PTC IGBT Driver Reference Design

ON Semiconductor®

REFERENCE DESIGN

Introduction

This document is the entry point to the reference documentation of PTC heater discrete IGBT driver board evaluation platform, version 1.0.1.

The evaluation platform is for thermal performance evaluation that provides developers with the tools and test data needed to build applications that drive PTC based on high current isolated driver and IGBT from On Semiconductor.

This documentation focuses on the output voltage and current adjustment through high side and low side IGBT, and would help user to setup different variables, such as voltage, to get the wanted current and get the wanted test condition. Finally, it will help customer better understand isolated driver and IGBT performance by tested data and curve.

SPECIFICATION

Device Series	Application	Input Voltage	Output Power	Topology	I/O Isolation
NCV57000 / FGH40T65SP_F085 / NCV8871X / NCV2700X	PTC heater / /Auto / Industry	200 Vdc ~ 400 Vdc	1.8 kW	High/low side driver Isolated Power supply	Yes

OTHER SPECIFICATION

|	
Output Voltage	Max 380 Vdc (Depends on IGBT)
Max Current	40 Arms
Minimum Efficiency	Depend on the PTC system
Operating Temp. Range	−10 – 125 °C
Cooling Method	Air conditioning water circulation system
Signal Level Control	GPIO / PWM

Overview

This note will address the following topics 1) explanation of circuit 2) explanation of software and 3) thermal test result. The complete bill of materials and schematics are also included.

CIRCUIT DESCRIPTION

1) PTC driver board is made of a set of components that are isolated to provide a reliable working condition based on high−low power system.

- High−current single channel IGBT driver with internal galvanic isolation, designed for high system efficiency and reliability in high power applications
- Two phases output, flexible switch frequency: 100 Hz~16 kHz
- Low Saturation Voltage using Trench IGBT with Field stop Technology

- Below 500 V battery system
- Key components support AEC−Q100/101
- Rail−to−rail output operation, 3 MHz bandwidth high speed Op−Amp
- Adjustable output non−synchronous boost controller which drives an external N−channel MOSFET
- Easy for customer to qualify and evaluate whole performance

PTC Heater Module
- Input Max Power 1200 W
- Appearance Size 242 mm × 132 mm × 65 mm

Figure 5. PTC Heater

1.2 kW DC Source

- Voltage output range: 0 – 600V
- Current output range: 0 – 8A
- Accurate Voltage and Current Measurement

Figure 6. DC Source

Isolated High Current and High Efficiency IGBT Gate Driver NCV57000

- High Current Output(+4/−6 A) at IGBT Miller Plateau Voltages
- Short Propagation Delays with Accurate Matching
- DESAT with Soft Turn Off
- Active Miller Clamp and Negative Gate Voltage
- 5 kV Galvanic Isolation
- AEC qualified

Non−Synchronous Boost Controller, Automotive Grade NCV887100D1R2G

- Peak Current Mode Control with Internal Slope Compensation
- 1.2 V 2% Reference voltage
- Wide Input Voltage Range of 3.2 V to 40 Vdc, 45 V Load Dump

- Input under−voltage lockout (UVLO)
- Internal Soft−Start
- Low quiescent current in sleep mode
- Cycle−by−cycle current limit protection
- Hiccup−mode short−circuit protection (SCP)
- Thermal shutdown (TSD)

Operational Amplifier NCV20071SN2T1G
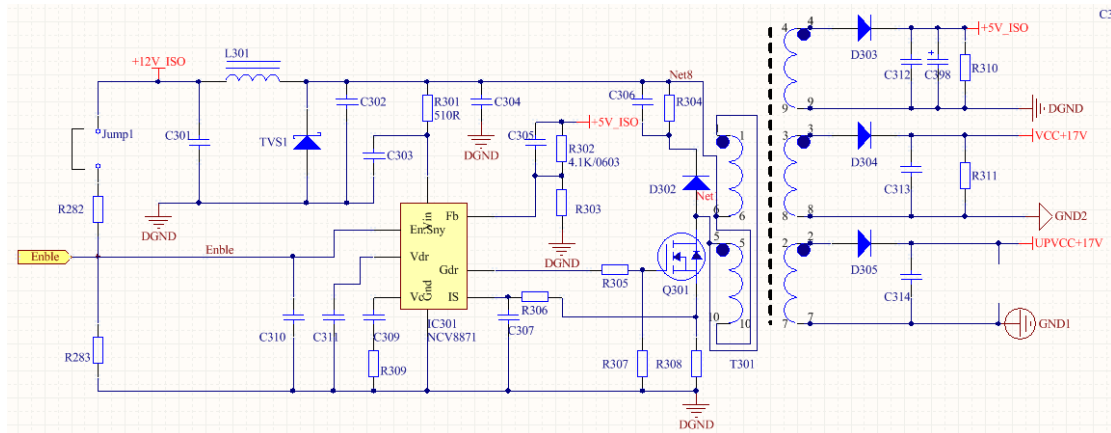

- QR Frequency Jittering to Reduces EMI Signature
- New Quiet−Skip Technology Ensures Operation Outside Audible Range
- Integrated HV Startup with Brownout Protection Provides an efficient power−on source and protects ageists drops in input mains voltage
- Valley Switching Operation with Valley Lockout. Maximizing the efficiency over the entire power range

- Integrated X2 Capacitor Discharge Capability Eliminates the need for a X2 resistors
- NTC Compatible Fault Pin Extra protection against high temperature or other fault conditions
- High Drive Capability: −500 mA / +800 mA Enables faster switching of primary−side MOSFET
- Latch input for OVP and OTP implementations Simple implementation of required protection functions

2) Another key element of the evaluation board is to simulate and realize the driver algorithm. At least it needs 3 GPIOs or PWM port to driver one high side IGBT and two low side IGBT.

TEST RESULT

3) Thermal results

- Input Max Voltage: 100 Vdc ~ 320 Vdc
- Switching frequency: 16 kHz
- Control battery input: 12 Vdc
- T_j: ≤ 150°C

- Ta: 25°C
- Output Power: 1.2 kW
- Heater water container volume: 3 L
- Water pump model: DKB80A−12
  12 VDC, 30 L/Min, 80 W
