determines there is no object present. When sensing objects by break-beam with a fixed background target, the sensor determines there is no object present whenever receiving echoes off the background target.

An optional "object sensing mode" configuration is recommended when the sensor must sense objects beyond a foreground surface having an opening that permits reception of the pulse echoes. An example would be the sensing of an object through a grid or inside a narrow opening. Sensing in this mode is done by setting the sensing window limits beyond the foreground surface. During operation, the sensor receives all pulse echoes from objects in front of it, including the foreground surface, without interruption. But, in this mode, the discriminating microprocessor permits the sensor to accept only those pulse echoes from objects that are within the sensing window limits and ignore any foreground objects.

Exception: Multiple echoes received off objects at either 1/2 or 1/4 distances from the sensor to the window may be accepted or confused as an object in the sensing window. This is avoided by mounting the sensor in a position where this condition cannot exist.

Setting the Window Limits

Located on the backside of the sensor, the SETUP push-button is used to set both the near and far window limits within which the sensing is to take place. Before the limits are set, the sensor must be properly aligned with the object to be detected.

To set the near and far limits, depress the SETUP push-button (the multicolor LED rapidly flashes amber to indicate the push-button is being pressed) until the multicolor LED flashes green in about 3 seconds, and then release the SETUP push-button. The multicolor LED continues flashing green indicating the sensor is waiting for the first window limit. Align a flat object parallel to the sensor face at the desired distance position for either (near or far) window limit, and press the SETUP pushbutton once. Upon release of the SETUP push-button, the multicolor LED flashes amber indicating the first window limit is set and the sensor is waiting for the second window limit. Align a flat object parallel to the sensor face at the desired position for the second window limit and press the SETUP push-button once. Upon release of the SETUP push-button, the multi-color LED turns to the color that indicates where the object is located. The sensor has no time-out for setting limits.

While the SETUP push-button is depressed in setting either the first or second window limit, the multicolor LED will turn amber to indicate the sensor detects the object. If the sensor does not detect the object, the multicolor LED will turn red while the push-button is depressed and flash red 2 seconds when it is released. After the LED flashes red 2 seconds, it will either flash green if the sensor is requesting the first window limit again or flash amber if the sensor is requesting the second window again.

A special feature of these sensors allows the user to set an automatic default window of fixed size anywhere within the sensing range. For the 1 and 2 meter range models, the standard default window is 12.7 mm (0.50"). It is127 mm (5.00") for the 8 meter range models. Other default window sizes are available for all the models upon request. To easily set the default window, while the multicolor LED is flashing green, align a flat object parallel to the sensor face at the center of the desired window and press the SETUP push-button twice in succession without moving the object. An automatic default window limit will be set at a distance equal to half the default window in front of and behind the flat-object surface nearest the sensor. If, for example, the functionality of the 1 or 2 meter range sensor calls for the standard default window, the sensing window is set with limits 6.35 mm (0.25") in front of and behind the object's front surface.

For long distances or tall-tank applications, when the sensor's push-button is not practical, an optional, Model AC441A Handheld Con-figurator can be used to set or change the near and far window limits and display the object distance when the sensor is located up to 200 feet from the user. The Model AC441A cannot, however, be used to set the default window.

Once set, the window limits are saved in nonvolatile memory and thus are retained when power is removed from the sensor.

How Does it work?

During setup and operation, these SM900 series sensors continually and accurately measure the elasped time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elasped times for the received pulse echoes. Given the elasped time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula, D = TVs/2, where: D = distance from the sensor to the object; T = elasped time betweem the pulse transmission and its echo receptions; Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances associated with the window limits. These limits are shown in the illustration at lower right as Dwi and Dwo.

If D is within these limits, an output is generated. The output remains on

Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

General Specifications

Sensing [TA = 20° C (68° F)]

1 and 2 meter ranges

Model Sensing Ranges
51 mm to 1 m (2.0" to 39")
120 mm to 1 m (4.7 to 39")**
120 mm to 2 m (4.7 to 79")
Sonic Frequency: 200 kHz
Minimum-size Detection
(Model SM900A-1):
1.59 mm (0.0625") diameter rod up to 635 mm (25") distance from sensor
Maximum Angular Deviation:
± 10° on 305 mm x 305 mm (12" x 12") flat target at a distance of 305 mm (12")
Sonic Cone Profile: See Beam Plots, Page 4-109
Limit Adjustment Resolution: 0.08 mm (0.003")
Repeatability: ± 0.8716 mm (0.03431") max.
Temperature Compensated

Power Requirements

Supply Voltage:
12 to 24 VDC ± 10% excluding output load (regulated supply)
Current Consumption: 100 mA max., excluding load
Peak Inrush Current: 0.50 Amp
Power Consumption: 1.2 W max., excluding load

Outputs

Sinking Output (NPN):
Maximum on-state voltage @ 100 mA: 0.37 volt
Maximum load current: 100 mA
Maximum applied voltage: 35 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop @ 100 mA: 0.50 volt
Maximum load current: 100 mA

Response Times - Minimum, Standard

10 ms on/off, 20 ms on/off (1 m range models)
15 ms on/off, 30 ms on/off (2 m range models)
Other response times are available.

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates limits setup and operational modes.
Amber LED: Visual indicator for sensor output; illuminated when output is in an active (on) state.

Connection Options

Cable Style: 24 AWG, foil shield, lead-free PVC jacketed, 4-conductor, 3 meters (10') long, standard
Connector Style: 12 mm, 4 pole, male

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current
NOTE: This sensor is ***NOT RATED EXPLOSION PROOF.***

Environmental

Operating Temperature Range: 0° to 50°C (32° to 122°F) for silicone-faced models - 20° to 50°C (-4° to 122°F) for stainless steel-faced models
Storage Temperature Range: -20° to 80°C (-4° to 176°F) for silicone-faced models -50° to 80°C (-58° to 176°F) for stainless steel-faced models
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Unaffected by most acids, bases, and oils.
Fluorosilicone- and stainless steel-faced transducers available for severe,

corrosive-type environments.

Construction

Dimensions:
Cable Model: 30 mm (1.181") dia. x 1.5 mm - 6g threaded housing x 94.95 mm (3.738") mm long, including 34.70 mm (1.365") dia. x 20.10 mm (0.790") long sensing head
Connector Model: 30 mm (1.181") dia x 1.5 mm-6g threaded housing x 95.99 mm (3.779") long; 117.15 mm (4.612") long, including AC 132 right-angle, M12 micro, connector / cable assembly; 125.00 mm (4.921") long, including AC130 straight, M12 micro, connector/cable assembly; sensing head dimension same as cable model.
Housing: Epoxy encapsulated to resist shock and vibration
Case: ULTEM®* plastic (FDA Approved) or SS303 stainless steel
Transducer Face: Silicone rubber - gray
SS304 stainless steel, 0.051 mm (0.002") thick**
Sensor Cables: Lead-free, black PVC jacketed

Agency Approvals

CE Mark: CE conformity is declared to:

SUPERPROX® Ultrasonic Dual-level Sensors

Up to 8 Meter Range Dual-Level Sensing

- *Sensing ranges of 1 m (39"), 2 m (79"), and 8 m (26')*
- *Easy push-button setup or optional hand-held setup/ display accessory available for all*
- *Dual-level on/off latch output*
- *Dual setpoint on/off outputs*
- *Epoxy sealed in tough ULTEM® plastic or stainless steel housing*
- *Resistant to caustic materials and harsh environments*
- *Field programmable capability*
- *DeviceNet capability*
- *CE certified*

Up to 8 meter (26 feet) level control, mounting convenience and broad functionality in this new 30 mm, dual-level sensor series

The world's leading ultrasonic technology now makes possible discrete level control in vessels, tanks, hoppers, bins, and reservoirs covering object distances a few inches from the sensor to as far away as 26 feet. Depending on the model selected and material being detected, the SUPERPROX® Model SM902 series of "smart" dual-level sensors offers sensing ranges of 1 m (39"), 2 m (79"), and a long-range 8 m (26'), with the shortest deadbands in the sensing industry of 51 mm (2"), 120 mm (4.7"), and 203 mm (8"), respectively. In addition to range selection,the sensors can be factory configured for a specific level-control function, output type, response time, and functionality. Using these selections, an ideal solution can be found for such operations as starting and stopping a pump and opening and closing a valve. Others include controlling either loop levels or tension on web processing lines relative to two set level control limit points. Packaged for mounting convenience in a threaded 30 mm housing up to 60% smaller than other level sensors with equal functionality, these dual-level sensors are easily installed, without positioning limitations, in covers and other hard-to-mount areas. All models are equipped with a push-button to set the sensor's near and far limits of the sensing "window." When it is impractical to use the push- button for setting long-range limits, an optional, hand-held AC441A, setup/display accessory is available. All limits are stored in nonvolatile memory and thus are retained if power is removed from the sensor.

Unlike other sensing technologies, these sensors are capable of detecting all materials whether, liquid, granular, or solid, and regardless of color, shape, or composition, transparent or opaque, including powder, food products, grains, chemicals, pharmaceuticals, oils, plastics, and objects that change colors. The sensors are available in either ULTEM® plastic or SS303 stainless steel housings which are fully encapsulated to withstand shock and vibration. Both are sealed to withstand dusty, dirty, clean-in-place, noncondensing humidity, high-pressure washdown environments, and they are virtually unaffected by changing light conditions, colors, and noise. With housings that meet NEMA 4X (indoor use only) and IP67 industry standards, the sensors resist most acids, bases, and oils, including most food products. All the sensors in this model series are CE certified. Additionally, the Model SM902 series sensors offer dependable operation and compatible integration with most programmable logic controllers.

1 meter and 2 meter range models

In the Model Reference Guide, the standard 1 meter range models are identified as the Model SM902A-1 and SM952A-1 series sensors, and the 2 meter range models are identified as the Model SM902A-4 and SM952A-4 series sensors. Respectively, these models provide for dual-level sensing from 50.8 mm to 1 m (2" to 39") and 120 mm to 2 m (4.7" to 79"). The length of the connector model, excluding the connector/cable assembly, is just 96 mm (3.78"), thus adding to the mounting convenience. These sensors operate on a sonic frequency of 200 kHz and are available with response times as fast as 150 ms. The FDA approved silicone rubber transducer face, while used to couple the ultrasonic energy to the air,is also resistant to most acids, bases, oils, and food products.

For dual-level-control sensing applications that involve severe, corrosive-type environments, the Model SM902A-7STS and SM952A-7STS sensors have an SS303 stainless steel housing with an SS304 stainless steel-faced transducer. These models, with a sensing range of 120 mm to 1 m (4.7" to 39"), provide reliable operation in the detection of certain strong chemicals and corrosive materials, where caustic cleaning solutions are used in washdowns of machinery, and where equipment is in close proximity to the sensor. For out-of-doors, dual-level-control sensing applications where cold weather is a factor, these corrosion-resistant models provide reliable operation in temperatures as low as -20°C (-4°F).

Non-level control applications ideally suited for these sensors within the 1 and 2 meter ranges include container accumulation detection on mass conveyors and controlling either loop positions or tension on web processing lines relative to two set control limits.

8 meter, long-range models

No other discrete, level-control sensor on the market combines a short deadband, and a long sensing range, housed in as small a package as the Model SM902A-8 and Model SM952A-8 series of long-range, ultrasonic, dual-level sensors. As indicated in the Model Reference Guide, these 30 mm sensors detect objects over a sensing range of just 203 mm (8") to 8 m (26'). The 116.31 mm (4.579") length of the cable model, a fraction of the size of other long-range sensors, ensures easy installation. The sensors operate on a sonic frequency of 75 kHz with a standard response time of 1 second, with other response times available. The transducer face of the fully encapsulated sensor is made of epoxy which, in addition to coupling the ultrasonic energy to the air, allows the sensor to perform in a wide range of harsh environments including those involving most acids, bases, and oils.

Applications for these long-range, dual-level sensors can be found in almost every industry or business when reliable detection within the range of 8 meters (26 feet) is required. By virtue of the 75 kHz sonic frequency, the sensor's wide, 20° beam is especially effective in sensing the levels of various types of liquids, solids, and granules as close as 203 mm (8") from the sensor's face. These applications include the processing of food and beverage products and pharmaceuticals, as well as the treatment of water and sewage. In the sensing of dry materials such as grains and powders, the long-range, dual-level sensors offer an efficient alternative to certain limit switch devices, which can be prone to frequent maintenance problems and unreliable operation.

In applications where high sound absorption conditions may exist in the material being detected, and either the one or two meter range model sensor becomes unreliable because of lost energy, the more powerful 8m range SM902 can provide the solution when used within the sensing ranges of either one or two meters.

Temperature compensation allows these long-range sensors to operate reliably in outdoor applications in temperatures ranging from -20° to 60°C (-4° to 140°F).

Operation

The Model SM902 series sensor, operating on 12 to 24 VDC regulated power, is a self-contained, pulse-echo, dual-level sensing device that monitors and controls most nonhazardous material levels within the specified sensing ranges. With extremely short deadbands, the sensors are capable of detecting levels of liquids, solids, and powders as close as 51 mm (2") from the sensor face.

Before operation, a push-button "teach" function is used to set the sensing window limits. The near and far limits of a desired sensing window can be set anywhere within the sensing range and may be set to encompass the full sensing range or be as small as desired. A double press of the SETUP push-button makes possible the setting of a default window anywhere within the sensing range.

Functionality in the operation of the 30 mm, long-range sensors includes the capability to be configured for various NPN and PNP, normally open, normally closed or complementary output modes for: pump-in latch or pump-out, with and without alarm or setpoint, and dual alarm/dual setpoint operations. A loss-of-echo feature can be selected to hold the output in the event of a loss-of-echo condition.

During setup and operation, a multicolor LED indicates the limits setup and operational modes while an amber LED illuminates when the output is in an active (on) state.

How does it work?

During setup and operation, these SM902 series sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula, D = TVs/2, where D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; V = the velocity of sound, approximately 1100 feet per second.

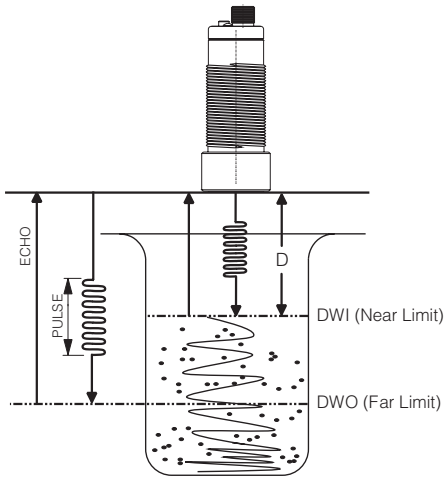
During operation, the calculated distance (D) between the sensor and the object (e.g., level) is compared to the distance between the sensor and the near and far limits. These limits are shown in the illustration above as Dwi and Dwo. When D is equal to one of the two limits, according to the level-control functions, an output change takes place. A red LED illuminates when the output is in an active (on) state.

Level-Control Functions

The level control output in the Model SM902 series can be configured for many different operating functions. Through the Model Reference Guide, the sensor can be selected to perform a pump-in latch function, pump-out latch function, dual-setpoint function, dual alarm, or a combination of these functions.

Pump-in Latch

When the level moves farther than the far limit, the sensor level control output switches state and latches, starting a pump-in process. The sensor level control output does not change state until the level moves back closer than the near limit to stop the pumping process.



Pump-out Latch

When the level moves farther than the far limit, the sensor level control output switches state and latches, stopping pump-out process. The sensor level control output does not change state until the level moves back closer than the near limit to restart the pumping process.

Dual Set-point

Two sensor outputs are used to enable this control function. One output operates independently with the near set-point limit while the other operates independently with the far setpoint limit. The near set-point limit output switches state when the level moves closer than the near set-point limit and does not switch back until the level moves farther than the near set-point limit.

The far set-point limit output switches state when the level moves closer than the far set-point limit and does not switch back until the level moves farther than the far set-point limit.

Dual Alarm

Two sensor outputs are used to enable this control function. One output operates independently with the near alarm limit while the other operates independently with the far alarm limit. The near alarm limit output switches state when the level moves above (closer than) the near alarm limit and changes state when the level moves back below (farther than) the near alarm limit. The far setpoint limit output switches

Model Reference Guide - SM902 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM9 5 2 A - 1 0 0 0 0 0 -**

SUPERPROX® Product Series

Power/Connection Type
0...12 to 24 VDC / cable style
5...12 to 24 VDC / connector style

Sensing Function
2..Dual level

Design Level
A...Applies to all models

Sensing Range
1...51 mm to 1 m (2" to 39")
4...120 mm to 2 m (4.7" to 79")
7…120 mm to 1 m (4.7" to 39") - Required for ST option
8…203 mm to 8 m (8" to 26')

Level-Control Function
0...Pump-out latch
1...Pump-in latch
2...Dual setpoint
3...Dual alarm
4...Pump-in latch, with alarm
5...Pump-out latch, with alarm
6...Pump-in latch, with setpoint
7...Pump-out latch, with setpoint

Output Type
Level-control functions 0 and 1 (Pump in/out units without alarm or setpoint):
0...Normally open (N.O.) - NPN & PNP
1...Normally closed (N.C.) - NPN & PNP
2...Complementary NPN outputs
3...Complementary PNP outputs
Level-control functions 2 and 3 (Dual alarm/dual setpoint units):
4...Normally open (N.O.) - NPN outputs
5...Normally closed (N.C.) - NPN outputs
6...Normally open (N.O.) - PNP outputs
7...Normally closed (N.C.) - PNP outputs
Level-control functions 4 through 7 (Pump units with alarm or setpoint):
4...N.O. control and alarm/set-point - NPN outputs
5...N.C. control and alarm/set-point - NPN outputs
6...N.O. control and alarm/set-point - PNP outputs
7...N.C. control and alarm/set-point - PNP outputs
8...N.O. control, N.C. alarm/set-point - NPN outputs
9...N.C. control, N.O. alarm/set-point - NPN outputs
A...N.O. control, N.C. alarm/set-point - PNP outputs
B...N.C. control, N.O. alarm/set-point - PNP outputs

Response Time
0...Standard: 150 ms (1 m) / 200 ms (2 m) / 1 s (8 m)
1...300 ms (1 m) / 400 ms (2 m)
2...1.000 s (1 m) / 1.500 s (2 m)
4…500 ms (1 m and 2 m)

Functionality
00...Standard default window: ± 6.35 mm (0.25"), 1 m and 2 m; ± 63.5 mm (2.50"), 8 m
02...Default window, ± 6.35 mm (0.25"),1 m and 2 m; ± 63.5 mm (2.50"), 8 m; outputs on on loss-of-echo
04...Default window, ± 9.52 mm (0.375"),1 m and 2 m; outputs off on loss-of-echo

Options
...No designator indicates no options
ST...Stainless transducer (available in stainless steel housing and 120 mm to 1 m models only)
LE...No change in output on loss of echo
FS...Fluorosilicone transducer face (1 m models only)
AD...Limits push-button disabled

Housing Types
...No designator indicates standard ULTEM®* plastic
S...SS303 stainless steel (1 and 2 m models only)

NOTE: Contact the factory for DeviceNet communications capability
* ULTEM® is a registered trademark of The General Electric Company.

state when the level moves below (farther than) the far alarm limit and changes state when the level moves back above (closer than) the far alarm limit. As a fail-safe, the normally open (N.O.) dual alarm outputs are physically active when the level is between the alarm limits and physically inactive when in an alarm condition.

Pump Latch with Alarm/Setpoint

This control function uses a combination of the above level control functions.

Setting the Window Limits

Located on the backside of the sensor, the SETUP push-button is used to set the near and far window limits within which the level sensing is to take place. Before the limits are set, the sensor must be properly aligned with the object to be detected.

To set the window limits, depress the SETUP push-button (the multicolor LED rapidly flashes amber to indicate the push-button is being pressed) until the multicolor LED flashes green in about 3 seconds, and then release the SETUP push-button. The multicolor LED continues flashing green indicating the sensor is waiting for the first window limit. Align a flat object parallel to the sensor face at the desired distance for either the near or far window limit, and press the SETUP push-button once. Upon release of the SETUP push-button, the multicolor LED flashes amber indicating the first window limit is set and the sensor is waiting for the second window limit. Align a flat object parallel to the sensor face at the desired position for the second window limit and press the SETUP push-button once. Upon release of the SETUP push-button, the multicolor LED turns to the color that indicates where the object is located. The sensor has no time-out for setting limits.

For sensor models with a control output and either an alarm or setpoint output, the alarm or setpoint limit is set after the window limits are set. With these models, after the SETUP push-button is pressed for the second window limit and released, the multicolor LED flashes amber/green indicating the second window limit is set and the sensor is waiting for either the alarm or setpoint limit. Align a flat object parallel to the sensor face at the desired position for either the alarm or setpoint limit and press the SETUP pushbutton once. Upon release of the SETUP push-button, the multicolor LED turns to the color that indicates where the object is located.

While the SETUP push-button is depressed, the multicolor LED turns amber to indicate the sensor detects the object. If the sensor does not detect the object, the multicolor LED is red while the SETUP push-button is depressed, and flashes 2 seconds when the SETUP push-button is released. After flashing red 2 seconds, the sensor requests that window limit again by flashing green for the first window limit or flashing amber for the second window limit.

A special feature of these sensors allows the user to set an automatic default window of fixed size anywhere within the sensing range. For the 1 and 2 meter range models, the standard default window is 12.7 mm (0.50"). It is 127 mm (5.0") for the 8 meter range models. Other default window sizes are available for all the models upon request. To easily set the default window, while the multicolor LED is flashing green, align a flat object parallel to the sensor face at the center of the desired window and press the SETUP push-button twice in succession without moving the object. An automatic default window limit will be set at a distance equal to half the default window in front of and behind the flat-object surface nearest the sensor. If, for example, the functionality of the 1 or 2 meter range sensor calls for the standard default window, the sensing window is set with limits 6.35 mm (0.25") in front of and behind the object's front surface.

For long distances or tall-tank applications, when use of the sensor's push-button is not practical an optional Model AC441A handheld configurator can be used to set or change the near and far window limits and display the object distance when the sensor is located up to 200 feet from the user. The Model AC441A cannot, however, be used to set the default window.

Once set, the window limits are saved in nonvolatile memory and thus are retained when power is removed from the sensor.

Loss of Echo Operation

Output Off, On Loss of Echo

Loss of echo occurs when the sensor does not receive echoes from an object or surface level within its sensing range for more than one second. When this occurs, the sensor's output automatically switches off. When the sensor again receives echoes, the output assumes the state relative to the dual-level control or dual-setpoint limits.

Output Holds, On Loss of Echo ("LE" Option)

The LE suffix in the Model Reference Guide indicates an available option for users who do not prefer the standard response to loss of echo. With the LE option, when loss of echo occurs, there is no change in the output state of the sensor. When the sensor again receives echoes, the output assumes the state relative to the dual-level control or dual-setpoint limits.

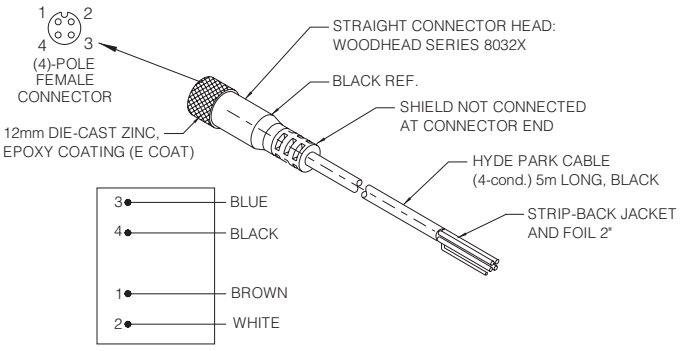
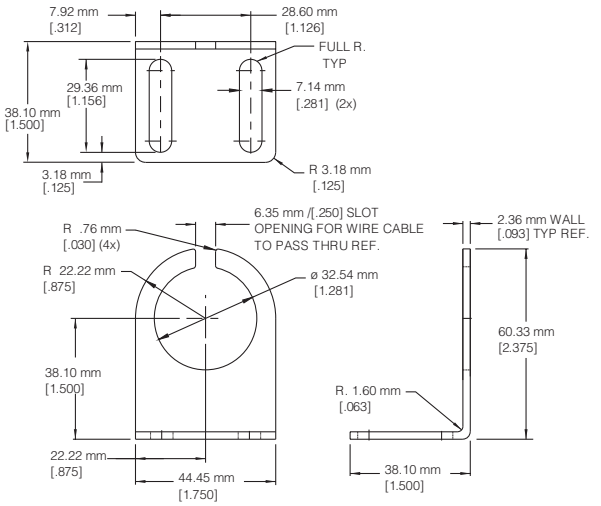
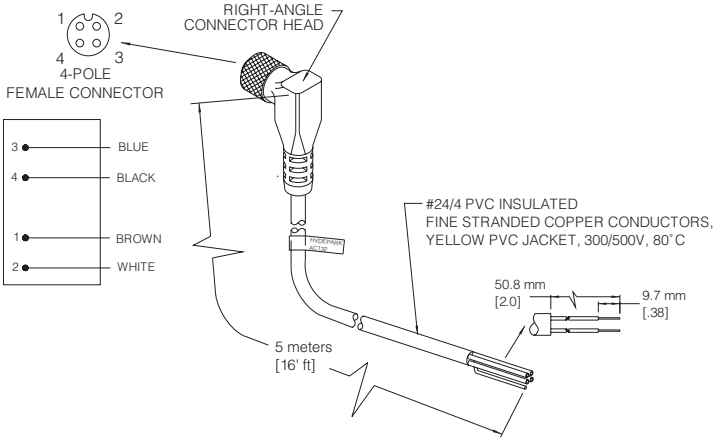
Accessories

AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for 30 mm, barrel-style sensors





AC132 Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for 30 mm, barrel-style sensors



AC233 Small, right-angle, stainless, mounting bracket for 30 mm, barrel-style sensors.

General Specifications

Sensing [TA = 20° C (68° F)]

1 and 2 meter ranges

Model Sensing Ranges:
51 mm to 1 m (2.0" to 39")
120 mm to 1 m (4.7" to 39")**
120 mm to 2 m (4.7" to 79")
Sonic Frequency: 200 kHz
Minimum-size Detection
(Model SM902A-1):1.59 mm (0.0625")
diameter rod up to 635 mm (25") distance from sensor
Maximum Angular Deviation:
± 10° on 305 mm x 305 mm (12" x 12") flat target at a distance of 305 mm (12")
Sonic Cone Profile: See Beam Plots, Page 4-109
Limit Adjustment Resolution: 0.08 mm (0.003")
Repeatability: ± 0.8716 mm (0.03431") max.
Temperature Compensated

Power Requirements

Supply Voltage:
12 to 24 VDC ± 10% excluding output load (regulated supply)
Current Consumption: 100 mA max., excluding load
Peak Inrush Current: 0.50 Amp.
Power Consumption: 1.2 W max., excluding load

Outputs

Sinking Output (NPN):
Maximum on-state voltage @ 100 mA: 0.37 volt
Maximum load current: 100 mA
Maximum applied voltage: 35 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop @100 mA: 0.50 volt
Maximum load current: 100 mA

Response Time - Standard

150 ms on/off (1 m range models)
200 ms on/off (2 m range models)
Other response times are available.

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates limits setup and operational modes.
Amber LED: Visual indicator for sensor output: illuminated when output is in an active (on) state.

Connection Options

Cable Style:
24 AWG, foil shield, lead-free PVC jacketed, 4-conductor, 3 meters (10') long, standard
Connector Style:
12 mm, 4 pole, male

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current
NOTE: This sensor is NOT RATED EXPLOSION PROOF.

Environmental

Operating Temperature Range:
0° to 50°C (32° to 122°F) for silicone-faced models
- 20° to 50°C (-4° to 122°F) for stainless steel-faced models
Storage Temperature Range:
-20° to 80°C (14° to 176°F) for silicone-faced models
-50° to 80°C (-58° to 176°F) for stainless steel-faced models
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Unaffected by most acids, bases, and oils. Fluorosilicone and stainless steel-faced transducers available for severe, corrosive-type environments.

Construction

Dimensions:
Cable Model: 30 mm (1.181") dia. x 1.5 mm-6g threaded housing x 94.95 mm (3.738") long, including 34.70 mm (1.365") dia. x 20.10 mm (0.790") long sensing head
Connector Model: 30 mm (1.181") dia x 1.5 mm-6g threaded housing x 95.99 mm (3.779") long; 117.15 mm (4.612") long, including AC132 right-angle, M12 micro, connector/cable assembly; 125 mm (4.921") long, including AC130 straight, M12 micro, connector/cable assembly; sensing head dimension same as cable model.
Housing: Epoxy encapsulated to resist shock and vibration
Case: ULTEM®* plastic (FDA Approved) or SS303 stainless steel
Transducer Face: Silicone rubber - gray SS304 stainless steel, 0.051 mm (0.002") thick**
Sensor Cables: Lead-free, black PVC jacketed

8 meter, long range

Model Sensing Range:
203 mm to 8 m (8.0" to 26')
Sonic Frequency: 75 KHz
Minimum-size Detection (Model SM902A-8):
50.8 mm (2.0") diameter rod up to 4572 mm (15') distance from the sensor
Maximum Angular Deviation:
± 10° on a large flat surface at a distance of 6.096 m (20')
± 5° on a large flat surface at a distance of 8 m (26')
Sonic Cone Profile: See Beam Plots, Page 4-109
Limit Adjustment Resolution:
0.254 mm (0.01")
Repeatability: ± 2.54 mm (0.10") max.
Temperature Compensated

Power Requirements

Supply Voltage:
12 to 24 VDC ± 10% excluding output load (regulated supply)
Current Consumption: 100 mA max., excluding load
Peak Inrush Current: 0.50 Amp.
Power Consumption: 1.2 W max., excluding load

Outputs

Sinking Output (NPN):
Maximum on-state voltage @ 100 mA: 0.37 volt
Maximum load current: 100 mA
Maximum applied voltage: 35 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop @ 100 mA: 0.50 volt
Maximum load current: 100 mA

Response Time - Standard

1 s on/off
Other response times are available.

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates limits setup and operational modes.
Amber LED:
Visual indicator for sensor output; illuminated when output is in an active (on) state.

Connection Options

Cable Style:24 AWG, foil shield, lead-free PVC jacketed, 4-conductor, 3 meters (10') long, standard Connector Style: 12 mm, 4 pole, male

Protection

Power Supply: current-limited over- voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current
NOTE: This sensor is NOT RATED EXPLOSION PROOF.

Environmental

Operating Temperature Range: - 20° to 60°C (-4° to 140°F)
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67 Chemical Resistance: Unaffected by most acids, bases, and oils.

Construction

Dimensions:
Cable Model: 30 mm (1.181") dia. x 1.5 mm-6g threaded housing x 116.31 mm (4.579") mm long, including 43.18 mm (1.70") dia. x 42.09 mm (1.657") long sensing head
Connector Model: 30 mm (1.181") dia x 1.5 mm-6g threaded housing x 117.35 mm (4.62") long; 139.19 mm (5.48") long, including AC132 right-angle, connector/cable assembly; 147.04 mm (5.789") long, including AC130 straight, connector/cable assembly; sensing head dimension same as cable model.
Housing: Epoxy encapsulated to resist shock and vibration
Case: ULTEM®* plastic (FDA Approved)
Transducer Face: Epoxy - white
Sensor Cables: Lead-free, black PVC jacketed

Agency Approvals

CE Mark: CE conformity is declared to:
EN63126: 1997 (annex A, industrial) including amendment A1:1998. EN55011 group 1 Class A.
Declaration of Conformity available upon request.

SUPERPROX® Ultrasonic Analog Output Sensors

Up to 8 Meter Span Measurement &Level Control

- *Sensing spans of 1 m (39"), 2 m (79"), and 8 m (26')*
- *Easy push-button setup or optional hand-held, setup/ display accessory available for all*
- *Either 4 to 20 mA or 0 to 10VDC analog output; either direct or inverse proportional outputs*
- *Epoxy sealed in tough ULTEM® plastic or stainless steel housing*
- *Resistant to caustic materials and harsh environments*
- *Field programmable capability*
- *DeviceNet capability*
- *CE certified*

Control levels and measure distances over spans of up to 8 meters (26 feet) with broad functionality and 30 mm mounting convenience

In vast contrast to other self-contained analog sensors, this new and smaller 30 mm, SUPERPROX® Model SM906 sensor series offers mounting convenience, broad functionality, and a selection of three analog sensing spans encompassing a few inches from the sensor to as far away as 26 feet. Depending on the model selected and the distance or level of the material being measured or controlled, the sensors offer analog spans of 1 m (39"), 2 m (79"), and a long span of 8 m (26'). The capability is enhanced further with the shortest deadbands in the sensing industry of 51 mm (2"), 120 mm (4.7"), and 203 mm (8"), respectively.

As shown in the Model Reference Guide, the SM906 series of ultrasonic analog sensors gives the user a wide selection of factory-configurable functionality to maximize the sensor's efficiency in specific analog sensing applications. In addition to the analog sensing span, the user may select a 0 to 10 VDC or 4 to 20 mA output that is either directly or inversely proportional, output state for loss of echo and power up, and response time. Also, a broad selection of sensing functionality configurations, with foreground and/or background suppression, makes possible optimum sensing discrimination. This includes, for example, the capability of monitoring levels in a tank while ignoring the paddles on the tank agitator.

The 30 mm housing, up to 60% smaller than other analog sensors with equal functionality, provides a package for the SM906 that is easily installed, without positioning limitations, in covers and other hard-to-mount areas. The models in this series are equipped with a push-button to set the sensors' near and far span limits. When it is impractical to use the push-button for setting the long-range limits, an optional AC441A, hand-held, setup/display accessory is available. The two limits can be set for a span to either encompass the full range of the sensor or create a span as small as desired for precise level or distance control. A typical example of precise level control is when the application calls for maintaining a constant fill level in a filler machine. In this example, the analog output provides a means of controlling the product flow into the filler as the filler speed changes. The analog output may provide a means for controlling the speed of other machinery as well as regulating the movement of control valve

actuators. The analog output may also connect directly to programmable controller analog input modules for performing complex loop control or simple status (e.g., distance measuring) monitoring functions. All control limits are stored in nonvolatile memory and thus are retained if power is removed from the sensor.

Unlike other sensing technologies, these sensors are capable of detecting all materials whether, liquid, granular, and solid, and regardless of color, shape, and composition, transparent or opaque, including powder, food products, grains, chemicals, pharmaceuticals, oils, plastics, and objects that change colors. The threaded housings are available in ether ULTEM® plastic or SS303 stainless steel which are epoxy encapsulated to withstand shock and vibration. Both housings are sealed to withstand dusty, dirty, clean-in-place, noncondensing humidity, high-pressure washdown environments, and they are virtually unaffected by changing light conditions, colors, and noise. In meeting NEMA 4X (indoor use only) and IP67 industry standards, the sensors resist most acids, bases, and oils, including most food products. All the sensors in this model series are CE certified.

1 meter and 2 meter span models

For purpose of definition, the standard 1 meter span models are identified in the Model Reference Guide as the Model SM906A-1 and SM956A-1 series sensors and the 2 meter-span models are identified as the Model SM906A-4 and SM956A-4 series sensors. Respectively, these models provide for analog output sensing from 50.8 mm to 1 m (2" to 39") and 120 mm to 2 m (4.7" to 79"). The 96 mm (3.78") length of the connector model, excluding the connector/cable assembly, adds to the sensor's installation convenience. Operating on a sonic frequency of 200 kHz, these sensors have a standard response time of 25 ms and 35 ms for the 1 and 2 meter span models, respectively, with others available as shown in the Model Reference Guide. The FDA approved silicone rubber transducer, while used to couple the ultrasonic energy to the air, is also resistant to most acids, bases, oils, and food products.

Various functional choices plus the mounting convenience of a 30 mm housing combine to achieve reliability and cost effectiveness for these models in the detection of moving object positions in specific sensing applications. These include: monitoring and controlling levels of liquids and solid materials in bins and filler bowls, controlling container flow on mass conveyors, monitoring and controlling roll diameters and speeds, webs of paper and fabrics, extrusion widths, tension, dancer loops and valve positions, as well as the modulation of variable-speed motors, pumps and winding/unwinding equipment.

For 1 meter span analog output sensing applications that require measurement and control capability in severe, corrosive-type environments, the Model SM906A-7STS and Model SM956A-7STS series models have an SS303 stainless steel housing and an SS304 stainless steel-faced transducer. With an analog sensing span of 120 mm to 1 m (4.7" to 39"), these sensors provide reliable operation in the detection of certain chemicals and corrosive materials or where caustic cleaning solutions are used in washdowns of machinery and equipment in close proximity to the sensor. For out-of-doors analog sensing applications, where cold weather is a factor, this corrosion-resistant model series provides reliable operation in temperatures as low as -20°C (-4°F).

8 meter, long-span models

The Model SM906A-8 and Model SM956A-8 series represents the only analog sensors on the market that offer the combination of shortest deadband, longest span, and smallest package. As indicated in the Model Reference Guide, these sensors measure and monitor the position and level of objects over a sensing span of just 203 mm (8") to 8 m (26'). With this shortest deadband, the need to position the sensor at great distances from the object as with most long-span sensors, is eliminated. Only 116.31 mm (4.579") in length for the cable-style model, a fraction of the size of other long-span sensors, these 30 mm diameter sensors are easily mounted in covers and other tight spaces in the plant. They operate on a sonic frequency of 75 kHz with a standard response time of 250 ms and a minimum response time of 150 ms. Other response times are available. An epoxy transducer face, in addition to coupling the ultrasonic energy to the air, allows the sensor to perform in a wide range of harsh environments including those involving most acids, bases, and oils.

By virtue of the 75 kHz frequency, the sensor's wide, 20-degree beam is especially effective in sensing the tank or bin levels of various types of liquids, solids, and granules. This includes applications involving the blending of ingredients and the processing of food products and pharmaceuticals, as well as the treatment of water and sewage. For outdoor analog output applications, the sensors have temperature compensation for operation in temperatures ranging from -20° to 60°C (-4° to 140°F). In applications where high sound absorption conditions exist in the material being detected, (e.g., tiny plastic pellets) and either the 1 or 2 meter span model sensor becomes unreliable because of lost energy, the more powerful 8m span SM906 can provide the solution when used in the shorter-span distances.

Operation

The Model SM906 series is a self-contained, pulse-echo device that both transmits and receives sonic energy within the specified analog span. Operating on 15 to 24 VDC, these sensors use the latest ultrasonic sensing and microprocessor technology that allows the sensor to ignore all surrounding sonic interference and detect only the designated object.

During operation, the sensor monitors the distance to an object or level while generating a proportional analog output relative to the two analog span limits. When an object is within the analog span, the analog output value changes proportionally in relation to the analog span limits. For example, if the object is halfway between the analog span limits, the output is either 5 volts or 12 mA, depending on the output model selected. The output range adjusts to the size of the analog span and remains proportional regardless of where the limits are set for the analog span.

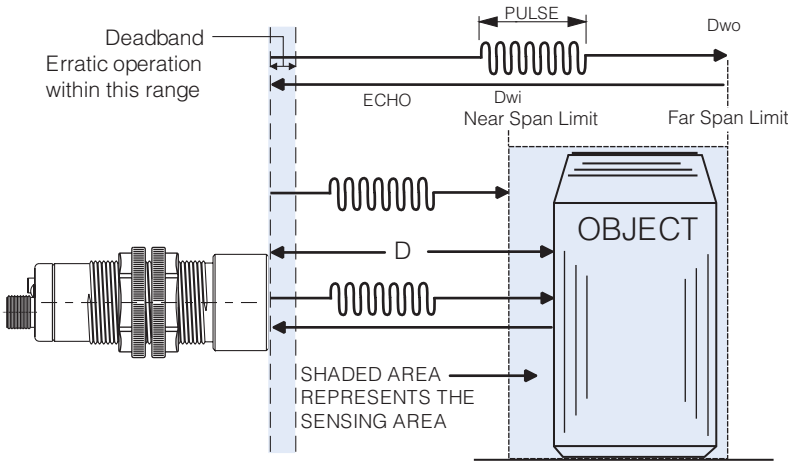
The sensors are equipped with a multicolor sensing status LED and a amber output LED. The multicolor LED indicates where the level or target position is relative to the span limits. It is green when the object is between the analog span limits, red if closer than the near span limit, and amber if farther than the far span limit. The amber LED indicates the relative value of the analog output and varies in intensity according to the output. The higher the current or voltage output, the brighter the amber LED.

As shown on this page, Hyde Park offers both direct and inverse proportional analog output models for continuous sensing applications.

How does it work?

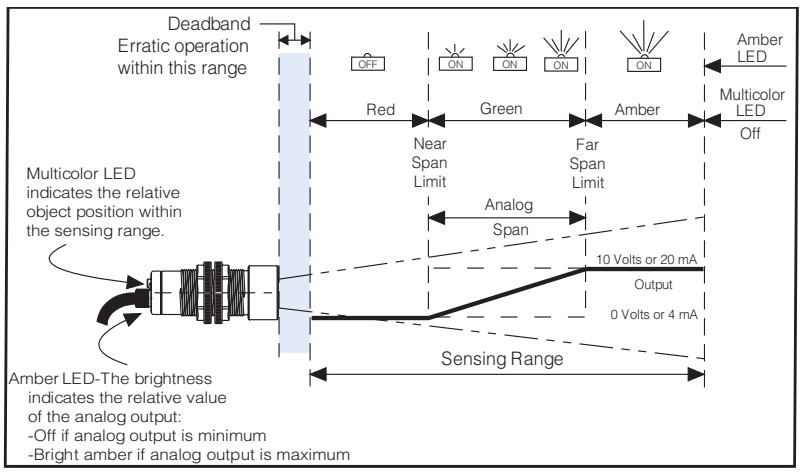
During setup and operation, these SM906 series ultrasonic sensors continually and accurately measure the elapsed time of every pulse echo reception between each pulse transmission. The transmitted pulse begins a time clock to register the elapsed times for the received pulse echoes. Given the elapsed time, the sensor software calculates the distance traveled out to the object or surface and back to the sensor, using the formula, D =Tvs/2, where: D = distance from the sensor to the object; T = elapsed time between the pulse transmission and its echo receptions; and Vs = the velocity of sound, approximately 1100 feet per second.

During operation, the calculated distance (D) between the sensor and the object is compared to the distances between the sensor and the analog span limits. These limits are shown in the illustration below as Dwi and Dwo. If D is within the analog span limits, according to the selected sensing functionality configuration, a proportional output value for D, relative to the analog span limits, is generated.



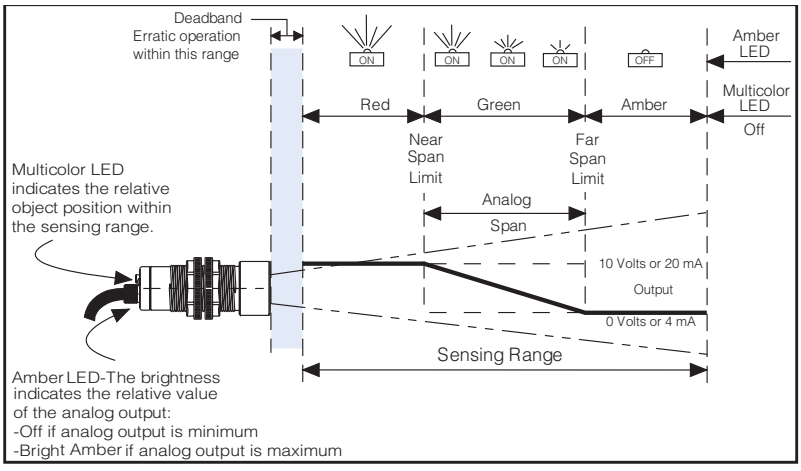
Inverse Proportional Output

The analog 0 to 10 Volt or 4 to 20 mA signal value decreases as the object moves closer to the near span limit.



Direct Proportional Output

The analog 10 to 0 Volt or 20 to 4 mA signal value increases as the object moves closer to the near span limit.



Model Reference Guide - SM906 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM9 5 6 A - 1 0 0 0 00 -**

SUPERPROX® Product Series

Power/Connection Type

0...15 to 24 VDC / cable style
5...15 to 24 VDC / connector style

Sensing Function

6...Analog

Design Level

A...Applies to all models

Analog Span

1...51 mm to 1 m (2 to 39")
4...120 mm to 2 m (4.7 to 79")
7...120 mm to 1 m (4.7 to 39") - Required for ST option
8…203 mm to 8 m (8" to 26')

Output Signal

0...Inverse 0 to 10 V
1...Direct 0 to 10 V
2...Inverse 4 to 20 mA
3...Direct 4 to 20 mA
4...Inverse 0 to 5 V
5...Direct 0-5 V
6...Inverse 0 to 20 mA
7...Direct 0 to 20 mA
8... Autoslope 0 to 10 V
9... Autoslope 4 to 20 mA

Output State for Loss of Echo and Power Up

0...Minimum
1...Maximum
2...Hold on loss of echo and minimum on power up
3...Hold on loss of echo and maximum on power up

Response Time

0...Standard: 25 ms (1 m) / 35 ms (2 m) / 250 ms (8 m)
1...Fast: 15 ms (1 m) / 20 ms (2 m) / 150 ms (8 m)
2...100 ms (1 m /2 m)
3...250 ms (1 m/2 m)
4...500 ms (1 m/2 m/8 m)
5...1.00 s (1 m/2 m/8 m)
6...2.50 s (1 m/2 m/8 m)

Functionality

00...Standard: No foreground or background suppression (background mode)
01...Foreground suppression only (object mode) ignore echoes before near limit
02...Foreground suppression only (background mode), process first echo, ignore if before near limit
03...Foreground and background suppression (background mode), process first echo, ignore if not within limits

Options

...No designator indicates no options
ST...Stainless transducer (available in stainless steel housing for 120 mm to 1 m models only)
FS...Fluorosilicone transducer face (1 m models only)
AD...Limits push-button disabled

Housing Types

...No designator indicates standard ULTEM®* plastic housing
S...SS303 stainless steel (1 and 2 m models only)

* ULTEM® is a registered trademark of The General Electric Company.

Field configurable and DeviceNet Model Reference Guides start on page 4-145.

Sensing Functionality Configuration

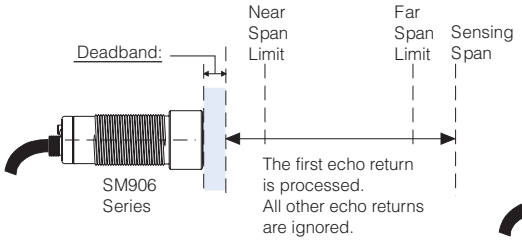
There are four sensing functionality configurations available, through model selection, to provide a Model SM906 series sensor with optimum sensing discrimination. This means the sensor is capable of detecting objects at certain distances and ignoring objects at other distances. An example would be in the monitoring of a level in a tank while ignoring the paddles on the tank agitator which would be closer than the near span limit.

Each configuration employs a different algorithm to determine which echo returns are either accepted or ignored over the specified sensing range. Thus, these four configurations enable the sensor series to address a multitude of continuous-sensing, process-control applications.

Use the following four illustrations as a guide in selecting the functionality best suited for the sensing application.

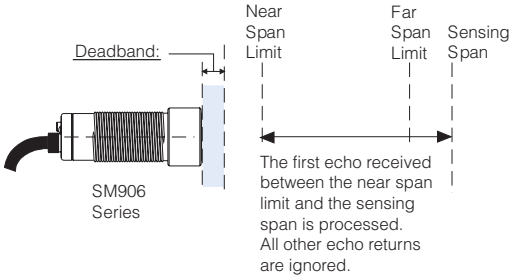
Configuration: "00" - Standard: No foreground or background suppression

With this configuration, the sensor processes only the first echo received from anywhere within the sensing span.



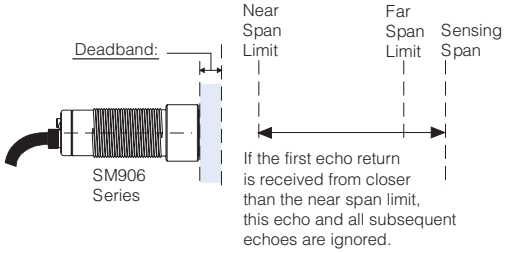
Configuration: "01" - Foreground suppression only (object mode)

With this configuration, the sensor ignores echoes received from objects closer than the near span limit and processes only the first echo received from between the near span limit and the sensing range.



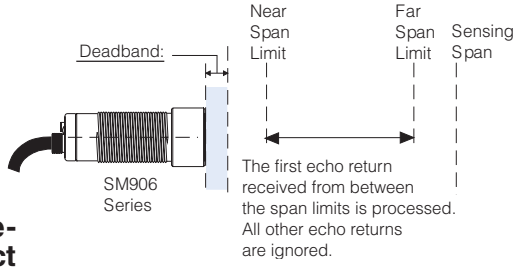
Configuration: "02" - Foreground suppression only (background mode)

With this configuration, the sensor processes only the first echo received from an object. If the first processed echo from the object is closer than the near span limit, the echo is ignored and not processed. If the first processed echo from the object is between the near span limit and the sensing range, the echo is processed and the analog output value is updated.



Configuration: "03" - Foreground and background suppression (background mode)

With this configuration, the sensor processes only the first echo received from an object. If the echo is received from between the near and far span limits, the echo is accepted and the analog output value is updated. If the echo is received from closer than the near span limit or farther than the far span limit, the echo is ignored and the analog output value is not updated.



Analog Output Response Function

The analog output value is derived from the sensor response time and the object distance from the sensor. The "standard" response for the one meter range sensing model is 25 ms and its analog output value is derived from the average of the last two echo returns. The "fast" response time for a one meter range sensing model is 15 ms and its analog output value is derived from the last echo return. For sensors with other response times, the analog output value reaches 95% of the final output value in the stated response time using an exponential averaging function.

Setting the Analog Span Limits

Located on the backside of the sensor, the SETUP push-button is used to set both the near and far span limits. Depress the SETUP push-button (the multicolor LED rapidly flashes amber to indicate the push-button is being pressed) until the multicolor LED flashes green in about 3 seconds, and then release the SETUP push-button, The multicolor LED continues flashing green indicating the sensor is waiting for the first span limit. Align a flat object parallel to the sensor face at the desired distance position for either (near or far) span limit, and press the SETUP push-button once. Upon release of the SETUP push-button, the multicolor LED flashes amber indicating the first span limit is set and the sensor is waiting for the second span limit. Align a flat object parallel to the sensor face at the desired position for the second span limit and press the SETUP push-button once. Upon release of the SETUP push-button, the multicolor LED turns to the color that indicates where the object is located. The sensor has no time-out for setting limits.

While the SETUP push-button is depressed, the multicolor LED turns amber to indicate the sensor detects the object. If the sensor does not detect the object, the multicolor LED is red while the SETUP push-button is depressed, and when the SETUP push-button is released, the multicolor LED flashes red 2 seconds. After flashing red for 2 seconds, the sensor requests that span limit again by flashing green for the first span limit or flashing amber for the second span limit.

Once set, span limits are saved in nonvolatile memory and thus are retained when power is removed from the sensor.

Output State for Loss of Echo Selections

As shown in the Model Reference Guide, four selections are available to address loss of echo conditions for specific applications.

Selection "0" or "1" - Without Signal Hold on Loss of Echo

On power-up or when no echoes are detected for one second, for the 1 and 2 meter sensing span and 4 seconds for the 8 meter sensing span, the analog output will go to a minimum value for selection 0 or a maximum value for selection 1.

Selection “2” or “3” - With Signal Hold on Loss of Echo

If no echoes are received after power-up, the analog output value is a minimum when using selection 2 or a maximum when using selection 3. In addition, if echoes are not detected, the analog output value holds until echoes are once again received within the sensor’s range.

Multicolor LED Operation

Red - object sensed closer than the near span limit.

Green - object sensed at or between the near and far span limits.

Amber - object sensed beyond the far span limit.

Off - no object sensed within the full sensing range.

Amber LED Operation

The amber LED intensity varies directly with the magnitude or the analog output. The amber LED is off when the output is at a minimum and full brightness when the output is at a maximum.

Electrical Wiring

The sensor wires must be run in conduit free of any AC power of control wires.

General Specifications

Sensing [TA = 20° C (68° F)]

1 and 2 meter ranges

Model Sensing Ranges:
51 mm to 1 m (2.0" to 39")
120 mm to 1 m (4.7 to 39")**
120 mm to 2 m (4.7 to 79")
Sonic Frequency: 200 kHz
Minimum Object-size Detection:
1.59 mm (0.0625") diameter rod up to 635 mm (26") distance from sensor
Maximum Angular Deviation:
± 10° on 305 mm x 305 mm (12" x 12") flat target at a distance of 305 mm (12")
Sonic Cone Profile: See Beam Plots, Page 4-109
Limit Adjustment Resolution: 0.08 mm (0.003")
Repeatability: ± 0.8716 mm (0.03431") max.
Temperature Compensated

Power Requirements

Supply Voltage
15 to 24 VDC @ 80 mA, excluding output load
Current Consumption: 80 mA max., excluding load
Peak Inrush Current: 0.75 Amp.
Power Consumption: 1.2 W max., excluding load

Outputs

Output Range: 0 to 10 VDC or 4 to 20 mA, depending on model selected
Output Configuration:
Inverse (0 to 10 VDC or 4 to 20 mA)
Direct (10 to 0 VDC or 20 to 4 mA)
Voltage Output Slope: 33 mV/mm(0.833 V/inch) using a 305 mm (12") span
Minimum Load Resistance: 1 K Ohms
(5 K Ohms recommended for best accuracy)
Current Output Slope: 52 µA/mm (1.33 mA/inch) using a 305 mm (12") span
Maximum Load Resistance: 500 Ohms
(250 Ohms recommended for best accuracy)

Analog Output Electrical Specifications

(Test conditions: 24 VDC, TA = 20° C, large flat target, still air, @ minimum span size of 304.8 mm or 12")

	current output[1]	voltage output[2]
Output Range	4-20 mA	0-10 V
Load Resistance (Ohms)	10 to 500	1 K to 00
Resolution[3]	4.88 µA	2.44 mVDC
Accuracy (% of span)[4]	± 0.50	± 0.40
Linearity (% of span)	± 0.10	± 0.10
Temperature Dependence (% of span/°C)	± 0.006	± 0.004

[1]tested with 250 Ohm load
[2]tested with 1000 Ohm load; a low value is recommended to minimize noise pickup
[3]resolution = span/4096; Maximum: 0.23 mm (0.009") for 1 meter model, max. span 0.459 mm (0.018") for 2 meter model, max. span
[4]best accuracy may be limited to 0.794 mm (0.03125") due to wave-skip phenomena

Response Times - Minimum, standard
15 ms on/off, 25 ms on/off (1 m range models)
20 ms on/off, 35 ms on/off (2 m range models)
Other response times are available.

Indicators

Multicolored (Amber, Red, Green) LED:
Indicates object position relative to the span limits
Red LED: Intensity increases as output signal increases.

Connection Options

Cable Style: 24 AWG, foil shield, lead-free PVC jacketed, 4-conductor, 3 meters (10') long, standard
Connector Style: 12 mm, 4-pole, male

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current
NOTE: This sensor is NOT RATED EXPLOSION PROOF.

Environmental

Operating Temperature Range:
0° to 50°C (32° to 122°F) for silicone-faced models
-20° to 50°C (-4° to 122°F) for stainless steel-faced models
Storage Temperature Range:
-40° to 100°C (-40° to 212°F) for silicone-faced models
-50° to 80°C (-58° to 176°F) for stainless steel-faced models
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Unaffected by most acids, bases, and oils. Fluorosilicone and stainless steel-faced transducers available for severe, corrosive-type environments.

Construction

Dimensions:
Cable Model: 30 mm (1.181") dia. x 1.5 mm-6g threaded housing x 94.95 mm (3.738") mm long, including 34.70 mm (1.365") dia. x 20.10 mm (0.790") long sensing head
Connector Model: 30 mm (1.181") dia x 1.5mm-6g threaded housing x 95.99 mm (3.779") long; 117.15 mm (4.612") long, including AC 132 right-angle, M12 micro, connector/cable assembly; 125 mm (4.921") long,including AC130 straight, M12 micro, connector/cable assembly; sensing head dimension same as cable model.
Housing: Epoxy encapsulated to resist shock and vibration
Case: ULTEM®* plastic or SS303 stainless steel
Transducer Face: Silicone rubber - gray
SS304 stainless steel, 0.051 mm (0.002") thick**
Sensor Cables: Lead-free, black PVC jacketed

8 meter, long range

Model Sensing Range:
203 mm to 8 m (8.0" to 26')
Sonic Frequency: 75 kHz
Minimum Object-size Detection:
50.8 mm (2.0") diameter rod up to 4572 mm (15') distance from the sensor
Maximum Angular Deviation:
± 10° on a large flat surface at a distance of 6.096 m (20')
± 5 on a large flat surface at a distance of 8 m (26') sonic cone profile: see beam plots, Page 4-109
Limit Adjustment Resolution: 0.254 mm (0.01")
Repeatability: ± 2.54 mm (0.10") max.
Temperature Compensated

Power Requirements

Supply Voltage
15 to 24 VDC ± 10%, excluding output load, regulated supply
Current Consumption: 80 mA max., excluding load
Peak Inrush Current: 0.75 Amp.
Power Consumption: 1.2 W max., excluding load

Outputs

Output Range: 0 to 10 VDC or 4 to 20 mA, depending on model selected
Output Configuration: Inverse (0 to 10 VDC or 4 to 20 mA) Direct (10 to 0 VDC or 20 to 4 mA)
Voltage Output Slope: 3.28 mV/mm (83.3 mV/inch) using a 3.048 mm (10') span
1.64 mV/mm (41.7 mV/inch) using a 6.096 mm (20') span
Minimum Load Resistance: 1 K Ohms
(5 K Ohms recommended for best accuracy)
Current Output Slope: 5.2 µA/mm (0.133 mA/inch) using a 3.48 mm (10') span
2.6 µA/mm (0.066 mA/inch) using a 6.096 mm (20') span
Maximum Load Resistance: 500 Ohms

Protection

Power Supply: current-limited over-voltage, ESD, reverse polarity
Outputs: current-limited over-voltage, ESD, over-current
NOTE: This sensor is NOT RATED EXPLOSION PROOF.

Environmental

Operating Temperature Range:
-20° to 60° C (-4° to 140° F)
Storage Temperature Range:
-40° to 100° C (-40° to 212° F)
Operating Humidity: 100%
Protection Ratings: NEMA 4X (indoor use only), IP67
Chemical Resistance: Unaffected by most acids, bases, and oils.

Construction

Dimensions:
Cable Model: 30 mm (1.181") dia. x 1.5 mm-6g threaded housing x 94.95 mm (3.738") mm long, including 34.70 mm (1.365") dia. x 20.10 mm (0.790") long sensing head
Connector Model: 30 mm (1.181") dia x 1.5 mm-6g threaded housing x 95.99 mm (3.779") long; 117.15 mm (4.612") long, including AC132 right-angle, connector/ cable assembly; 125.00 mm (4.921") long, including AC130 straight, connector/cable assembly; sensing head dimension same as cable model.
Housing: Epoxy encapsulated to resist shock and vibration
Case: ULTEM®* plastic (FDA Approved)
Transducer Face: Epoxy - white
Sensor Cables: Lead-free, black PVC jacketed

Agency Approvals

CE Mark: CE conformity is declared to:
EN63126: 1997 (annex A, industrial) including amendment A1:1998. EN55011 group 1 Class A.
Declaration of Conformity available upon request.

*ULTEM® is a registered trademark of The General Electric Co.

**Available only in the stainless steel-faced, 1 m-span models

Accessories

Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16')
Model AC132, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16')
Model AC233, Small, right-angle, stainless,mounting bracket
Model AC250-n, Tank sensor mounting reducer, available with four different outside diameters; used with all SUPERPROX® SM900 family sensors. n = 1 (1 1/4" NPT); 2 (2" NPT); 3 (3" NPT); 4 (4" NPT)
Model AC251-n, Tank sensor mounting flange, available with three different pipe thread diameters, furnished with matching AC250 Tank sensor mounting reducer; used with all SUPERPROX® SM900 family sensors. n = 2 (2" NPT); 3 (3" NPT); 4 (4" NPT)
Model AC441A, Handheld configurator

See Page 7-1 for accessory photos.

Configuration Package for Field Programming SUPERPROX® Sensors

- *Model AC441A configurator serially downloads and uploads all sensor program configurations*
- *Windows-based configuration program with functionality graphics*
- *Allows user to configure SUPERPROX sensors in the field*
- *Field programmable models SC300/600/606/900/906 series*
- *Increase sensing capability & flexibility over SM series equivalent*
- *Remote limit setup in SC & SM900/906 series sensors*
- *Limits push-button lockout option in SC900/906 series sensors*
- *CE certified*

SUPERPROX+™ allows in-the-field programming of SUPERPROX sensors by the user

SUPERPROX+ software combined with the Model AC441A configurator interface module allows the user to now load either standard or custom sensing configurations into the SUPERPROX® 300, 600, 606, 900, and 906 series sensors designated with an 'SC' prefix model number.

The 'SC' prefix designator has been assigned in order to differentiate these field programmable sensors from the factory configured sensors designated with an 'SM' prefix model number. The SUPERPROX+ software will not operate with 'SM' series sensors to prevent possible alteration of the factory loaded configuration defined by the specific sensor model number.

All the unique sensing capabilities and functions available in "SM" sensor models of the SUPERPROX® 300, 600, 606, 900, and 906 series are also available, plus additional capability and functionality in the equivalent field programmable "SC" sensor models. The onboard processor used in the "SC" sensor models has an EEPROM. This gives the user the option to write over an existing sensor program configuration as many times as necessary until it is exactly correct for the intended application.

SC sensor models offer the option to lockout the limits setup push-button. Through the SUPERPROX+ software, the limits setup push-button in the SC900 and SC906 series sensors can be inhibited for protecting the limits from being changed.

More than just a program configurator

The Model AC441A configurator interface module serves as both a program downloading interface as well as an uploading interface for all 'SC' sensor models. In addition, the Model AC441A can be used as a stand-alone limits setup calibrator for setting the sensing or span limits at specific distances from the sensor in SC900/ 906 and SM900/902/906 series sensors through the aid of its four digit LED display. With either model SC900/ 906 and SM900/ 902/906 series sensor connected to the Model AC441A and powered, whatever settings have been set through the limits push-button can be read from the Model AC441A display. The actual sensing distance between a sensor and the object being sensed can also be read in real time from the Model AC441A display to verify sensor operation.

Operation

The SUPERPROX+ software with the Model AC441A con-figurator interface module enables the SC300, 600, 606, 900, and 906 series sensors to be configured in the field with a wide range of unique sensing capability. Besides this feature, the SUPERPROX+ software visually simulates on the computer screen the LED sensing status and output functionality with a simulated target. With this visual graphic aid, the various sensing and operating parameters representing a configuration can be checked prior to loading into the sensor for verifying the functionality is correct for the application.

Another feature of the SUPERPROX+ software allows the SC300, 600, 606, 900, and 906 series sensors to be configured with either an equivalent standard series 'SM' model or a user custom program configuration. A custom program may be changed any number of times and stored to the EEPROM/ memory used in these sensors. An 'SM' series sensor configuration can be copied, modified, and saved in a custom file directory, but cannot be changed in or deleted from the standard file directory.

A user information drop-down message will appear at each program parameter block in every configuration to give explanation or instruction of the individual functionality. By placing and pausing the cursor over any one of the parameter blocks, a drop-down message automatically appears to explain that particular functionality in the configuration.

All dimensional units for displaying the various distances associated with a configuration like sensing limits, range, deadband, etc. are selectable in either English or metric measure. This is simply selected through the "setup" drop-down menu.

Model Reference Guide - SC Configurable Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: SC6 0 6 A - B C 0 FP

SUPERPROX+ Product Series
SC3...Miniature configurable models
SC6...18 mm and flat-profile configurable models
SC9...30 mm threaded barrel configurable models

Power/Connection Type
0...12 to 24 VDC/cable style
5...12 to 24 VDC/connector style

Sensing Function
0...Discrete output - proximity
6...Analog output (SC6 and SC9 only)

Design Level
A...Applies to all models

Maximum Far Limit
SC3 Series
4...102 mm (4")

SC6 Series
B...254 mm (10")

SC9 Series
1...51 mm to 1 m (2" to 39")
4...120 mm to 2 m (4.7" to 79")
7...120 mm to 1 m (4.7" to 39") - Required for ST option
8...203 mm to 8 m (8" to 26')

Output Signal
0...Discrete models
V...Analog models - voltage output
C...Analog models - current (mA) output (except SC606 barrel style)

Functionality
0...Standard

Options
...No designator indicates no options
ST...Stainless transducer (must also specify stainless housing/120 mm to 1 m range models only
FS...Flourosilicone transducer face

Housing Types
...No designator indicates standard ULTEM®* plastic barrel housing
FP...ULTEM® flat-profile housing
S...SS303 stainless steel - 18 mm or 30 mm barrel housing

* ULTEM® is a registered trademark of the General Electric Company.

Model Reference Guide - AC441A Configurator Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

AC441A-1...US Version - with 110VAC power cord and inline supply
AC441A-2...UK Version - with 220VAC power cord and inline supply
AC441A-3...European Version - with 220VAC power cord and inline supply
AC441A-4...Austalia/New Zealand Version - wit h 220VAC power cord and inline supply
AC441A-US...Complete configuration package including: AC441A-1 configurator, 1 AC130-3 cable, AC137 adapter, and AC172 RS232 cable.

NOTE: All AC441A series models are supplied with SUPERPROX+™ software CD, power supply for appropriate country, and mounting bracket.

Requirements

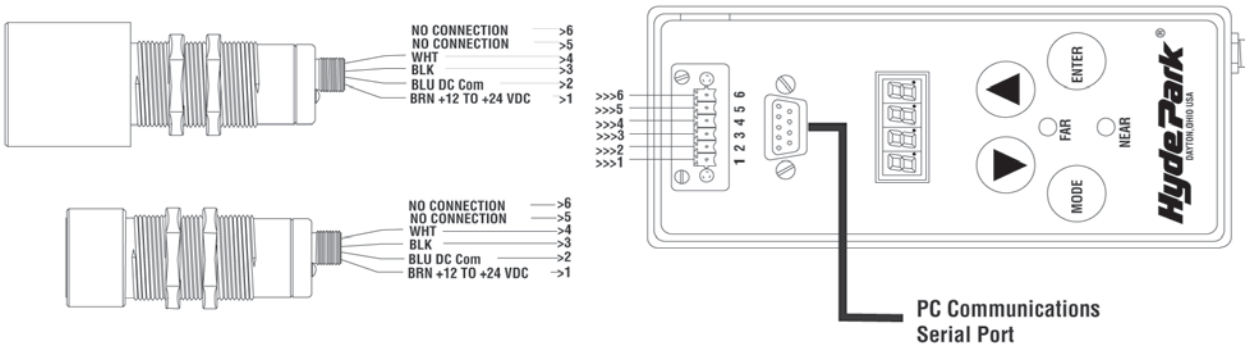
There are three basic peripheral items required to acquire full field configurating capability. In addition to the SUPERPROX+ software and the Model AC441A configurator interface module, the only other item is a straight-through DB9 serial port cable. This item is available from Hyde Park as a Model AC172 accessory cable option.

The SUPERPROX+ software is compatible for operation on all Windows 95, 98, ME, 2000, or XP operating systems. Only SUPERPROX® 300, 600, 606, 900, and 906 series sensors having an 'SC' prefix in the model number may be configured in the field with this software.

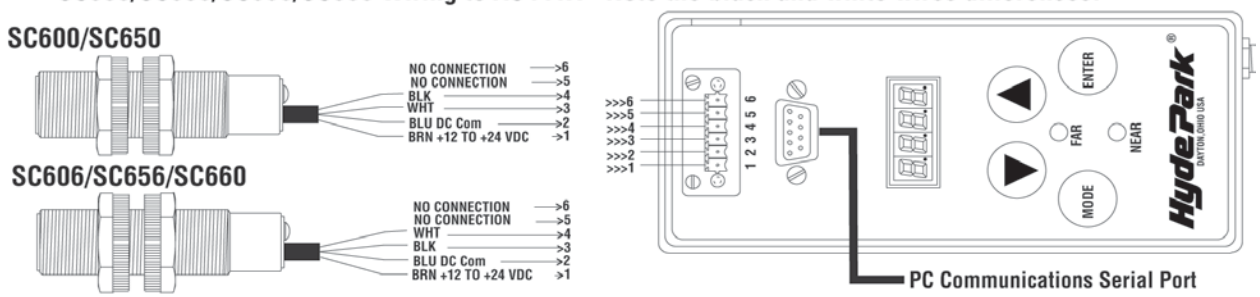
Electrical Wiring

The sensor wires must be run in conduit free of any AC power or control wires.

SC900/SC906 Wiring to AC441A

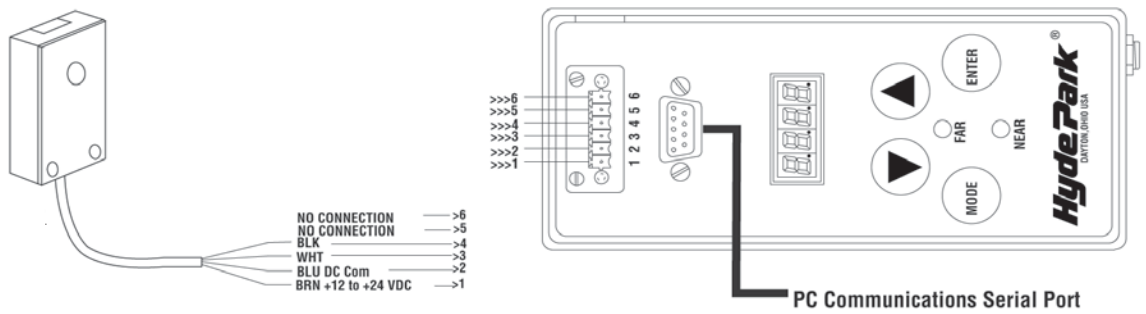


SC600/SC650/SC660/SC606 Wiring to AC441A - Note the black and white wires differences.



The SC660 has reversed outputs; a white-wire NPN and black-wire PNP output

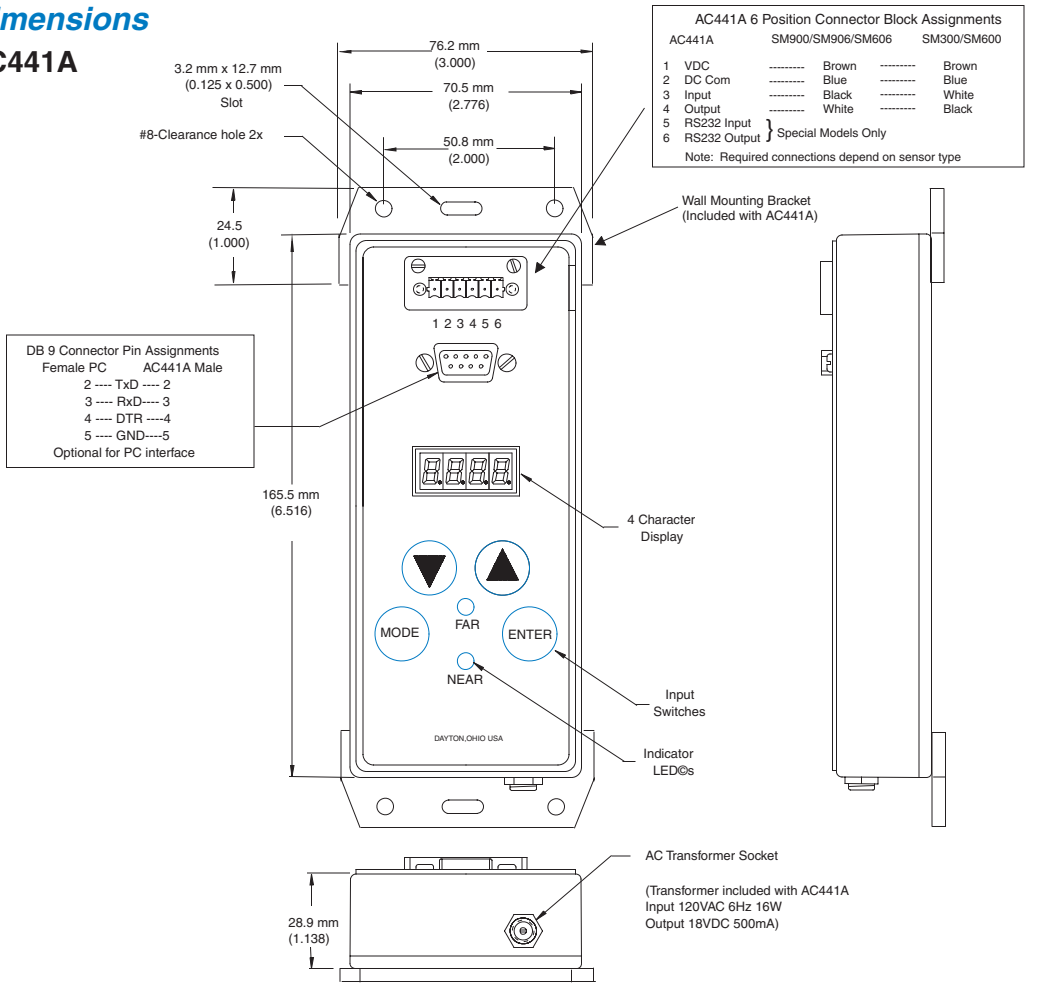
SC300/SC350/SC380 Wiring to AC441A



The SC660/SC360/SC390 has reversed outputs; a white-wire NPN and black-wire PNP output

Dimensions

AC441A



General Specifications

Model AC441A

Power Requirements

18 to 24 volts DC, 175 mA max. (includes power supply to sensor)

Power Connector

5.5 x 2.1 mm jack center negative

Power Supply

In-line, universal input: 85VAC to 265VAC, 50/60Hz
Output: 24VDC, 0.63A
Supplied with country-specific AC line cord/plug and DC output cord. Both cords are 6' in length.

Other Connections

6-pin quick disconnect for sensor DB9 female connector for PC interface.

Sensor Mounting Distance

47 m (150') maximum

Display

4-digit 7 segment 0.4" tall red LED with decimal point

Dimensions

6.37" (152 mm) x 2.76" (70 mm) x 1.15" (29 mm)

Operating Temperature

0° to 50°C (32° to 122°F) @ 10-90% non-condensing humidity. Not suitable for permanent outdoor use.

Ratings and Certifications

CE mark compliant
Declaration of Conformity available upon request

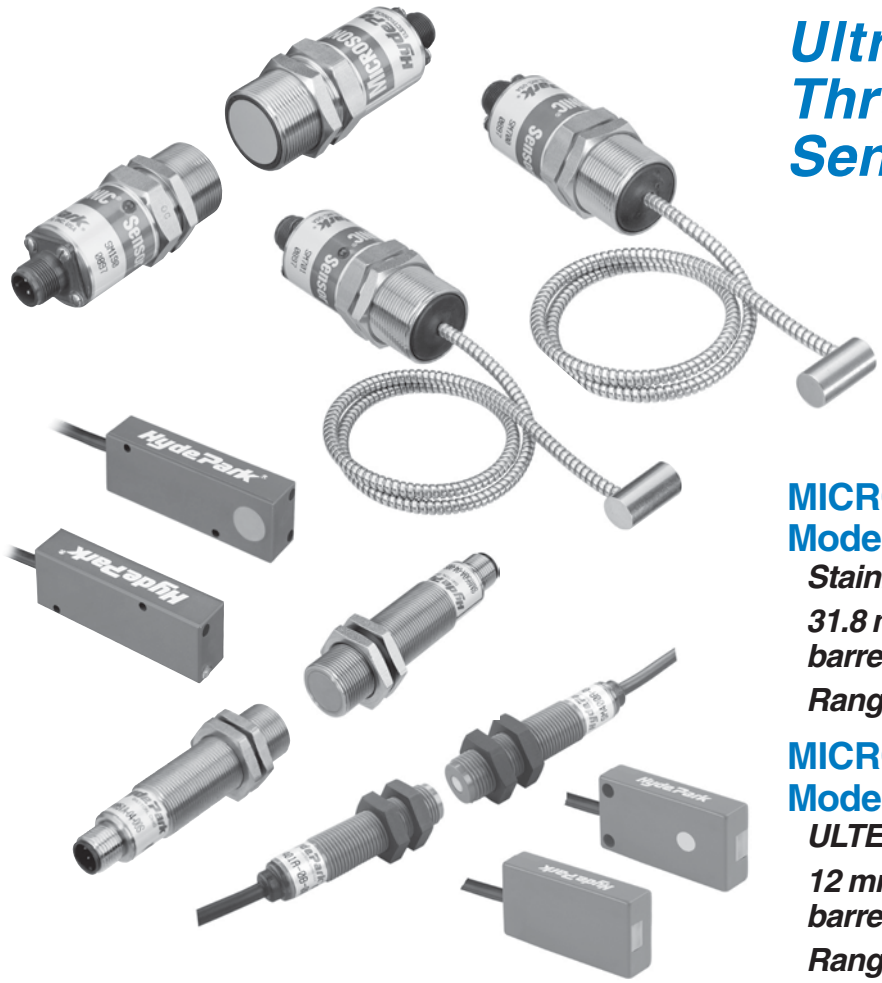
MICROSONIC® 100/400/700/800 Series Introduction



Ultrasonic Thru-beam Sensors

MICROSONIC® Model SM100 Series

Stainless steel

31.8 mm (1.25") barrel style

Range: up to 1,829 mm (72")

MICROSONIC® Model SM400 Series

ULTEM® plastic

12 mm (0.47") barrel or flat-profile style

Range: up to 203 mm (8")

MICROSONIC® Model SM700 Series

Stainless steel

31.8 mm (1.25") barrel style with 13 mm (0.5") x 25 mm (1") remote probes

Range: 381 mm (15")

MICROSONIC® Model SM800 Series

ULTEM® plastic

18 mm (0.71") barrel style or Flat-profile style

Range: up to 1,016 mm (40")

Introducing the world's finest ultrasonic thru-beam sensors

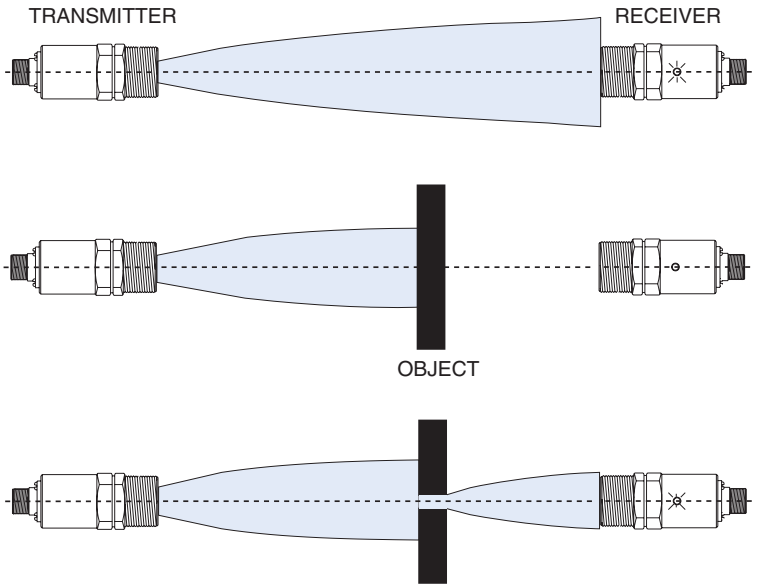
From the early MICROSONIC® SM100 Series to the latest MICROSONIC® SM400 Miniature Series and SS100 Web Sensing System, these Hyde Park noncontact sensors have earned the reputation as the best performing, ultrasonic, thru-beam sensors on the market. Wet, harsh environments, dust, ambient light, high noise levels, frequent high-pressure washdowns, and severe-duty applications are everyday working conditions for the tens of thousands of MICROSONIC® thru-beam sensors in operation today.

These sensors offer significant benefits expecially accuracy and reliability. Once set up and operating, the MICROSONIC® sensors need very little attention. Even in dusty and messy environments, these sensors reliably detect most materials ... especially clear glass, plastic, film, and irregular-shaped objects , an important advantage over many photoelectric sensors. Changing light conditions and colors have no effect on sensing capability and no sensitivity adjustments are required to compensate for inconsistent materials.

Rugged and robust, all MICROSONIC® thru-beam sensors offer a wide variety of sensing ranges, signal strengths and transmitter/receiver combinations to satisfy countless sensing needs while contributing significantly to increased productivity.

Operation

The MICROSONIC® sensors are continuous-wave devices that consist of an ultra-high-frequency transmitter and receiver positioned opposite each other, illustrated at right, at a distance of up to 1,829 mm (72"). During operation, the transmitter sends a continuous ultrasonic beam which is picked up by the receiver. When an object of any material or shape passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches. Or, when a hole as small as 3 mm (1/8") diameter allows the beam to pass through to the receiver, the output of the receiver switches.



Applications

In general, the Hyde Park line of MICROSONIC® ultrasonic thru-beam sensors is an excellent solution for applications requiring the accurate and reliable detection of objects of any material or shape within a range of1,829 mm (72"). While the kinds of applications are almost unlimited, the MICROSONIC® sensors are of particular value in tough sensing situations where the environment renders many other types of sensors inaccurate and unreliable. Take, for example, a procession of just-filled glass bottles moving rapidly from the capper on a packaging line. A sensor is detecting the leading edge of each bottle to ensure that, at the precise split second, accurate inspection will be made of the caps' presence. The line stops suddenly. It is discovered, upon inspection, that the sensor is covered with product or some other contaminant. The result is a false signal indicating a possible line backup that isn't really there...and a loss in valuable production time. The MICROSONIC® thru-beam sensor is an excellent solution in this particular application.

For applications specific to the various series of MICROSONIC® sensors, see either the product information sections that follow or the Application/Sensor Selection Chart on page 2-1.

MICROSONIC® Thru-beam Sensors

- *Self contained*
- *Meets NEMA 4X (indoor use only) & IP67 standards*
- *Survives harsh environments*
- *No sensitivity adjustments*
- *Sensing ranges up to 1,829 mm (72")*

Industry proven, these MICROSONIC® sensors increase "uptime" with reliable, thru-beam sensing in harsh, high-speed environments

In response to problems directly attributed to the harsh environments in which sensors operate today, Hyde Park offers broad application solutions with this industry-proven line of ultrasonic thru-beam sensors. First produced in 1974, the MICROSONIC® SM100 series sensors are a "workhorse" in the Hyde Park product line with tens of thousands of units continuing to perform a variety of thru-beam sensing functions throughout the world.

Using the world's leading ultrasonic sensing technology, the MICROSONIC® SM100 series sensors perform precise object detection. Of objects from transparent containers to metal parts as small as 6.4 mm (1/4") diameter at speeds in excess of 2,000 units per minute.

Unlike photoelectrics, these stainless steel sensors are virtually unaffected by splashing food, caustic cleaning solutions, frequent high-pressure washdowns, humidity, changing light conditions or colors, dust, and ambient noise. The rugged sensors need no maintenance and require no sensitivity adjustments to compensate for inconsistent product materials.

Response times range from 4 ms down to 0.6 ms. The 12 to 24 VDC circuitry and output signal make these sensors directly compatible with many programmable logic controllers, computers, and other logic control systems.

Operation

The MICROSONIC® sensors are continuous-wave devices that consist of an ultra-high-frequency transmitter and receiver positioned opposite each other, illustrated below, at a distance of up to 1,829 mm (72"). During operation, the transmitter sends a continuous ultrasonic beam which is picked up by the receiver. When an object of any material or shape passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches. Or, when a hole as small as 3 mm (1/8 inch) diameter allows the beam to pass through to the receiver, the output of the receiver switches.

With all circuitry compactly sealed in the stainless steel transmitter and receiver probes, the MICROSONIC® sensors boast a narrow, constanthigh-frequency sonic beam for high sensing resolution.

The thru-beam sensing mode is set up by mounting the sensors on the same axis opposite each other as shown in Figure 1. The distance (range) between the transmitter face and receiver face can be up to 1,829 mm (72"), depending on the model and range selected.

Positioning of the transmitter and receiver for operation is extremely important for the reliable detection of objects, particularly small ones. As the figure also shows, the width of the transmitted sound beam initially expands at a rate of 10 degrees (5 degrees each side of the common axis) as the distance between the transmitter and receiver increases. This means that if the distance between the transmitter and receiver is too

great and the object is too small, it is possible for the beam to "wrap around" the object enough to not cause the receiver output to switch, as shown in Figure 2.

Therefore, reliable detection of 13 mm (0.5") inch wide or smaller objects is achieved when the objects are allowed to pass near the face of either the transmitter or receiver. An alternative approach is to position the transmitter and receiver on parallel axes, as shown in Figure 3, so as to reduce the amount of beam reaching the receiver.

Where sensing distances are adversely affected as the environment becomes more contaminated, the MICROSONIC® sensors remain constant under adverse conditions where other sensor types fail.

Transmitter/Receiver Combinations and Sensing Ranges

Because specific sensing needs vary from one type of application to another, the MICROSONIC® SM100 series offers a variety of sensing ranges, connections, and signal strengths to maximize efficiency and productivity. See the Sensor Selection Chart in this section for the best transmitter and receiver combination.

Mounting

The MICROSONIC® thru-beam sensors should be mounted in brackets that allow them to be adjusted for proper alignment on the same axis. Hyde Park offers the Model AC201 stainless, right angle, single-thru-beam, mounting bracket, which is illustrated, with dimensions, on Page 5-6.

Minimum-size Detection:
13 mm (0.5") at 381 mm (15") range
13 mm (0.5") at 508 mm (20") range
19 mm (0.75") at 635 mm (25") range
19 mm (0.75") at 1016 mm (40") range
25 mm (1.0") at 1829 mm (72") range
Repeatability: 0.79 mm (0.031") typical

Power Requirements

Supply Voltage: 12 to 24 VDC ± 10%, regulated supply
Current Consumption: 60 mA max. (excluding load) per set
Power Consumption: 1.2 W max. (excluding load) @ 15 VDC per set

Output

NPN Sinking: 0 to 50 V, max.
Maximum on state voltage 100 mA @ 0.2 V
PNP Sourcing: 100 mA @ 24 VDC, max.
Receiver red LED "on" when beam is received

Response Time

"On" 0.6 ms or 4 ms (model dependent - see selection chart)
"Off" 0.6 ms or 4 ms (model dependent - see selection chart)

Indicators

Transmitter: None
Receiver:
Red LED: Illuminated when sonic energy is received, regardless of output state.

Connections

Cable Style Models:
Transmitter: 305 cm (10'), 20 AWG, foil shield, lead-free, PVC jacket, 2-conductor
Receiver: 305 cm (10'), 22 AWG, foil shield, lead-free,PVC jacket, 3-conductor
Connector Style Models:
Amphenol (nonwatertight) quick-disconnect style Models:
Model AC100, Transmitter:
305 cm (10'), 20 AWG, foil shield, lead-free, PVC jacket, 2-conductor
Model AC150, Receiver:
305 cm (10'), 22 AWG, foil shield, lead-free, PVC jacket, 3-conductor
Watertight (WTC) quick-disconnect style models:
Model AC107, Transmitter:
7/8-16 mini, 4 m (12'), 18 AWG, 2-conductor
Model AC108, Receiver:
7/8-16 mini, 4 m (12'), 18 AWG, 3-conductor

Protection

Power Supply: ESD
Outputs: ESD

Environmental

Operating Temperature Range:
0° to 60°C
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings:
Cable Style: NEMA 4X (indoor use only), IP67
Amphenol quick-disconnect: NEMA 1
Watertight quick-disconnect: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products. Polypropylene transducer face is available to provide resistance to corrosive chemicals, solvents, and steam.

Construction

Housing:
Shock and vibration resistant
Case: stainless steel
Transducer Face: Buna rubber with sealed fiberglass, standard; Polypropylene transducer face available
Power Cable: Nontoxic PVC jacket
LED: Polycarbonate

Accessories

Model AC100, 2-conductor, transmitter connector cable, 3 m (10'), for all SM100 series Amphenol connector-style transmitters
Model AC107, Straight, 7/8-16 mini, 2-pin, 2 conductor, mating connector cable, 4 m (12'), for all SM100 series, watertight, connector-style transmitters
Model AC108, Straight, 7/8-16 mini, 3-pin, 3 conductor, mating connector cable, 4 m (12'), for all SM100 series, watertight, connector-style receivers
Model AC150, 3-conductor, receiver connector cable, 3 m (10'), for all SM100 series Amphenol connector-style receivers
Model AC160, Cable grip for all cable-style, thru-beam sensors
Model AC201, Stainless, right-angle, single-thru beam-sensor mounting bracket, slotted for adjustment

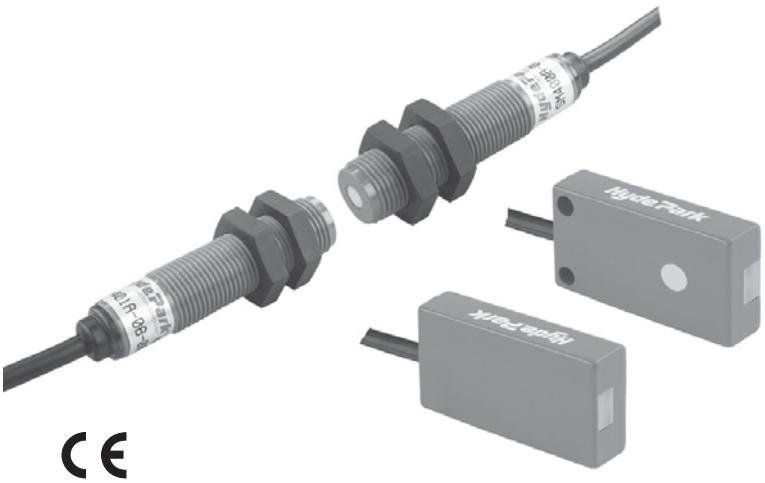
MICROSONIC® Miniature Thru-beam Sensors



- *Ideal for small object detection*
- *Sensing ranges up to 203 mm (8")*
- *Available in 12mm barrel or flat-profile housings*
- *Ideal for limited space installations*
- *CE certified*

Extremely reliable thru-beam sensing in an extremely small package with a range up to 205 mm (8")

The miniature SM400 series is powerful in sensing capability and employs the same reliable, world-leading ultrasonic technology built in to the original MICROSONIC® SM100 series. The SM400 series of thru-beam sensors is available in FDA-rated ULTEM® plastic flat-profile and 12 mm threaded barrel housings designed for small object applications where installation space is limited. An extremely reliable "across-the-line" sensing capability of up to 205 mm (8") is possible with this miniature thru-beam sensor series.

The MICROSONIC® SM400 thru-beam sensors are ideal for detecting small objects of any color or material, transparent or opaque, regular or irregular shaped, as well as those with either poor reflective or fully sound-absorbing surfaces. An output response time of 4 ms allows for the detection of objects moving at speeds of over 2000 units per minute. "Smart" sensor enhancements include solid-state sink and source outputs in normally open or closed configurations.

With protection ratings of NEMA 4X (indoor use only) and IP67, these CE certified sensors are resistant to dust, 100% humidity, most acids and bases, and high-pressure wash-downs that often times leave water buildup on the sensing face. Unlike photoelectrics, these miniature thru-beam sensors are virtually unaffected by splashing food, caustic cleaning solutions, and changing light conditions or colors. Shielding and filtering make the fully encapsulated sensors highly immune to radiated or conducted energy. The sensors are also tolerant of high noise levels and vibration with an operating temperature range of -20° to 70°C. The 12 to 24 VDC circuitry with sinking (NPN) and sourcing (PNP) outputs make these sensors directly compatible with most programmable logic controllers, computers, and other logic control systems. Available in both a cable and two connector styles (micro or pico), the receiver units have a dual color LED status indicator. An amber illumination indicates when sonic energy is being received from the transmitter. A green illumination indicates when the sonic energy is not being received from the transmitter due to either a blocking object or a misalignment between the two sensors.

Rugged, robust, and easy to set up, these sensors need no maintenance and require no sensitivity adjustments to compensate for inconsistent product materials.

The SM400 series is a cost-effective solution for a wide variety of leading-edge, trailing-edge and gap sensing applications no matter the color of the object, material, whether clear or opaque, where repeatable and reliable performance is a day in and day out requirement. Some applications include; small clear plastic or glass container detection; web registration hole or notch detection; web edge guide detection of plastic film, cellophane, photographic film, metallic foils, paper, textile fabrics; and many more.

Operation

The MICROSONIC® SM400 series sensors are continuous-wave devices that consist of a high frequency transmitter and receiver positioned opposite each other, illustrated at right, at a distance of up to 205 mm (8"). During operation, the transmitter sends a continuous ultrasonic beam which is picked up by the receiver. When an object of any material or shape passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches. Or, when a hole allows the beam to pass through to the receiver, the output of the receiver also switches.

The thru-beam sensing mode is set up by mounting the sensors on the same axis opposite each other as shown in Figure 1.

Positioning of the transmitter and receiver is extremely important for the reliable detection of objects, particularly small ones. As the figure also shows, the width of the transmitted sound beam initially expands at a rate of 10 degrees (5 degrees each side of the common axis) for the 500 kHz models as the distance between the transmitter and receiver increases. If the object is too small, it is possible for the beam to "wrap around" the object enough to prevent the output from switching, as shown in Figure 2.

Reliable detection of 13 mm wide (0.5") or smaller objects is achieved when the objects pass near the face of either the transmitter or receiver. An alternative approach is to position the transmitter and receiver on parallel axes, as shown in Figure 3, so as to reduce the amount of beam reaching the receiver. Even in harsh, messy environments, MICROSONIC® thru-beam sensors maintian thier full range where other sensor types fail.

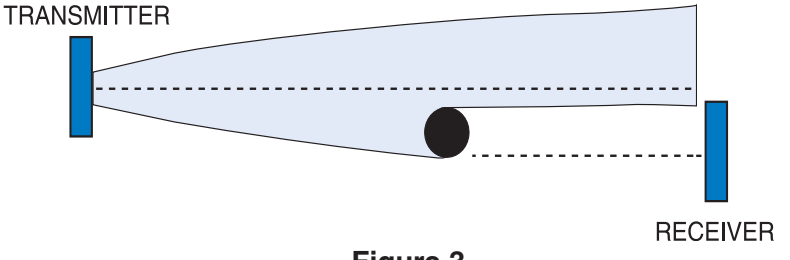

Figure 3

Mounting

The Model SM400 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment on the same axis. Hyde Park offers the following mounting accessories:

Flat-profile:

Model AC246 small right-angle stainless mounting bracket;

Model AC247 stainless and polyamide conveyor-rail clamp/bracket (illustrated with dimensions on Page 5-20).

12mm barrel:

Model AC235 small right-angle stainless mounting bracket;

Model AC236 stainless and polyamide conveyor-rail clamp/bracket;

Model AC237 straight stainless mounting bracket (illustrated with dimensions on Page 5-20).

Model Reference Guide - SM400 Series

Use the guide below to ensure the correct model number is specified for the application. Please note that not all sensor model combinations are available.

EXAMPLE MODEL: **SM4 0 1 A - 08 - 00 FP**

MICROSONIC® Product Series

Power/Connection Type
0...12 to 24 VDC / Cable style
3...12 to 24 VDC / 3-pin "PICO" connector w/PNP output
4...12 to 24 VDC / 3-pin "PICO" connector w/NPN output
5...12 to 24 VDC / 4-pin "PICO" connector
6...12 to 24 VDC / 4-pin "PICO" connector – output pins reversed
8...12 to 24 VDC / 4-pin "MICRO" connector
9...12 to 24 VDC / 4-pin "MICRO" connector – output pins reversed
Flat-Profile sensors with either connector and Threaded Barrel sensors with a "Micro" connector have a 152 mm (6") pigtail

Sensing Function
0...Transmitter

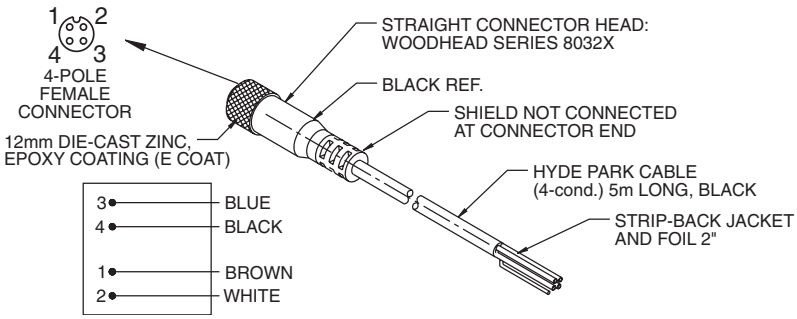
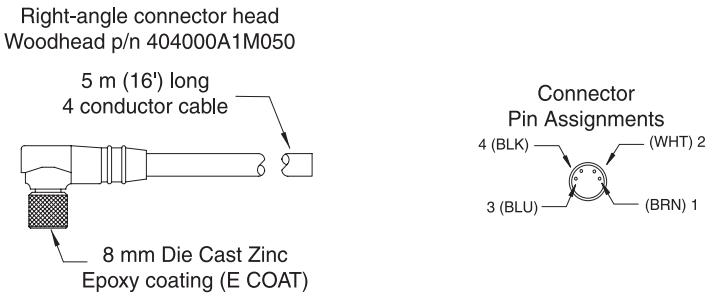
Accessories

AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for barrel and flat-profile micro sensors)



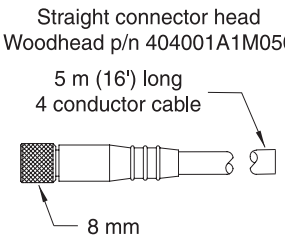
AC134

Right-angle, M8 pico, 4-conductor cable/connector assembly, 5m (16').



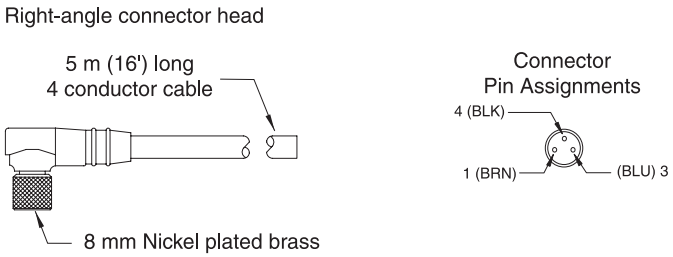
AC135

Straight, M8 pico, 4-conductor cable/connector assembly, 5m (16').



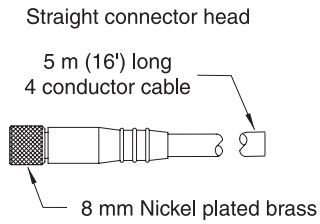
AC141

Right-angle, M8 pico, 3-conductor cable/connector assembly, 5m (16') - (for barrel connector-style sensors)



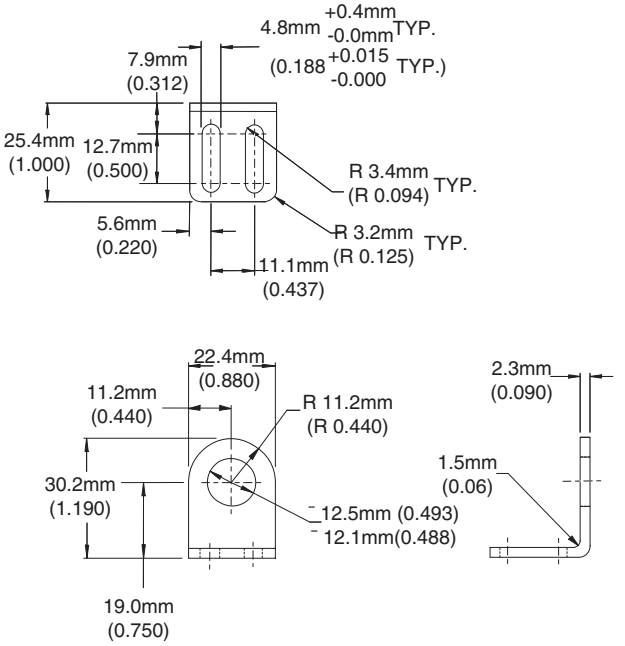
AC142

Straight, M8 pico, 3-conductor cable/connector assembly, 5m (16') - (for barrel connector-style sensors)



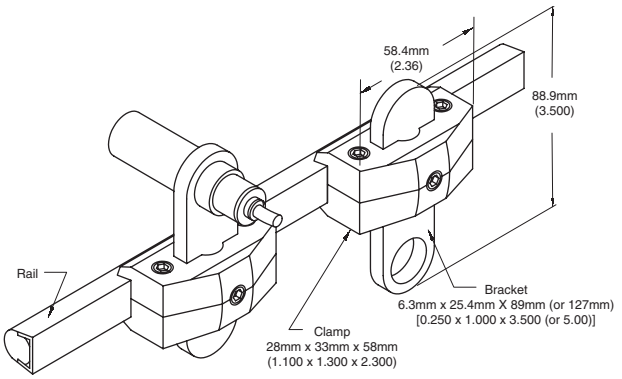
AC235

Right-angle, stainless, mounting bracket (for 12 mm barrel sensors)



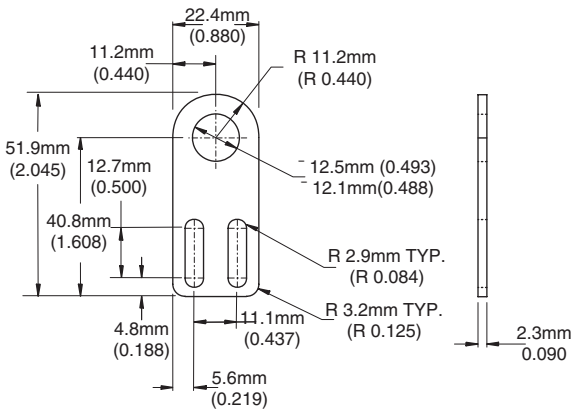
AC236

Stainless and polyamide conveyor-rail clamp/ bracket set (for 12mm barrel sensor)



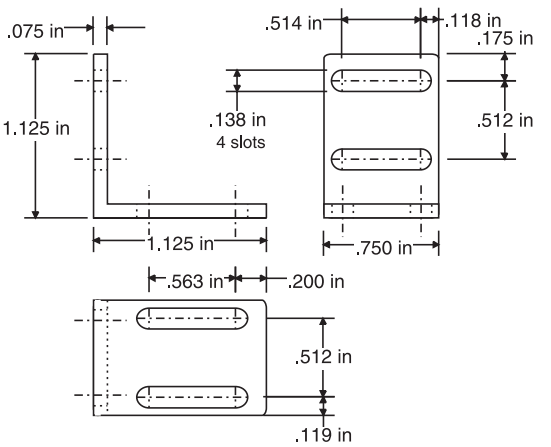
AC237

Straight, stainless, mounting bracket (for 12 mm barrel sensors)



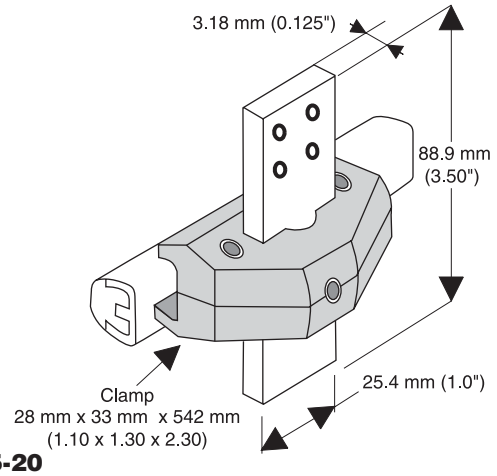
AC246

Stainless and polyamide conveyor-rail clamp/ bracket set (for Flat-Profile sensor)



AC247

Stainless and polyamide conveyor-rail clamp/ bracket set (for Flat-Profile sensor)



General Specifications

Sensing

Ranges:102 mm (4.0"), 204 mm (8.0")
Sonic Frequency: 500 kHz
Minimum-size Detection: 12.2 mm (0.50") at 102 mm (4.0") range 25.4 mm (1.0") at 204 mm (8.0") range
Repeatability: 0.79mm (0.031") typical

Power Requirements

Supply Voltage: 12VDC to 24VDC ± 10%, regulated supply
Current Consumption: 50 mA per set max.
Power Consumption: 1.2 W max. @ 24 VDC per set

Output

Sinking Output (NPN):
Maximum on-state voltage: 0.75 V @ 100 mA
Maximum load current: 100 mA
Maximum applied voltage: 30 VDC
Sourcing Output (PNP):
Maximum on-state voltage drop: 1.10 V @ 100mA
Maximum load current: 100mA
Output voltage: V_{Supply} - 1.10 V @ 100mA

Response Time

"On" 0.4 ms or 4 ms
(Model dependent - see selection chart)
"Off" 0.4 ms or 4 ms
(Model dependent - see selection chart)

Indicators

Transmitter: Green
Receiver:
Amber LED: Illuminated when sonic energy is received, reagardless of output state
Green LED: Indicates sonic beam is blocked

Connections

Transmitter cable style model SM400 series:
28 AWG, foil shield, lead-free, PVC jacket 2-conductor, 3M (10') long
Transmitter connector style model SM450 series:
Flat-profile pigtail 150 mm (6.0") long pico-connector
Transmitter connector style model SM480 series:
Flat-profile pigtail 150 mm (6.0") long pico-connector
Receiver cable style model SM401 series:
28 AWG, foil shield, lead-free, PVC jacket 4-conductor, 3M (10') long
Receiver connector style model SM451 series:
Barrel style pico-connector
Flat-profile pigtail 150 mm (6.0") long pico-connector
Receiver connector style model SM481 series:
Flat-profile pigtail 150 mm (6.0") long pico-connector

Protection

Power Supply: Current-limited over-voltage, ESD, reverse polarity
Outputs: Current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
-20° to 65°C (-4° to 136°F) @ 24V supply
-20° to 70°C (-4° to 144°F) @ 20V supply
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings:
Cable Style: NEMA 4X (indoor use only), IP67
Watertight "micro" quick-disconnect: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

EMC: EN 61326:1997 (industrial including amendment A1:1998
Safety: En 61010-1
Declaration of Conformity available upon request

Construction

Case (barrel and flat-profile types):ULTEM®* plastic (FDA Approved)
Transducer Face: Epoxy
Sensor Cables: Lead-free, PVC jacketed, black
LED lens: Polycarbonate

* ULTEM® is a registered trademark of The General Electric Co.

Accessories

Model AC118, Right-angle, M12 micro, 4-pin, 2-conductor, connector/cable assembly, 5 m (16'), for SM480 series micro connector transmitters
Model AC128, Straight, M12 micro, 4-pin, 2-conductor, connector/cable assembly, 5 m (16'), for SM480 seriesmicro connector transmitters
Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for SM481 micro connector receivers
Model AC134, Right-angle, M8 pico, 4-conductor, connector/cable assembly, 5m (16') for SM350 and SM451 series sensors
Model AC135, Straight, M8 pico, 4-conductor, connector/ cable assembly, 5m (16') for SM350 and SM451 series sensors
Model AC137, Pico-to-micro pigtail adapter cable for barrel connector-style sensors
Model AC138, Pico-to-micro pigtail adapter cable, output pins reversed for barrel connector-style sensors
Model AC141, Right-angle, M8 pico, 3-conductor pico connector/cable assembly, 5 m (16') for SM431 connector-style receivers
Model AC142, Straight, M8 pico, 3-conductor pico connector/cable assembly, 5 m (16') for SM431 connector-style receivers
Model AC143, Right-angle, M8 pico, 3-pin, 2 conductor connector/cable assembly, 5 m (16') for SM430 connector-style transmitters (same housing as AC141)
Model AC144, Straight, M8 pico, 3-pin, 2-conductor connector/cable assembly, 5 m (16') for SM430 connector-style transmitters (same housing as AC142)
Model AC145, Right-angle, M8 pico, 4-pin, 2 conductor connector/cable assembly, 5 m (16') for SM450 connector-style transmitters (same housing as AC134)
Model AC146, Straight, M8 pico, 4-pin, 2-conductor connector/cable assembly, 5 m (16') for SM450 connector-style transmitters (same housing as AC135)
Model AC235, Right-angle stainless mounting bracket for barrel connector-style sensors
Model AC236, Stainless and polyamide conveyor-rail clamp/bracket set for barrel connector-style sensors
Model AC237, Straight stainless mounting bracket for barrel connector-style sensors
Model AC246, Right-angle, stainless, mounting bracket for flat-profile style sensors
Model AC247, Stainless and polyamide conveyor-rail clamp/bracket set for flat-profile style sensors

MICROSONIC® Remote Thru-beam Sensors

- *Ideal for limited spaces*
- *High repeatability and reliability*
- *Self contained*
- *Sensing range 381 mm (15")*
- *Meets NEMA 4X (indoor use only)/ IP67 standards*

MICROSONIC® remote ultrasonic sensors put precise, thru-beam sensing in hard-to-reach areas

Utilizing the same world-leading ultrasonic sensing technology built into the SM100 series of MICROSONIC® thru-beam sensors, the SM700 series of remote thru-beam sensors takes the accurate detection of objects almost anywhere. Stainless steel armor cables, available in three different lengths, 508 mm (20"), 1016 mm (40") and 1270 mm (50"), link selected standard SM100 series thru-beam transmitters and receivers with the remote stainless steel probes. Designed for extremely tight areas where it is either difficult or impossible to mount and use the SM100 series sensors, these remote sensors have right-angle style probes to further facilitate thru-beam setup and operation.

Unlike photoelectrics, these stainless steel remote sensors are virtually unaffected by splashing food, caustic cleaning solutions, frequent high-pressure washdowns, humidity, changing light conditions or colors, dust, and ambient noise. The rugged sensors need no maintenance and require no sensitivity adjustments to compensate for inconsistent product materials.

Response times, ranging from 4 ms down to 0.6 ms, make the MICROSONIC® Model SM700 series of remote thru-beam sensors particularly effective in critical, high-speed, machine process applications. These applications include: double sheet (tissue) detection, film and web hole detection, lead-edge gating, edge-guide monitoring, and transparent object detection.

The 12 to 24 VDC circuitry and output signal make these sensors directly compatible with many programmable logic controllers, computers, and other logic control systems.

Operation

The MICROSONIC® sensors are continuous-wave devices that consist of an ultra-high-frequency transmitter and receiver positioned opposite each other, illustrated at right, at a distance of up to the range of 381 mm (15"). During operation, the transmitter sends a continuous ultrasonic beam which is picked up by the receiver. When an object of any material or shape passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches.

With all circuitry compactly sealed in the stainless steel transmitter and receiver probes, the MICROSONIC® sensors boast a narrow, constant, high-frequency sonic beam for high sensing resolution.

The thru-beam sensing mode is set up by mounting the sensors on the same axis opposite each other as shown in Figure 1. The distance (range) between the transmitter face and receiver face can be up to 381 mm (15").

Positioning of the transmitter and receiver for operation is extremely important for the reliable detection of objects, particularly small ones. As the figure also shows, the width of the transmitted sound beam initially expands at a rate of 10 degrees (5 degrees each side of the common axis) as the distance between the transmitter and receiver increases. This means that if the distance between the transmitter and receiver is too great and the object is too small, it is possible for the beam to "wrap around" the object enough to not cause the receiver output to switch, as shown in Figure 2.

Therefore, reliable detection of small objects is achieved when the objects are allowed to pass near the face of either the transmitter or receiver. This may also be achieved by moving the probes closer together as shown in Figure 3.

Where sensnsing distances are adversely affected as the environment becomes more contaminated, the MICROSONIC® sensors remain constant under adverse conditions where other sensor types fail.

Mounting Accessories

The Model SM700 series remote thru-beam sensors should be mounted in brackets that allow them to be adjusted for proper alignment on the same axis.

Hyde Park offers the Model AC201 stainless, right-angle, single-thru-beam-sensor, mounting bracket and the Model AC213 stainless and Teflon, remote sensing probe mounting bracket which are illustrated, with dimensions, on Page 5-28.

General Specifications

Sensing

Range: 381 mm (15")
Sonic Frequency: 180 kHz
Minimum-size Detection: 9.5 mm (0.375") with object close to sensor
Repeatability: 0.30 mm (0.012") max.

Power Requirements

Supply Voltage: 12 to 24 VDC ± 10%, regulated supply
Current Consumption: 60 mA max. (excluding load) per set
Power Consumption: 1.2 W max. (excluding load) @ 15 VDC per set

Output

NPN Sinking: 0 to 50 V, max.
Maximum on state voltage 0.2 V @ 100 mA
PNP Sourcing: 100 mA @ 24 VDC, max.
Receiver red LED "ON" when beam is received

Response Time

"On" 0.6 ms or 4 ms
(Model dependent - see selection chart)
"Off" 0.6 ms or 4 ms
(Model dependent - see selection chart)

Indicators

Transmitter: None
Receiver:
Red LED: Illuminated when sonic energy is received, regardless of output state.

Connections

Cable Style Models:
Transmitter: 305 cm (10'), 20 AWG, foil shield, lead-free, PVC jacket, 2-conductor
Receiver: 305 cm (10'), 22 AWG, foil shield, lead-free, PVC jacket, 3-conductor
Connector Style Models:
Amphenol (nonwatertight) quick-disconnect style models:
Model AC100, Transmitter:
305 cm (10'), 20 AWG, foil shield, lead-free, PVC jacket, 2-conductor
Model AC150, Receiver:
305 cm (10'), 22 AWG, foil shield, lead-free, PVC jacket, 3-conductor
Watertight (WTC) quick-disconnect style models:
Model AC107, Transmitter:
7/8-16 mini, 4 m (12'), 18 AWG, 2-conductor
Model AC108, Receiver:
7/8-16 mini, 4 m (12'), 18 AWG, 3-conductor

Protection

Power Supply: ESD
Outputs: ESD

Environmental

Operating Temperature Range: 0° to 60°C
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings:
Cable Style: NEMA 4X (indoor use only), IP67
Amphenol Quick-disconnect: NEMA 1
Watertight Quick-disconnect: NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products. Polypropylene transducer face is available to provide resistance to corrosive chemicals, solvents, and steam.

Construction

Housing: Shock and vibration resistant
Case: Stainless steel
Remote Cable: Stainless steel armor
Transducer Face: silicone rubber, standard
Sensor Cables: Nontoxic PVC jacket
LED: Polycarbonate

Accessories

Model AC100, 2-conductor, transmitter connector cable, 3 m (10'), for all SM700 series Amphenol connector-style transmitters
Model AC107, Straight, 7/8-16 mini, 2-pin, 2 conductor, mating connector cable, 4 m (12'), for all SM700 series watertight, connector-style, transmitters
Model AC108, Straight, 7/8-16 mini, 3-pin, 3 conductor, mating connector cable, 4 m (12'), for all SM700 series watertight, connector-style receivers
Model AC150, 3-conductor, receiver connector cable, 3 m (10'), for all SM700 series Amphenol connector-style receivers
Model AC160, Cable grip for all cable-style, thru-beam sensors
Model AC201, Stainless, right-angle, single-thru beam-sensor, mounting bracket, slotted for adjustment
Model AC213, Stainless and Teflon, remote sensing probe, mounting bracket

See page 7-1 for accessory photos.

MICROSONIC® Thru-beam Sensors

- **Ideal for small object detection**
- **Sensing ranges up to 1016 mm (40")**
- **Available in barrel or flat-profile types**
- **Ideal for limited space installations**
- **CE certified**

Extremely reliable thru-beam sensing in a smaller package and ranges up to 1016 mm (40")

They are miniature in size, powerful in sensing capability, and the product of the same reliable, world-leading ultrasonic technology built into the original MICROSONIC® SM100 series. The SM800 series of thru-beam sensors is available in 18 mm FDA rated ULTEM® plastic and stainless steel barrel housings and in ULTEM® plastic "flat-profile" housings designed for small-object applications where installation space is limited. "Across-the-line" sensing versatility includes standard sensing ranges of 102 mm (4") and 305 mm (12") and extended sensing ranges of 610 mm (24") and 1016 mm (40").

The SM800 thru-beam sensors are ideal for detecting small objects of any color or material that are transparent or opaque, regular or irregular shaped, as well as those with either poor reflective or fully sound-absorbing surfaces. Response times of either 4 ms or 0.4 ms allow the detection of objects moving at speeds of over 2000 units per minute. "Smart" sensor enhancements include clean switching delay and output polarity variations.

With protection ratings of NEMA 4X (indoor use only) and IP67, the sensors are resistant to dust, 100% humidity, most acids and bases, and high-pressure washdowns that often leave water buildup on the sensing face. Unlike photoelectrics, these miniature thru-beam sensors are virtually unaffected by splashing food, caustic cleaning solutions, and changing light conditions or colors. Shielding and filtering makes the fully encapsulated sensors highly immune to radiated or conducted energy. They are also tolerant of high noise levels, vibration, and a storage temperature range of -10° to 100° C.

Equipped with sinking type (NPN) and sourcing type (PNP) outputs, the 12 to 24 VDC circuitry and output signal make these sensors directly compatible with many programmable logic controllers, computers, and other logic control systems. Available in either cable or "micro" connector style, the receiver units of the CE certified sensors have an amber LED that illuminates when sonic energy is received, regardless of output state. The micro connector style receivers are also equipped with a green LED to indicate that power is being supplied to the sensor.

Rugged, robust, and easy to set up, these sensors need no maintenance and require no sensitivity adjustments to compensate for inconsistent product materials.

Applications include the detection of such objects as clear 2-liter P.E.T. bottles, metal parts as small as 6.4 mm (0.25") diameter, powdery products, shaped cans, photographic films, fabrics, and corrugated boxes up to 991 mm (39") wide. They are the solution for lead-edge detection and for a wide variety of applications that require repeatable and reliable, cost-effective sensing performance day in and day out.

Operation

The SM800 series sensors are continuous-wave devices that consist of a high-frequency transmitter and a receiver positioned opposite each other, illustrated at right, at a distance of up to 1016 mm (40"). During operation, the transmitter sends a continuous ultrasonic beam which is picked up by the receiver. When an object of any material or shape passes between the transmitter and receiver and breaks the beam, object presence is detected and the output of the receiver switches. Or, when a hole allows the beam to pass through to the receiver, the output of the receiver switches.

With all circuitry compactly sealed in the plastic and stainless steel transmitter and receiver probes, the MICROSONIC® sensors boast a narrow, constant, ultra-high frequency sonic beam for high sensing resolution. The sensors are available in two different operating frequencies: 500 kHz for a standard sensing range of up to 305 mm (12") and 200 kHz for an extended sensing range of up to 1016 mm (40").

The thru-beam sensing mode is set up by mounting the sensors on the same axis opposite each other as shown in Figure 1.

Positioning of the transmitter and receiver for operation is extremely important for the reliable detection of objects, particularly small ones. As the figure also shows, the width of the transmitted sound beam initially expands at a rate of 10 degrees (5 degrees each side of the common axis) for the 500 kHz models (and 20 degrees for the 200 kHz models) as the distance between the transmitter and receiver increases. This means that if the distance between the transmitter and receiver is too great and the object is too small, it is possible for the beam to "wrap around" the object enough to not cause the receiver output to switch, as shown in Figure 2.

Therefore, reliable detection of 13 mm (0.5") inch wide or smaller objects is achieved when the objects are allowed to pass near the face of either the transmitter or receiver. An alternative approach is to position the transmitter and receiver on parallel axes, as shown in Figure 3, so as to reduce the amount of beam reaching the receiver.

Where sensing distances are adversely affected as the environment becomes more contaminated, the MICROSONIC® sensors remain constant

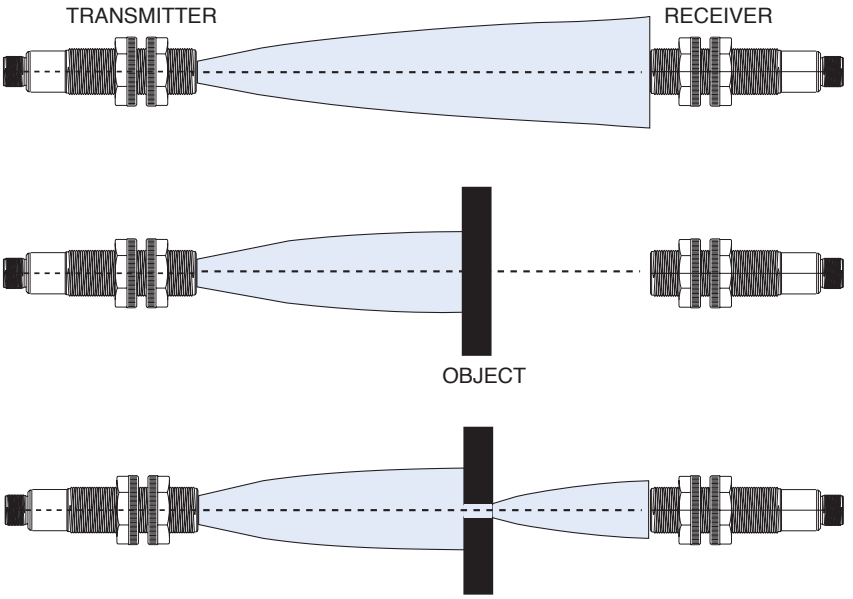

Figure 1

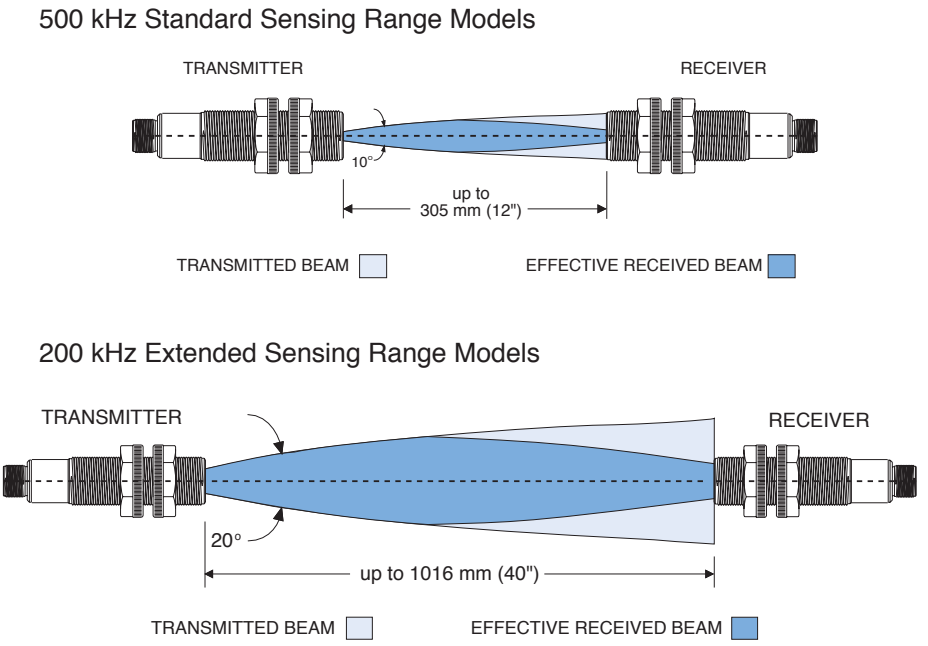

Figure 1, Thru-beam Patterns and Ranges

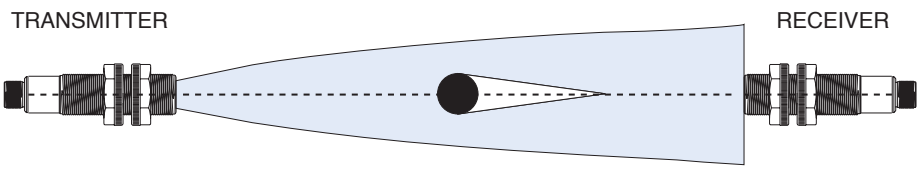

Figure 2

under adverse conditions where other sensor types fail.

Mounting

The Model SM800 series sensors should be mounted in brackets that allow them to be adjusted for proper alignment on the same axis. Hyde Park offers the Model AC226 stainless and polyamide conveyor-rail clamp/ bracket set, Model AC227 large, right-angle, stainless mounting bracket, Model AC228 small, right-angle, stainless, mounting bracket, Model AC231 straight, stainless, mounting bracket and Model AC232 s-shaped, stainless, mounting bracket which are illustrated with dimensions, on Pages 5-37 and 5-38.

(ULTEM® plastic)

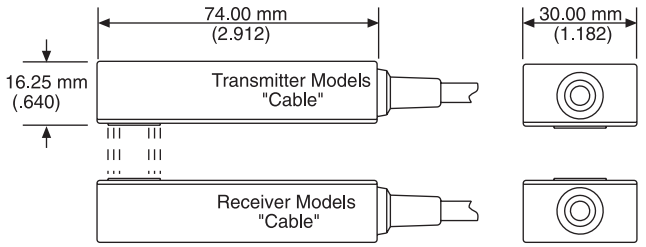
Transmitter Models:

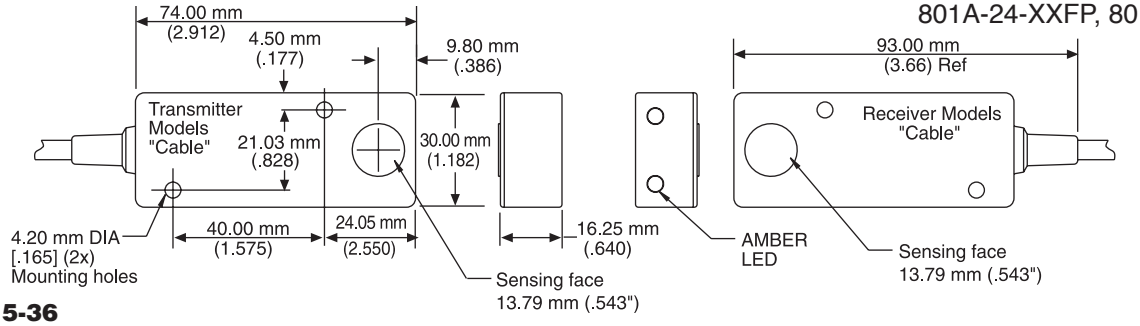
SM800A-04-XXFP, 800A-12-XXFP, 800A-24-XXFP, 800A-40XXFP

"Flat-profile" Cable Style
(ULTEM® plastic)

Receiver Models:

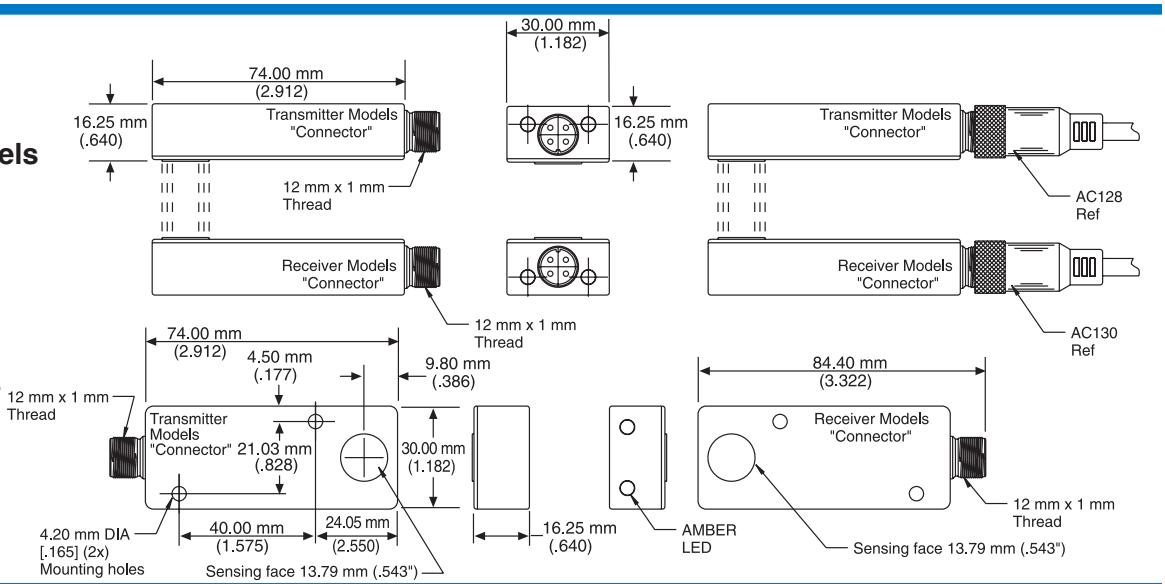
SM801A-04-XXFP, 801A-12-XXFP, 801A-24-XXFP, 801A-40-XXFP





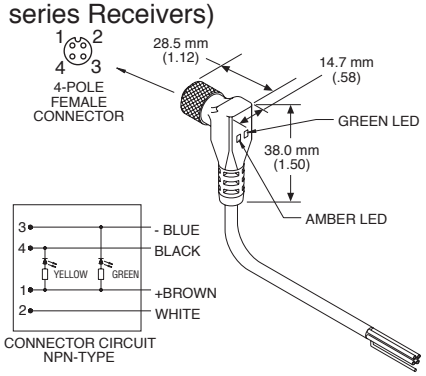
"Flat-profile" Connector Style
(ULTEM® plastic)
Transmitter Models
SM850A-04-XXFP,
SM850A-12-XXFP,
SM850A-~~20~~-XXFP,

"Flat-profile" Connector Style
(ULTEM® plastic)
Receiver Models
SM851A-04-XXFP,
SM851A-12-XXFP,
SM851A-24-XXFP,
SM851A-40-XXFP

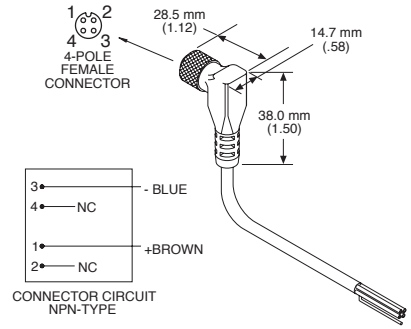


Mounting Accessories

AC117 Right-angle, M12 micro, 4-conductor, connector/cable assembly with built-in LEDs (for SM851 series Receivers)

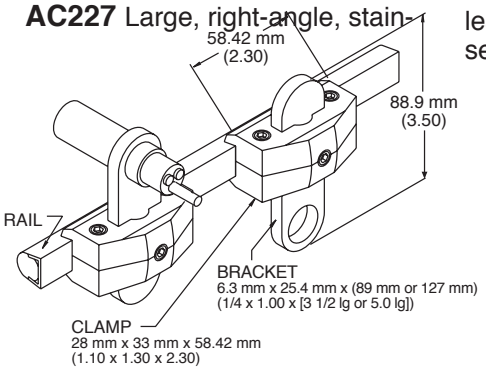


AC118 Right-angle, M12 micro, 2-conductor, connector/cable assembly (for SM850 series Transmitters)

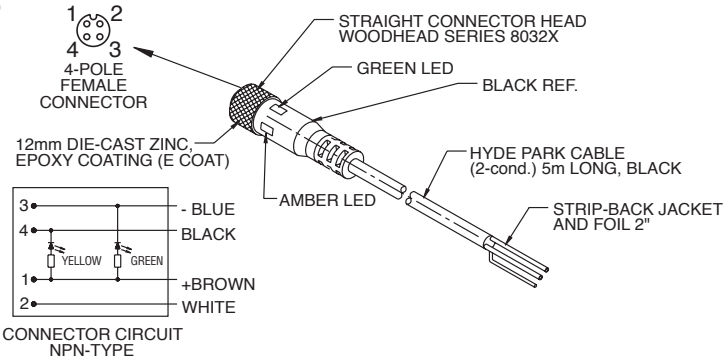


AC226 Stainless and polyamide conveyor-rail clamp/bracket set (for 18 mm barrel sensors)

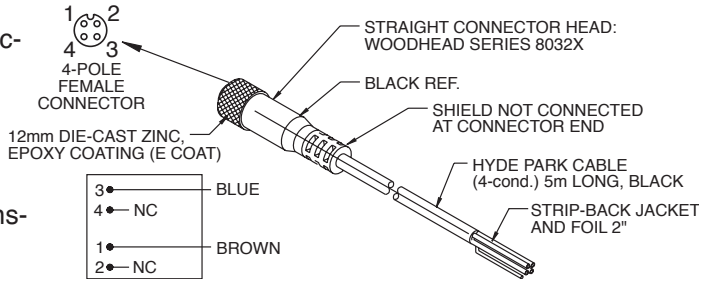
AC227 Large, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



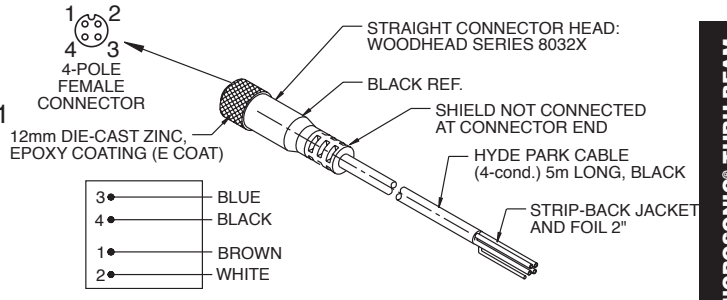
AC127 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs (for SM851 series connector-style Receivers)

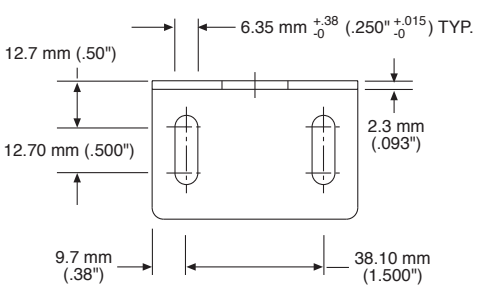


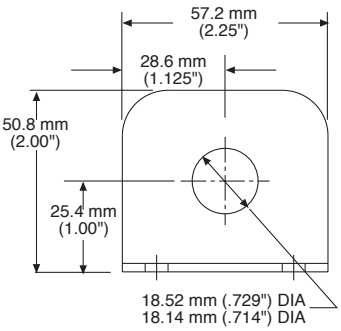
AC128 Straight, M12 micro, 2-conductor, connector/cable assembly, 5 m (16') (for SM850 Series, flat-profile, connector-style Transmitters)



AC130 Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16') (for SM851 Series, flat-profile, connector-style Receivers)

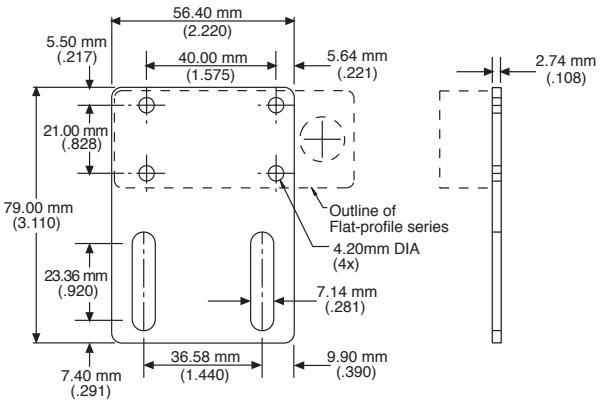




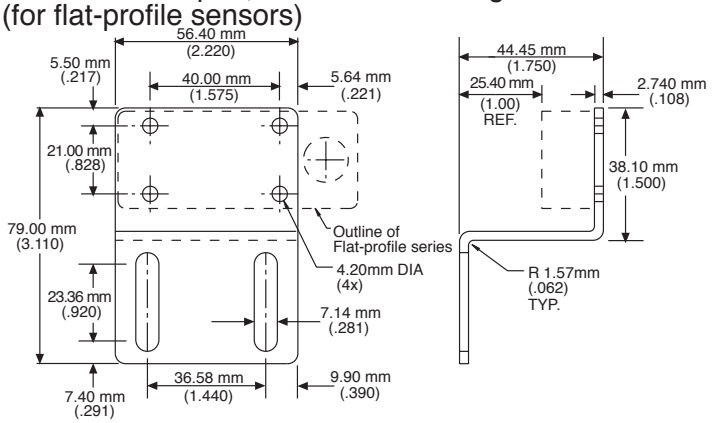


Mounting Accessories (cont.)

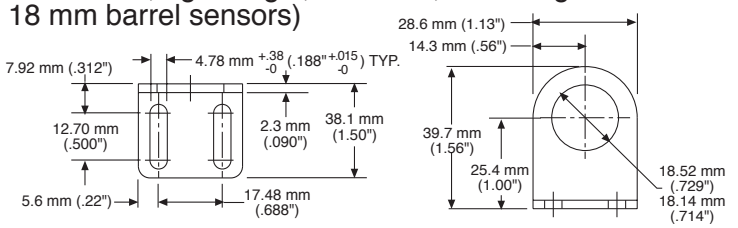
AC231 Straight, stainless mounting bracket (for flat-profile sensors)



AC232 S-shaped, stainless mounting bracket (for flat-profile sensors)



AC228 Small, right-angle, stainless, mounting bracket (for 18 mm barrel sensors)



General Specifications

Sensing

Ranges:
102 mm (4"), 305 mm (12"),
610 mm (24"), 1016 mm (40")
Sonic Frequency:
500 kHz: 102 mm (4") & 305 mm (12") ranges
200 kHz: 610 mm (24") & 1016 mm (40") ranges
Minimum-size Detection:
12.7 mm (0.50") at 102 mm (4") range
25 mm (1.0") at 305 mm (12") range
38 mm (1.5") at 610 mm (24") range
114 mm (4.5") at 1016 mm (40") range
Repeatability: 0.79 mm (0.031") typical

Power Requirements

Supply Voltage: 12 to 24 VDC ± 10%, regulated supply
Current Consumption: 90 mA per set
Power Consumption: 2.2 W max. @ 24 VDC per set

Output

NPN Sinking: 0 to 30 V
Maximum on state voltage 0.2 V @ 100 mA
PNP Sourcing: 100 mA @ 24 VDC, max.
Receiver amber LED "ON" when beam is received

Response Time

"On" 0.4 ms or 4 ms
(Model dependent - see selection chart)
"Off" 0.4 ms or 4 ms
(Model dependent - see selection chart)

Indicators

Transmitter: None
Receiver:
Amber LED: Illuminated when sonic energy is received, regardless of output state.
Green LED: Indicates that power is being supplied ("micro" connector style only).

Connections

Transmitter cable style model SM800 series:
3 m (10'), 24 AWG, foil shield, lead-free, PVC jacket 2-conductor
Transmitter connector style model SM850 series:
Model AC118 M12 micro, watertight quick-disconnect, right-angle, 5 m (16'), 12 mm, 24 AWG, 2-conductor, foil shield
Receiver cable style model SM801 series:
3 m (10'), 24 AWG, foil shield, lead-free, PVC jacket 4-conductor
Receiver connector style model SM851 series:
Model AC117 M12 micro, watertight quick-disconnect, right-angle, 5 m (16'), 12 mm, 24 AWG, 4-conductor, foil shield
(Note: Connector-style sensor does not have LEDs. The cable assembly provides this feature.)

Protection

Power Supply: Current-limited over-voltage, ESD, reverse polarity
Outputs: Current-limited over-voltage, ESD, over-current

Environmental

Operating Temperature Range:
0° to 60°C
Storage Temperature Range: -40° to 100°C (-40° to 212°F)
Operating Humidity: 100%
Protection Ratings:
Cable Style: NEMA 4X (indoor use only), IP67
Watertight "micro" quick-disconnect:
NEMA 4X (indoor use only), IP67
Chemical Resistance: Resists most acids and bases, including most food products.

Agency Approvals

CE Mark: **CE** conformity is declared to:
EN61010-1:1990 including amend. No. 1:1992 and amend. No.2:1995, EN50082-1, EN55011 Group 1 Class B.
Declaration of Conformity available upon request

Construction

Housing: Shock and vibration resistant
Case (barrel and flat-profile types): ULTEM®* blue plastic (FDA Approved)
(SS303 stainless steel available for barrel types)
Transducer Face: Silicone rubber - gray
Sensor Cables: Lead-free PVC jacket, black (Model AC117)
LED: Polycarbonate

* ULTEM® is a registered trademark of The General Electric Co.

Accessories

18 mm Barrel Mounting Hardware and Cables

Model AC117, Right-angle, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs, for SM851 series receivers
Model AC118, Right-angle, M12 micro, 2-conductor, connector/cable assembly, 5 m (16'), for SM850 series transmitters
Model AC127, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with built-in LEDs for SM851 series connector-style receivers
Model AC226, Stainless and polyamide conveyor-rail
clamp/bracket set
Model AC227, Large, right-angle, stainless, mounting
bracket
Model AC228, Small, right-angle, stainless, mounting
bracket

Flat-profile Mounting Hardware and Cables

Model AC128, Straight, M12 micro, 4-pin, 2 conductor, connector/cable assembly, 5 m (16'), for SM850 series, flat-profile, connector-style Transmitters
Model AC130, Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), for flat-profile, for SM851 series, flat-profile, connector-style receivers
Model AC231, Straight, stainless, mounting bracket
Model AC232, S-shaped, stainless, mounting bracket

See page 7-1 for accessory photos.

PYTHON POWER™

AC/DC Power Supply/ Output Converter

- ***Self-contained, AC/DC power converter***
- ***Integral isolated TRIAC output***
- ***Sleek design***
- ***Stored in or pulled through a 1" straight conduit***
- ***IP67 enclosure rating***
- ***CE certified***
- ***NEMA 4X (indoor use only)***

A cost-effective power and output conversion accessory for DC sensors.

Python Power™ is an accessory that allows a DC sensor to be installed in locations where only AC power is available or to simply maximize installation efficiency.

Python consists of a universal, in-line AC/DC power supply and TRIAC switch. The integral TRIAC output switch is controlled by the sensor's low-voltage output, automatically detecting a sinking or sourcing output. The TRIAC is then actuated.

The DC output will power most types of sensors, allowing users to take advantage of the advanced features available in DC sensors that are not available in AC sensors. Unlike other products, Python has a sleek design and can be pulled through and stored in a 1-inch straight conduit.

Python is a powerful performer and an ideal converter for retro-fit installations.

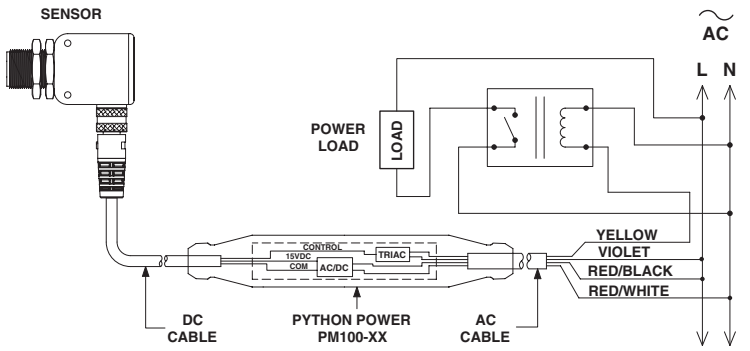
Accepting universal AC input voltages from 85VAC to 265VAC, the encapsulated housing and integral cables are resistant to most acids, bases, and food and beverage.

Python is UL listed to UL61010C-1 and CE certified to EN61010C-1. Python's IP67 enclosure rating ensures it will withstand washdown environments.

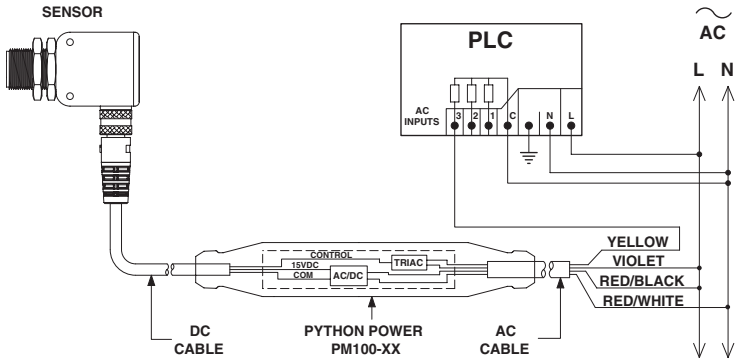
Python supports many sensing applications where DC power is unavailable. Because of this versatility, it is a solid candidate for almost every application in an AC environment. Python is an ideal converter for retro-fit installations and a cost-effective, time-saving solution for new installations. Python accommodates all Hyde Park DC-powered sensors, as well as most other brands. Python can be used with most any sensing technology, including ultrasonic, photoelectric, and inductive proximity.

Operation

Depending on the type of sensor you are using, Python's model number will vary (see Model Reference Guide on page 6-3). The sensor you are using must operate on a 15VDC to 18VDC supply, consume 100mA or less of operating current, and have a sink or source output.



DRIVING POWER RELAY



TYPICAL PLC CONNECTION

WARNING: Applied AC load must limit Python's TRIAC switch to rated current.

WARNING: Applied AC load must limit Python's TRIAC switch to rated current.

⚠ CAUTION

UNINTENDED OPERATION

Apply an AC Load that limits Python's TRIAC switch to rated current

Failure to follow this instruction can result in injury or equipment damage

General Specifications

AC Power Requirements

Supply Voltage: 85VAC to 265VAC, 50/60Hz
Current Consumption: 35 mA max.
Power Consumption: 4 VA max.
Installation category: II (IEC 60364-4-443)
Input fusing: non-replaceable, non-repairable

DC Output Ratings (to sensor)

Output voltage:
Minimum at rated current: 15VDC
Maximum at no load: 20VDC
Regulation: 40 V/A
Current, max. rated: 100mA
Current fault, max.: 200 mA
Pri/sec. isolation: 2200VAC, 1 min.
Turn-on delay, 100mA load, 90% final voltage: 10ms typical
Turn-off delay, 0mA load, 10% full voltage: 1s typical

TRIAC Switch Ratings (switch AC current only)

Features: optically isolated, zero-crossing
Switch voltage, maximum: 230VAC
Switch Current, maximum: 50mA@230VAC, 100mA@120VAC
Isolated from AC line
Peak repetitive surge current: 1 A (100ms, 120pps)
On-state voltage: 3v max, @ 100 mA
Off-state leakage: 500nA max.
Holding current: 250mA typical
Critical rate of rise of off-state voltage: 600v/us min.
Isolation surge voltage: 7500VAC min., 60Hz. 1 sec.
Turn-on time, full load, max voltage: 15ms max. (zero-crossing)
Turn-off time, full load, max voltage: 15ms max. (zero-crossing)
Over-current protection: internal fuse (non-replaceable, non-repairable)

Environmental

Operating Temperature Range: -25° to 60°C (-13° to 140°F)
Storage Temperature Range: -40° to 85°C (-40° to 185°F)
Operating Humidity: 100%, non-condensing
Protection Ratings: Type 1 (UL50), IP67

Agency Approvals

CE Mark: CE conformity is declared to:
EN55011:1998 Group 1, Class A
EN61010C-1
EMC: EN61326:1997 Measur., Lab., and Control
FCC Class A (USA)
UL61010C-1 "Industrial Control Equipment" File#E238344
FDA: Cables and over-mold are FDA compatible non-contact
Declaration of Conformity available upon request

Construction

Dimensions: (length x diameter)
152 mm (6.0 in) x 24 mm (0.95 in)
AC cable: 4-wire, 18AWG, 300V, PVC:
2 m (79.0 in) x 7 mm (0.28 in) dia.
DC cable: 4-wire, 22AWG, 300V, PVC
1 m (39.0 in) x 5.2 mm (0.21 in) dia.
Material: PVC
Input fusing: non-replaceable, non-repairable

Accessories

Model AC100

2-conductor transmitter connector cable, 3 m (10'), for all SM100 series Amphenol and SM700 series Amphenol connector-style, thru-beam transmitters

Model AC105

Straight, 7/8-16 mini, 4-conductor mating connector cable, 4 m (12'), used with SM500 family connector-style, prox sensors

Model AC105-50

Straight, 7/8-16 mini, 4-conductor mating connector cable, 15 m (50'), used with all SM500 family connector-style, prox sensors

Model AC107

Straight, 7/8-16 mini, 2-pin, 2-conductor mating connector cable, 4 m (12'), used with all SM100 series watertight and SM700 series watertight, connector-style, thru-beam transmitters

Model AC108

Straight, 7/8-16 mini, 3-pin, 3-conductor mating connector cable, 4 m (12'), used with all SM100 series watertight and SM700 series watertight, connector-style, thru-beam receivers

Model AC115

Straight, 7/8-16 mini, 5-conductor mating connector cable, 4 m (12'), used with SM552A-X7X series dual-level, connector style prox sensors with alarms, with SM554B-XXX series synchronized gate-controlled, connector-style prox sensors, and with SM556A-X9X series analog, connector-style prox sensors with alarms

Model AC115-50

Straight, 7/8-16 mini, 5-conductor mating connector cable, 15 m (50'), used with SM552A-X7X series dual-level connector-style prox sensors with alarms, with SM554B-XXX series synchronized gate-controlled, connector-style prox sensors, and with SM556A-X9X series analog, connector-style prox sensors with alarms

Model AC117

Right-angle, M12 micro, 4-conductor, connector/cable assembly with built-in LEDs, 5 m (16'), used with SM650 series and SM657 series miniature prox sensors and SM851 series miniature, connector-style, thru-beam receivers

Model AC118

Right-angle, M12 micro, 2-conductor connector/ cable assembly, 5 m (16'), used with SM850 series miniature, connector-style thru-beam transmitters

Model AC119

Right-angle, M12 micro, 4-conductor connector/ cable assembly, 5 m (16'), with built-in LED's, used with SM656 series miniature, connector-style analog prox sensors

Model AC127

Straight, M12 micro, 4-conductor connector/cable assembly with LED, 5 m (16') with LED's, used with SM650 series and SM657 series miniature, connector-style prox sensors and with SM851 series connector-style thru-beam receivers

Model AC128

Straight, M12 micro, 4-pin, 2-conductor, connector/cable assembly, 5 m (16'), used with SM850 series miniature, connector-style, thru-beam transmitters and SM850FP series miniature, flat-profile, connector-style thru-beam transmitters

Model AC129

Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), with LEDs used with SM656 series miniature, connector-style analog prox sensors

Model AC130

Straight, M12 micro, 4-conductor, connector/cable assembly, 5 m (16'), used with SM650FP, SM656FP, SM657FP, SM950, SM952, SM956, VM1, VM18, VM30 and CT1500 series sensors, connector style, and SM851FP series thru-beam receivers, connector style

Model AC132

Right-angle, M12 micro, 4-conductor connector/cable assembly, 5 m (16'), used with SM950, SM952, SM956, VM1, VM18, VM30 and CT1500 series sensors

Model AC134

Right-angle, M8 pico, 4-conductor connector/cable assembly, 5 m (16'), used with all SM350 series proximity sensors

Model AC135

Straight, M8 pico, 4-conductor connector/cable assembly, 5 m (16'), used with all SM350 series proximity sensors

Model AC136

Straight, 5-pin M12 micro connector/ cable assembly, 5m (16') O.D.V.A. compliant. Used with DeviceNet sensors.

Model AC137

Pico-to-micro pigtail adapter cable, 0.2 m (7.9"), used with all SM350 series proximity sensors

Model AC138

Pico-to-micro pigtail adapter cable with reversed output pins, 0.2 m (7.9"), used with all SM350 series proximity sensors

Model AC140

Mini-to-micro 4-conductor pigtail adapter cable, 0.2 m (7.9"). Used with all SM600 series proximity sensors.

Model AC141

Right-angle, M8 pico, 3-conductor connector/cable assembly, 5 m (16'), used with all SM330 and SM340 series proximity sensors

Model AC142

Straight, M8 pico, 3-conductor connector/ cable assembly, 5 m (16'), used with all SM330 and SM340 series proximity sensors

Model AC143

Right angle, M8 pico, 3-pin, 2-conductor connector/cable assembly, 5 m (16') for SM430 connector-style transmitters

Model AC144

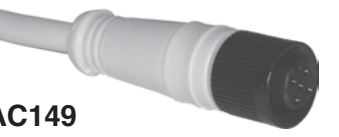
Straight, M8 pico, 3-pin, 2-conductor connector/ cable assembly, 5 m (16') for SM430 connector-style transmitters

Model AC145

Right-angle, M8 pico, 4-pin, 2-conductor connector/cable assembly, 5 m (16') for SM450 connector-style transmitters

Model AC146

Straight, M8 pico, 4-pin, 2-conductor connector/cable assembly, 5 m (16') for SM 450 connector-style transmitters



Model AC149

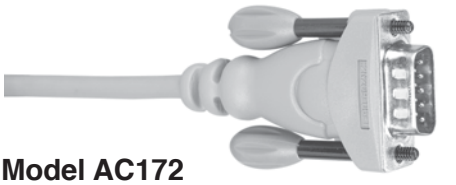
Straight, 5 conductor/cable assembly, 2 m (6.6"). Used with SM650 with "AA" option, SM652 with "AA" option, and SM900 series with connector and "AA" option.

Model AC150

3-conductor connector cable, 3 m (10'), used with all SM100 series Amphenol and SM700 series Amphenol connector-style receivers

Model AC160

Cable Grip used with all SM100 and SM700 series cable-style, thru-beam sensors



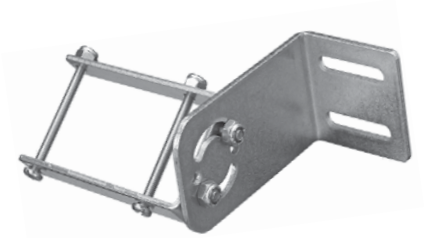
Model AC172

DB9, RS232 straight-through cable, 2 m (6'), used with Model AC441A.

Model AC201

Stainless, right-angle, single thru-beam-sensor mounting bracket, slotted for adjustment for all SM100 series and SM700 series transmitters and receivers and for CS107 Web Sensing System transmitter and CS108 Web Sensing System receiver

Model AC222



Standard, stainless mounting bracket assembly, slotted for vertical adjustment, used with all SM500 family prox sensors

Model AC213

Stainless and Teflon remote sensing probe mounting bracket, used with all SM500 family prox sensors and all SM700 series remote thru-beam transmitters and receivers

Model AC226

Stainless and polyamide conveyor-rail clamp/bracket set, used with all SM600 series miniature prox sensors and SM800 series 18 mm miniature thru-beam sensors

Model AC227

Large, right-angle, stainless mounting bracket used with all SM600 series miniature prox sensors and all SM800 series 18 mm miniature, thru-beam sensors

Model AC228

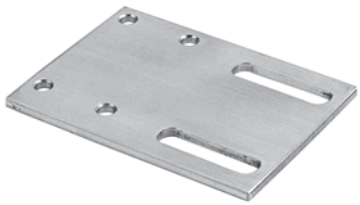
Small, right-angle, stainless, mounting bracket used with all SM600 series miniature prox sensors and all SM800 series 18 mm miniature thru-beam sensors

Model AC229

Plate-style, right-angle, stainless mounting bracket with base slotted for forward/reverse adjustment and side slotted for sensor adjustment, used with all SM500 family sensors

Model AC230

Three-piece, stainless mounting bracket assembly with O-ring mount used with all SM500 family sensors with remote heads



Model AC231

Straight, stainless, mounting bracket with side slotted for sensor adjustment, used with all flat-profile sensors.

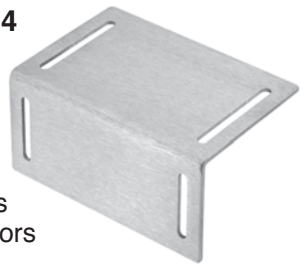
Model AC232

S-shaped, stainless, mounting bracket with base slotted for sensor adjustment, used with all flat-profile sensors

Model AC233

Small, right-angle, stainless mounting bracket with cable clearance slot, for all SM900 30 mm sensors.

Model AC234



Right-angle, stainless mounting bracket used with all CT1000 series counting sensors

Model AC235

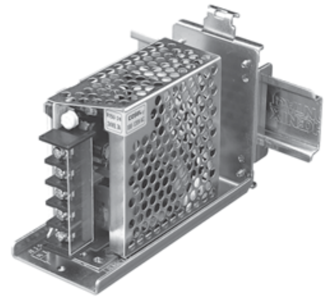
Right-angle, stainless, mounting bracket, used with all SM300 series 12mm proximity sensors

Model AC236

Stainless and polyamide conveyor-rail clamp/bracket set, used with all SM300 series 12mm proximity sensors

Model AC237

Straight, stainless mounting bracket, used with all SM300 series 12 mm barrel proximity sensors

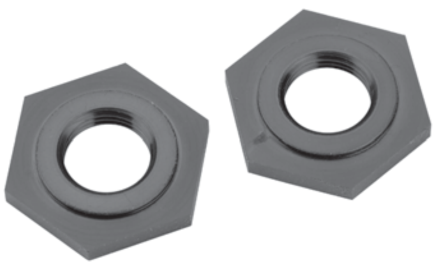


Model AC240

Straight, stainless mounting bracket, used with all SM600 series 18 mm barrel proximity sensors

Model AC241

Steel/black oxide, 45° angle, label edge mounting bracket used with SM6X7A-A08-01FP or SM6X7A-A08-11FP flat-profile label sensors



Model AC242

Pair of hex nuts for adapting all 12 mm diameter SM300 series proximity sensors to 18 mm diameter mounting bracket

Model AC243

Pair of hex nuts for adapting all 12 mm diameter SM300 series proximity sensors to 30 mm diameter mounting bracket

Model AC244

Pair of hex nuts for adapting all 18 mm diameter proximity sensors to 30 mm diameter mounting bracket

Model AC246

Right-angle, stainless mounting bracket, used with all SM300FP flat-profile series proximity sensors

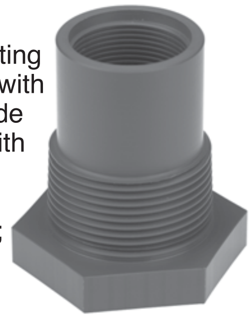
Model AC247

Stainless and polyamide conveyor rail clamp / bracket set, used with all SM300FP series proximity sensors

Model AC250-n

Tank sensor mounting reducer, available with four different outside diameters; used with all SM900 family sensors.

n = 1 (1 1/4" NPT);
n = 2 (2" NPT);
n = 3 (3" NPT);
n = 4 (4" NPT)



Model AC251-n

Tank sensor mounting flange available in three different pipe thread diameters, furnished with matching AC250 tank sensor mounting reducer; used with all SM900 family sensors.

n = 2 (2" NPT x 6" dia.);
n = 3 (3" NPT x 7.5" dia.);
n = 4 (4" NPT x 9" dia.)

Model AC439

24 VDC Power Supply, 700 mA Load capacity with AC and DC screw terminals; used with all DC-powered Hyde Park sensors

Model AC443 Sensor Power Pack

Provides 18VDC power for most sensors via M12 connector. Provides discrete on-off and variable analog indication. Includes pushbutton for limit/span setting of VM1/18/30/80 sensors.

Model AC441A HandHeld Configurator

Used without a computer to set window and span limits of 30 mm discrete and analog sensors, and to display object distance. It's used with a computer to configure SC model sensors using SUPER-PROX+ software:

AC441A - Configurator without P/S
AC441A - 1 includes AC P/S, S/W
AC441A - 2 includes UK P/S, S/W
AC441A - 3 includes Eur P/S, S/W
AC441A - 4 includes Aus/NZ P/S, S/W
AC441A - US includes P/S, S/W, AC130 cable, AC172 RS-232 cable

Model PB100

In-line accessory push-button for teaching window limits for Virtu series sensors.
